Murray had confirmed on Sept. 29 that about two months earlier, Snyder and his office worked with a corporate donor who wanted to remain anonymous to provide 1,500 faucet filters to a Flint area group of pastors, who helped distribute them.

"The administration has worked closely with the Concerned Pastors group on the water issue, and the members are passionate about supporting their parishioners and the Flint community as a whole," Murray said at the time. "We certainly share their concern that everyone in Flint should have safe, clean water. Flint water does meet state and federal safety standards. People have complained about the color and the odor, and faucet filters will help with those challenges, as well as improving water quality overall."

Murray said Tuesday that Hollins began meeting with the pastors in May when the water concerns related to color and odor, not lead.

"The pastors asked the administration to help with the filters, to help alleviate concerns with the color and odor," Murray said. "We secured the filters from two corporate donors. The two corporate donors specifically asked not to be names publicly. So, we honored that request."

DETROIT FREE PRESS

Should Flint residents pay for lead-poisoned water?

Also on Sept. 29, Snyder was asked by the Free Press if he thought lead in the drinking water was behind an apparent spike in blood levels in Flint children, and he declined to give a direct answer.

"During the course of the week or early next week we hopefully will be coming out with more public action steps," some of which are already under way, and others to be implemented, Snyder said.

"I take it as a serious issue; the Flint water situation," Snyder said in Lansing. "Lead is a serious issue, so again, we're spending a lot of time and effort looking at this and trying to partner with the people in Flint on that issue."

The Rev. Alfred Harris, Sr, president of the group of concerned pastors who have been agitating over the Flint drinking water problem, said Tuesday that in light of the Muchmore e-mail, Snyder "had to have known" there was a problem sooner than Oct. 1. But like Overton, Harris said he believes City of Flint officials at the time were minimizing the issue.

"The concerned pastors were out there 18 months ago when people first started to complain," Harris said. "The people were not believed, and that did not ignite the magnitude of an investigation that should have taken place at that time."

While faulting Snyder for not ordering a more thorough investigation, Harris said he believes Snyder would have acted sooner had he received better information.

Now, Flint needs to be declared a disaster area, not just in a state of emergency, in order to secure the billions of dollars in infrastructure and health funds that will be needed to address the problem, through federal aid, Harris said.

Michigan legislature returns this week; 3 things we'll learn in January

MLive – January 11, 2016 – By Emily Lawler

LANSING, MI -- The legislature is back on Wednesday and Lansing is already abuzz for a busy 2016.

Related: Marijuana, LGBT protections and prevailing wage? 16 issues to watch in 2016

Here are a few things we'll learn in the coming weeks:

1: What Gov. Rick Snyder plans to focus on this year

Gov. Rick Snyder is set to deliver his annual State of the State address on Jan. 19 at 7 p.m. in the House of Representatives chamber. In past years he's used the address to set priorities and unveil ideas for the new year.

In 2015 his speech focused on combining the Department of Human Services and Department of Community Health into the Department of Health and Human Services and getting Michiganders on something he called the "River of Opportunity." Roads were also a focus.

2: What kind of tax revenue Michigan can expect

The state's best economic officials meet twice per year at the Consensus Revenue Estimating Conference to determine what revenue the state can expect in the coming years. It's a guide to legislators as they start forming a state budget.

The Senate Fiscal Agency has already projected a slight revenue increase in Fiscal Year 2016, which runs from Oct. 1, 2015 to Sept. 30, 2016.

3: If the legislature will consider follow-up election bills

Gov. Rick Snyder signed a bill that eliminated straight-ticket voting and another that made sweeping changes to campaign finance law. In both instances he asked legislators for follow-up legislation. A bill to allow secure no-reason absentee voting should accompany the straight-ticket voting elimination, he said. He also called for clarification on the campaign finance bill with a provision that bans public officials from distributing information in certain ways 60 days ahead of an election.

Senate leadership has already expressed opposition to the secure, no-reason absentee voting bill. It would have to reverse that position and consider the House-passed bill to make it law.

Some individual lawmakers have expressed a desire to clarify the 60-day ban on information ahead of elections.

Sen. Marty Knollenberg, R-Troy, in a statement released Monday said "One thing is for certain, the language isn't as clear as it could be and warrants revisiting."

Michigan Police Delivering Water Door-to-Door Amid Contamination Crisis

ABC News – January 12, 2016 – By Gillian Mohney

Michigan State Police began delivering clean and safe water door-to-door in Flint today after Gov. Rick Snyder declared a state of emergency for Genesee County a week ago.

The state action comes after Flint issued its own state of emergency last month because of a change in the city's water source that has exposed children to potentially dangerous levels of lead, officials say.

Flint Mayor Karen Weaver has called the crisis a "man-made disaster caused by the city switching to the Flint River as a water source."

As a result, water resource teams, including Michigan state police and other state personnel, started distributing bottled water, water filters, replacement cartridges and testing kits to residents. There are also sites where residents can pick up clean donated water.

"We recognize the urgency of getting water resources to the residents of Flint," Capt. Chris Kelenske, deputy state director of Emergency Management and Homeland Security and commander of the Michigan State Police Emergency Management and Homeland Security Division, said in a statement Monday. "To help ensure the necessary resources continue to be available at the water resource sites, the state is expanding their partnership with the American Red Cross to utilize their warehousing and inventory management capabilities for stored water resources."

Nicole Lisabeth, a spokeswoman for the state police, who are running the Michigan Joint Information Center, said she didn't have details about the water deliveries, adding "we're looking into all options that may include a federal request [for emergency assistance] but don't have a definitive request."

The trouble began in 2014 when the city disconnected from Detroit's water supply and began drawing its water from the Flint River. It was intended as a stop-gap measure until the completion of a pipeline to Port Huron Lake as the source for Flint's water.

But the river water wasn't treated properly, a state spokeswoman told ABC News in an earlier interview, so it drew lead from the pipes into the water supply.

"This switch has resulted in elevated lead levels in drinking water, which prompted both the city and the County Health department to issue a health advisory earlier this year," the mayor's office said in a statement last year.

The city realized savings of about \$4 million annually by using the Flint River, according to The Associated Press.

The city switched back to the Detroit water supply last year but the lead levels remain higher than acceptable because the chemicals used to treat the water have not fully stopped the water from leaching lead from the pipes, a state spokeswoman told ABC News last month.

City and state officials have come under fire from residents for the perceived slow response to the water supply crisis. Dr. Mona Hanna-Attisha, a pediatrician at Hurley Medical Center in Flint, Michigan, said the effects of the crisis could show up decades later.

"We see the consequences of lead poisoning a lot later," Hanna-Attisha, told ABC News last month. "In five years we're going to see kids with developmental delays and will have to be in special ed ... in 15 years they'll have problems with behaving."

As for declaring a state of emergency, doing so may help get federal funds and assistance for future programs and therapies aimed at helping children exposed to the lead, a Michigan Department of Health and Human Services spokeswoman told ABC News last month after the city's declaration.

Gov. Snyder Monday announced the creation of the Flint Water Interagency Coordinating Committee, aimed at developing solutions for long-term problems associated with the water crisis.

"We need to focus on improving Flint for the longer term," Snyder said in a statement. "This committee, made up of experts from government and the Flint community, will set a course of action to remedy the water situation and resulting health issues, and carry on long after the emergency declaration expires."

Maybe Michigan is a case study for new executive actions on guns

Crain's Detroit Business – January 12, 2016, By Chad Halcom

If you are in no frame of mind to hold a job, does that affect whether you are in any frame of mind to hold a gun?

That might soon become the operative question for millions of Americans, including nearly 250,000 Michigan adults, after the White House last week announced a series of executive actions aimed at curbing gun violence and improving public safety. A key piece of this strategy is several new measures to improve mental health history reporting the National Instant Criminal Background Check System, created to keep firearms out of the hands of ineligible buyers attempting a purchase. That system has prevented more than 2 million guns from getting in the wrong hands since its inception, according to the federal **Bureau of Justice Statistics**.

Among the new measures is a new rule-making process forthcoming from the **U.S. Social Security Administration** to report "appropriate information" from its records to the NICS system. That includes data on roughly 75,000 people per year who have a documented mental health condition, receive disability benefits and are unable to manage those benefits because of their mental impairment, or who are found legally incompetent in court, the White House said.

In Michigan, almost 146,000 of the 410,000 people who collect benefits from the Social Security Disability Insurance Trust Fund, or about 36 percent, of all state beneficiaries have been diagnosed with a mental health disorder, according to data from a 2014 annual statistical report on the disability program.

You might recall that *Crain's* reported extensively on the dramatic surge in Michigan disability benefits over the last 10 years last July (before the latest annual report, for 2014, was released in September). A separate report on the Supplemental Security Income program, which pays benefits to more asset-constrained disabled people and is not tied to work history, indicates about 60 percent of the 230,000-plus recipients have a diagnosed mental health condition.

The White House statement last week suggests SSA will be preparing fairly stringent standards for disability records that would be flagged in a NICS check, rather than just depositing all beneficiaries' records in the background check system. It will also create a mechanism for a buyer to get relief from a mental health prohibition, but it's not yet clear what the standard or the relief measure will be and how many people will be affected.

The administration is also proposing a new \$500 million investment to help improve care and care access for the mentally ill, and the **U.S. Department of Health and Human Services** issued a new rule that will authorize states and other agencies covered by the federal Health Insurance Portability and Accountability Act, or HIPAA, of 1996 to share information with NICS about people who might be ineligible to buy a gun on mental health grounds. Also among the executive actions was a measure to crack down on guns from being purchased by a corporation or a trust, a measure that might allow some owners to bypass the sticker background checks.

But will fear of getting flagged in a background check also deter people from applying for disability when they're eligible, or getting a much-needed diagnosis and treatment for a mental health condition?

Possibly. The coalition Mayors Against Illegal Guns found in a 2011 report on gaps in various states' reporting of data to the federal background system that Michigan was one of the five highest-performing states in the country for records submission to NICS with nearly 100,000 records submitted. Whether coincidentally or not, Michigan also ranks in the bottom five states by guns owned per capita, according to data compiled by Bloomberg.

The Great Lakes state, incidentally, also accounts for more than 4 percent of all beneficiaries of the federal disability program, even though it only accounts for about 3 percent of the nation's population. Also, about 4 percent of all Michigan adults per year reported having a serious mental illness in the past year between 2008 and 2012, according to a 2015 report by the **Michigan Department of Health and Human Services**. That would come out to more than 246,000 adults ages 18-64, according to SSA data, who may or may not have records in the federal NICS system.

Presumably the endgame of all the new executive actions is keeping guns away from dangerous people. So maybe it's not the people who are willing to admit they have a problem, who become the problem.

World's second largest crime occurs in Michigan

Hillsdale Daily News – January 12, 2016, By Lonnie Robinson

Hillsdale, Mich. – A Jan. 7, Michigan Attorney General press release titled "Schuette Recognizes National Human Trafficking Awareness and Prevention Day" states, "In a continuing effort to identify and rescue thousands of children and adults trapped in the forced sex and labor trades, Michigan Attorney General Bill Schuette today recognized January 11 as National Human Trafficking Awareness and Prevention Day ... educating the public to notice and report suspected cases of human trafficking is a vital part of saving lives."

A slide show presented by a Michigan Attorney General website indicates that human trafficking is the second largest and fastest growing crime worldwide, second only to drug trafficking. It is a \$32 billion industry worldwide, and it is occurring more and more in Michigan.

Another Michigan Attorney General website states, "Around the country, and right here in Michigan, men, women and children are forced into prostitution, domestic servitude and other labor for little or no pay ... Attorney General Schuette is leading the fight against this horrific crime by prosecuting the state's first-ever criminal cases under state law banning human trafficking in Michigan ... Victims of human trafficking are in bondage through force, fraud or coercion ... Our children are especially at risk — 40 percent of human trafficking cases involve the sexual exploitation of a child."

Many of these exploited children are 12 to 14 years old.

A United States Office of Health and Human Services, Office of Trafficking in Persons publication titled "What is Human Trafficking" describes that many human trafficking victims remain in bondage to their controller because they owe their controller a significant amount of money. Controllers may also keep money away from a victim, claiming that they are keeping the victim's money safe.

Victims are usually isolated from their families, cultural groups and prohibited from going out into public places by themselves. Victims frequently have their passports, visas or other identification documents confiscated by their controller and the controller tells the victim that if the victim contacts the legal authorities, the authorities will send the victim to jail for not having a passport or identification papers. The threat of violence toward the victim or the victim's family can also keep the victim submissive to the controller.

Michigan Attorney Bill Schuette has charged 11 people in Michigan for human trafficking. Additionally, during October 2015, the FBI rescued 19 underage victims and arrested 12 pimps in the Detroit Metro area.

In the 2013 "Report on Human Trafficking," created by the Michigan Commission on Human Trafficking, Michigan Attorney General Bill Schuette stated, "Every day, the horror of human trafficking is perpetrated by profit-seeking predators who exploit children, women and men for sex and labor services. Increasingly, traffickers conduct their illicit operations in Michigan ... We have seen victims robbed of their childhood, their dignity, their health, their families and even their lives ... it is not just a problem for the world, it is a problem for Michigan ... Human traffickers take advantage of technology to remain anonymous and keep their victims hidden in the shadows ... I pledge the full force of the Department of Attorney General to take the lead in these efforts (the efforts to stamp out human trafficking in Michigan)."

State Representative Kurt Heise, co-chairman of the Michigan Commission on Human Trafficking, states in the 2013 Report on Human Trafficking, "In fact, we (Michigan) have become a focal point for this crime, given our international border and location along major national highways ... The Detroit area ranked second in the nation in the number of arrests (for human trafficking). This crime is here and now in our (Michigan) communities."

This 2013 report states that professionals working in many professional fields in Michigan will probably fail to recognize the indicators of human trafficking. Also, most Michigan citizens have no idea that human trafficking occurs in Michigan, so they will probably not recognize it. Therefore, there needs to be a major educational campaign in Michigan regarding how to recognize human trafficking and what to do about it.

This 2013 report acknowledges that there have been significant gaps in Michigan law and gaps regarding how Michigan authorities react to possible human trafficking in Michigan. Michigan also has a lack of help and support services for victims rescued from human trafficking, such as not having enough adequate safe harbor homes for victims.

The 2013 Report on Human Trafficking states that during a recent two-year period, there were more than 300 known cases of human trafficking in Michigan. This included such things as selling children for sex at truck stops. Also, victims are required to participate in prostitution, exotic dancing, pornography, and transporting drugs for the controller.

The United States Department of Justice, National Institute of Justice, states that the majority of human trafficking rings operate from private homes and out of sight from the community and the police. Victims are frequently moved from one location to another to avoid detection by the police. The Internet is also used by controllers in order to remain hidden and out of sight.

The United States Department of Health and Human Services, Office of Refugee Resettlement, reports that human trafficking victims may have bruises, broken bones, burns, brandings, scarring, hearing problems, skin problems, infectious diseases such as hepatitis, HIV, urinary tract infections, sexual assault injuries, and have a history of forced abortions.

According to the behavioral descriptions given in the American Psychiatric Association, Diagnostic and Statistical Manual of Mental Disorders, and by researchers such as Erin Williamson, Nicole Dutch and Heather Clawson Caliber, who researched human trafficking for the United States Department of Health and Human Services, and then published their research titled "Evidence-based Mental Health Treatment for Victims of Human Trafficking," human trafficking victims can display intense fear, helplessness, horror, post-traumatic stress disorder, other serious mental disorders, and signs of inappropriate substance (e.g., drug) usage.

Column: Mental health services get needed boosts

The Detroit News – January 12, 2016, By Ben Y. Robinson

Standing alongside Mark Barden, a father who lost a child during the shootings at Sandy Hook Elementary School in 2012, President Barack Obama recently outlined executive actions intended to reduce gun violence in our nation while rightfully allocating millions of dollars to mental health services.

Since Sandy Hook, we have been frequently reminded in the nightly news of individual emotional fragility, and possible mental illness, whenever gun violence erupts in our communities. When these shootings occur, there is often a quick judgment and individuals with mental illness are scapegoated as the likely perpetrators.

Such episodes heighten awareness of mental illness and the need for compassionate programs of intervention and care. But the fact remains that those who suffer with mental illness are more often on the receiving end of violence than the other way around. Still, some progress is being made.

Excellence in mental health act

On the national front, the president's approval of the 2016 budget bill includes a \$400 million boost to mental illness programs, including the largest increase to research at the National Institute for Mental Health since 2012. The budget adds \$50 million for services at the Substance Abuse and Mental Health Services Administration, and a \$255 million increase for veterans mental health.

There's also positive action in Michigan to extend mental health care to more Michigan citizens.

U.S. Sens. Debbie Stabenow, D-Lansing, and Roy Blunt, R-Missouri, plan to introduce legislation to boost funding to expand community mental and behavioral health services across the country. That bill would fund mental health planning grants in 24 states, and Michigan is included, through their 2014 Excellence in Mental Health Act. Under the current law, funding is limited to just eight states.

The act will provide access to community mental health and substance abuse treatment, while improving Medicaid reimbursement for these services. When fully implemented, it would add more than \$1 billion to spending for behavioral health.

There also have been large steps made toward integrating and advancing a comprehensive approach to physical and behavioral health for Michigan citizens. Our state's adoption of the Healthy Michigan (Medicaid) program has extended health care, including a psychiatric care component, to 600,000 more residents. Moreover, the federal government recently issued the waiver needed to continue Michigan's implementation of expanded Medicaid.

With Lt. Gov. Brian Calley as point person for the administration, Michigan Department of Health and Human Services Director Nick Lyon are working to implement many of the 60 recommendations put forth by the Mental Health and Wellness Commission.

What remains to be done?

The fuller answer relates to dollars, people and attitudes. We must continue to advocate for necessary funding for mental health awareness, early intervention and quality care. Much of this is technical, which means paying attention to line items in the state's budget for the public sector and advocating for meaningful coverage and reimbursement by insurers in the private one.

Simultaneously, we must care for those in need through well-trained mental health professionals, caseworkers, support staff and volunteers, in both the public and private sectors.

Crucially, we must work through the "violence" in our society, including family structures and relationships that prevent vulnerable individuals from receiving help. Entrenched myths about mental illness need to be debunked. In doing so, our entire community will gain strength and better health while keeping the hope that atrocities like Sandy Hook never happen again.

Ben Robinson is president and CEO of Rose Hill Center, a treatment and rehabilitation facility that helps mentally ill adults regain control of their lives.

OK2Say received more than 2,000 student tips in 2015

Holland Sentinel – January 12, 2016

Holland, Mich – Michigan Attorney General Bill Schuette and Michigan State Police Director Col. Kriste Kibbey Etue announced the 2015 results of the OK2Say student safety program.

In 2015, the school safety initiative generated over 2,165 tips in 30 categories, including 536 tips on bullying, 396 tips on suicide threats, 261 tips related to depression or academics, 252 tips on cyberbullying and 158 tips regarding self-harm.

"The results show OK2Say is making a difference for Michigan kids. We have stopped violence, saved lives and helped make it a little easier for students across Michigan to walk through the hallways at school," said Schuette. "OK2Say is one more tool in a school's safety box. We will continue our commitment to building a responsible and safe culture for all Michigan students."

"The Michigan State Police is pleased to find that as more students learn about the OK2Say program, more students are using it," said Etue. "All tips are taken seriously; nothing is too small or insignificant to report."

More than 1,000 OK2Say presentations reached 130,000 students across Michigan in 2015. Eighty-six percent of the presentations were done in schools with students in grades 6-12. Other presentations were held at communitywide events.

OK2Say is a student safety initiative operated through a partnership between the Department of Attorney General, Michigan State Police, state agencies, schools, parents, law enforcement and community leaders available to Michigan students in grades K-12 and enables students to confidentially report potential harm or criminal activities aimed at students, teachers, staff or other school employees.

OK2Say is modeled after Safe2Tell, a Colorado program started after the 1999 Columbine incident. In Safe2Tell's first year of operation, only 100 tips were reported; Michigan has received 20 times that number in the same time period.

OK2Say includes four key features. The first is confidential reporting. State law protects the confidentiality of the reporter's identity. The identity of the reporting party will not be disclosed to local law enforcement, school officials or the person against whom a tip is offered, unless the reporter voluntarily chooses to disclose his or her identity. However, to address any false reports to the program, prosecutors do have authority to seek a court order to review records when investigating false reports.

The second feature is comprehensive technology. OK2Say is operational 24 hours a day, seven days a week, every day of the year. The program accepts tips by phone, text message, email, mobile application and website form, accessible at mi.gov/ok2say. Photos, videos and links to additional information are encouraged.

The third is coordinated intervention. Upon receipt of a tip, trained OK2Say operators at the Michigan State Police address the immediate need and, as necessary, forward the information to the appropriate responding law enforcement agency or organization. Tips go to schools, local law enforcement agencies, community mental health agencies or the Michigan Department of Health and Human Services.

The fourth feature is accountability and complete disposition. To ensure tips are acted upon, agencies receiving tips are required to submit outcome reports to the Department of Attorney General. An annual report on the program's impact will detail the types and numbers of tips handled throughout the year. The 2014 report is available on the attorney general's website.

Students, teachers, parents, school officials, friends and neighbors can all submit tips if they are aware of a threat in school. To submit tips, call 855-565-2729, text 652729 or email OK2SAY@mi.gov.

Snyder activates National Guard to help in Flint

Detroit Free Press – January 13, 2016, By Paul Egan

LANSING — Gov. Rick Snyder on Tuesday night activated the Michigan National Guard to assist with the ongoing crisis of the lead contamination of Flint's drinking water.

"As we work to ensure that all Flint residents have access to clean and safe drinking water, we are providing them with the direct assistance they need in order to stretch our resources further," Snyder said in a news release late Tuesday. "The Michigan National Guard is trained and ready to assist the citizens of Flint."

Members of the National Guard are expected to staff fire stations and distribute bottles of water and water filters, freeing members of the American Red Cross to handle the door-to-door distribution of those items, Snyder Chief of Staff Jarrod Agen said. There were no immediate plans to use tanker trucks to distribute water, he said.

[DETROIT FREE PRESS](#)

[Flint filter delivery casts doubt on what Snyder said](#)

The Guard was last activated in Michigan in 2012 to assist with the Duck Lake Fire.

Some National Guard members will get to Flint Wednesday and the number deployed is expected to increase to more than 30 by Friday, Ajen said.

Snyder also on Tuesday asked the Federal Emergency Management Agency to coordinate responses to the Flint crisis by other federal agencies.

"This request will identify federal agencies that have programs, authorities and/or technical expertise that could be utilized in the ongoing response and recovery efforts in Flint to be made available," according to a statement issued by the governor's office.

"Such federal agencies may include the Department of Health and Human Services, Environmental Protection Agency, Department of Housing and Urban Development, and Army Corps of Engineers."

Snyder issued the executive order to mobilize the Guard amid ongoing criticism that he and his administration have moved too slowly to respond to the crisis. The request for a larger role by FEMA stops short of asking for federal financial aid, which Snyder officials have said requires more time.

Rafael Lemaitre, FEMA's director of public affairs, said on Twitter the agency has approved Snyder's request for additional help and has appointed a federal disaster recovery coordinator to support Michigan's efforts.

Flint's drinking water became contaminated with lead in 2014 after its supply source was switched from Lake Huron water treated by the Detroit Water and Sewerage Department to water from the Flint River treated at the city water treatment plant.

Immediate complaints about the odor, smell and taste of the water were downplayed and largely ignored by the state before the Department of Environmental Quality acknowledge in October it had failed to require the addition of needed corrosion control chemicals, resulting in lead leaching from pipes and fixtures into the water.

[DETROIT FREE PRESS](#)

[In Flint, report that raised flags on lead went ignored](#)

Lead causes permanent brain damage in children and is linked to other health and behavior problems.

Snyder declared a state of emergency in Flint and Genesee County on Jan. 5. On Tuesday, the Michigan State Police and other officials began distributing bottled water and water filters to remove lead, door-to-door in Flint. The state also has urged all Flint parents with children younger than 6 to have their childrens' blood tested for exposure to lead.

The latest moves, though welcomed by advocates for Flint, did not halt criticism of Snyder's emergency response.

DETROIT FREE PRESS

Whistle-blower Flint doc to lead team to aid kids

"I trust that the good men and women of the National Guard will jump start the Snyder administration's lackluster response to this public health crisis," Senate Minority Leader Jim Ananich, D-Flint, said in a news release.

"Sadly, myself and many leaders of my community have advocated for this type of response for months."

U.S. Rep Dan Kildee, D-Flint, said the moves were overdue and renewed his earlier calls for a request for federal financial aid for Flint, "due to the lack of a sufficient response from the state."

Abbey's journey: 3 states + 6 foster homes = new life in Michigan

MLive – January 13, 2016, By Anya Rath

HOLLAND, MI -- As she struggled to put in her silver turtle earrings - her first new pair since getting her ears pierced a couple months ago - Abigail Morrow had a look of fierce determination on her face.

"Do you want me to help?" asked Terrie Morrow, her adoptive mother.

"No, I'm gonna get it," replied Abbey, 10, as she focused on her task, biting her lip.

After a few more moments of finagling, the post slid into place. A look of satisfaction spread across Abbey's face. Morrow congratulated her on this small, yet new, milestone in her life.

It was a chance for Abbey to take charge of her situation -- something she's not very acquainted with.

Abbey's short life has been punctuated by a series of struggles, many out of her control.

Since she was 2, Abbey had been in the foster care system, passed from home to home, her anger and resentment growing with each temporary stop.

But those handoffs stopped last fall, when she was officially adopted by Terrie and Calvin Morrow. The little girl's eight-year search for a forever home ended in Holland, and her new parents say she's beginning her journey of finding love again.

"We call her story the 'Abbey Road,'" Terrie Morrow said. "Evidence and proof that God searches for us and fights for us."

Fostering anger

Abbey's earlier behavior issues marked her as one of Tennessee's worst cases in their foster care system, Terrie Morrow said.

The child's anger stemmed from a sadness and general distrust that had only grown over the years. She had been in at least six different foster homes and had spent a year in two different residential treatment centers -- when she was just 6 and 8 years old.

"(She was) a little girl who had more than 22 people in the role of mom and dad in her life," Terrie Morrow said. "So she trusted no one."

At one of the first homes Abbey was placed in, she and her brother were both adopted. But the couple later decided the arrangement with Abbey wasn't working out. Without getting the opportunity to say goodbye to the family she had stayed with for three years, Abbey was whisked back into the system.

A few stops later, and Abbey was on her way to becoming a foster care statistic. The older a child gets, the harder it is for them to be adopted.

According to data from Michigan Department of Health and Human Services, 1,283 children ages 5 and younger were adopted in fiscal year 2014.

It's a big difference compared to the 578 children ages 6 to 10 who were adopted in 2014. The numbers only continue to dip the older the children become.

Bob Wheaton, communications manager for DHHS, said there is a greater need for adoptive homes for older children because most families look for younger children, or mistakenly believe older children are closer to independence and therefore don't need to be adopted.

"It's important for youths of all ages to have the stability of a permanent family and a sense of belonging to a family," Wheaton said in an email.

Fighting through red tape

The Morrows entered Abbey's life in 2013, when she was placed as a foster child with their newlywed daughter and son-in-law in Tennessee.

Because the young couple were not emotionally equipped to deal with such intense behavioral issues, Abbey was moved from their home as well.

Before she was removed, the Morrows would drive down to visit the family and Terrie Morrow, who works with emotionally impaired children in Caledonia schools, developed a close bond with Abbey through craft projects.

After Abbey was taken away, Terrie Morrow said she was unable to get the girl out of her mind, praying every day that the child found a home.

From the moment Abbey left her daughter's home, Terrie Morrow wrote in her Bible daily to keep a spiritual connection with the girl.

"I wanted her to be able to see that I thought about her every day," Terrie Morrow said.

The couple wanted Abbey in their home in Holland to give her a stable place until she was adopted. They contacted any authority who might help in their endeavor and tried to keep track of Abbey as she worked her way through Tennessee's foster care system.

But it was difficult fighting through layers of paperwork and red tape. They would often lose her.

"We were trying to get it expedited because she was a child left with nobody," Terrie Morrow said. "Nobody to visit her, nobody to pursue her."

They eventually found her in a residential treatment center for boys in Georgia. She was the only girl living there.

The Morrows began making efforts to be her foster parents, but ran into another wall because they were not licensed for the job.

It was another year and a half before Abbey could come to their home in August 2014.

Change of pace

Before Abbey was pulled into their lives, Terrie, 58, and Calvin, 66, were enjoying their empty-nest years. Calvin Morrow had retired and their two children were in their thirties.

"Life was full of peace and quiet," Terrie Morrow said. "That was suddenly turned upside down by a little girl."

The first year Abbey was in their home, where their son Nick Morrow also resides, it was tumultuous. Her tantrums were extreme.

"Her overwhelming sadness in her little heart intersected our joy," Terrie Morrow said. "When those two things intersected -- that's when the battle began."

The Morrows felt inevitable frustrations at having to give up their freedom. All of their energy and attention was suddenly shifted to a furious child who packed a deluge of traumatic experiences in her memory.

Terrie Morrow described that first year as "lonely." She found little support in the community.

"I knew it would be hard, but I didn't know how hard it would be," Terrie Morrow said.

Working through it

But somewhere along the way, the couple who was not considering becoming parents again, began the adoption process with Abbey.

They couldn't show Abbey love outright. She first needed to feel safe and experience compassion, Terrie Morrow said.

It's been a process for the family.

Even last month, as Terrie Morrow pulled Abbey in a wagon down a sidewalk by their home, the girl's eyes grew wide with fear as a man with his hood up approached and passed them.

"I get scared that someone is going to take me when I fall asleep," Abbey quietly told Terrie Morrow, who immediately crouched down to offer her comfort that she is not going anywhere.

With time, Terrie Morrow said she has seen Abbey settle down more and work on coming to terms with what has happened in her life.

"Abigail loves projects and keeping busy," Terrie Morrow said. "If she slows down, it makes her think."

Abbey, who is enrolled in Zeeland Christian School, has a social coach who is with her at all times. This person helps Abbey cope with minor frustrations so that they don't snowball into full-blown tantrums.

On Oct. 29, Abbey was officially adopted into the family. Her entire school class came to the adoption hearing. It was standing room only.

The judge told the Morrows he had never seen so many people at an adoption hearing.

For the family, it represented how much has changed for Abbey in just the past year.

Reliance on faith

The couple credit their faith for keeping them strong.

Terrie Morrow said that when looking at the Bible she wrote in every day when Abbey was first removed from her daughter's home, she sees uncanny parallels with what the family has prayed for and what they have received.

Abbey, whom Terrie Morrow said did not like religion when she first came to their home, has also begun to find comfort in Christianity.

On the first page of her own Bible, Abbey wrote, "Thank God for Terrie + Cal. I'm been wateing (sic) for a home."

Though Christmas 2014 was rough because Abbey was still filled with anger, this recent holiday was pleasant, Terrie Morrow said.

The parents focused on helping Abbey create her own traditions at home, such as enjoying Christmas movies with a mug of hot chocolate every night.

They even visited Tennessee over the break, and much to their surprise, Abbey didn't have a single meltdown.

Terrie Morrow said despite the initial feelings of frustration at giving up their retirement years, she and Calvin are feeling nothing but blessed to have Abbey.

"We have traded that life of what we thought would be fulfilling to a real life," Terrie Morrow said. "It is very fulfilling to watch life through a child. We see both the joy and the sadness."

Health Dept. fetes retiring chief

Three Rivers Commercial-News – January 13, 2016, By Elena Hines

COLDWATER — "We're going to miss you very much, and I hope to be able to follow in your footsteps," Rebecca Burns, current Environmental Health Director for the Branch-Hillsdale-St. Joseph Community Health Agency, told Steve Todd, retiring Friday as Health Officer following 40 years with the agency that Burns will soon lead.

An open house Tuesday at the Coldwater main office of the Health Department allowed colleagues present and past to share lunch and wish Todd well, in addition to hearing reminiscences and watching him be presented with awards.

Burns gave Todd with a glass jar full of coins, a "pot of gold" from the staff in appreciation for all the good he had done for the agency and community.

Mark Miller, director of local health services for the Michigan Department of Health and Human Services, gave Todd a "Special Public Health Recognition Award" that he said he had only given out six times in 20 years.

MSU, Hurley center to fight lead poisoning in Flint

The Detroit News – January 13, 2016, By Karen Bouffard

An initiative to moderate the effects of lead poisoning in Flint's children will be announced Thursday by Dr. Mona Hanna-Attisha and the Michigan State University College of Human Medicine, according to Hurley Medical Center.

Hanna-Attisha, the Hurley Medical Center pediatrician who discovered elevated lead levels in Flint children in August after the city began drawing water from the Flint River in April 2014, will lead the project to be announced at a Thursday press conference in Flint.

Experts in pediatrics, child development, psychology, toxicology and other disciplines will develop interventions to help the children recover from lead poisoning. Even small amounts of lead can delay mental and physical development in children. Children under the age of 6 are especially vulnerable. At very high levels, lead poisoning can be fatal.

The Genesee County Health Department, Michigan Department of Health and Human Services and MSU Extension will be included in the collaboration. The initiative will be supported by the MSU College of Human Medicine Division of Public Health located in downtown Flint.

Truancy case dropped against mom of toddler allegedly kicked to death

MLive – January 13, 2016, By John S. Hausman

MUSKEGON, MI – A conviction of criminal truancy has been dropped against Octavia Nicole Jones, mother of a 16-month-old girl allegedly kicked to death in their apartment last year.

Jones' now 7-year-old son, the subject of the truancy case, has been doing well in the custody of his paternal grandfather and step-grandmother.

In fact, the boy was recently named "Student of the Month" at Orchard View Early Elementary, where he's a first-grader, according to Chief Assistant Prosecutor Timothy M. Maat.

At a deferred sentencing hearing for Jones on Monday, Jan. 11, Muskegon County 60th District Judge Raymond J. Kostrzewa set aside her previous conviction, and the Muskegon County Prosecutor's Office moved to dismiss the charge against her.

According to court records, Jones, 24, of Muskegon Township has successfully completed the terms of her deferred sentence, leading to dismissal of the charge.

Jones had pleaded guilty July 14, 2015, to criminal truancy, a maximum 90-day misdemeanor. Sentencing was deferred for six months.

Nine days after that plea, Muskegon County Circuit Judge Kathy L. Hoogstra ordered the boy placed, for the time being, in the custody of his father's parents. That was with the consent of Jones and the boy's father after Jones had earlier agreed to give Hoogstra authority to supervise the boy.

The boy, who was age 6 through most of the 2014-15 school year, had "significant behavioral and truancy issues," in the words of a Family Court referee. The child had missed 31 full school days plus an additional three mornings without excuse that year, according to school records provided by the Department of Health and Human Services. On Feb. 10, 2015, Jones was charged criminally with truancy.

Later that month, on Feb. 27, Jones' daughter, A'Laina Brown, died in their apartment in the 800 block of Shonat Street while her then 6-year-old half-brother was also in the home.

Jakari Pollard of Muskegon Heights, now 14, has been charged with open murder for allegedly kicking A'Laina in the stomach hard enough to tear her liver and kill her.

In early December, Pollard was found incompetent to stand trial due to "cognitive immaturity" based on a report from an examiner with the Michigan Center for Forensic Psychiatry.

The finding will be reviewed in February.

Michigan State Employee banner image

The State Emergency Operations Center (SEOC) is coordinating a response to the ongoing health and safety issues in the city of Flint's drinking water. Teams from the Michigan State Police, Genesee County Sheriff's Department, Michigan Department of Health and Human Services, and volunteer organizations have been delivering bottled water, water filters, replacement cartridges and water testing kits at homes in the city of Flint since Tuesday.

To help with this critical work, the SEOC is looking for volunteers to expand this effort and continue this distribution during the upcoming holiday weekend. Teams are being assembled for shifts on Saturday, January 16; Sunday, January 17; and Monday, January 18, 2016. If you are interested in volunteering your time for this critical work, please complete the information in one of the attached surveys (depending on which day you are volunteering).

To volunteer on Saturday, January 16, <https://www.surveymonkey.com/r/28NVJBL>

To volunteer on Sunday, January 17, <https://www.surveymonkey.com/r/26NMJKK>

To volunteer on Monday, January 18, <https://www.surveymonkey.com/r/26P7P5G>

Volunteers will begin their assignment at the Local Emergency Operations Center located in the Genesee County Administration Building located at 1101 Beach St, Flint at 9 a.m. and end by 4 p.m. Parking is available at the corner of Beach Street and 8th Street. Lunch will be provided. This is strictly a volunteer effort, as all three days will be unpaid. Volunteers are responsible for their own transportation; mileage reimbursement for personal vehicles is not authorized. Volunteers should dress for working outdoors and wear foot attire appropriate for walking.

This opportunity is for state employees and their immediate family members 16 years of age or older only, others looking to assist should volunteer through the American Red Cross in Flint. The volunteer coordination center for the Red Cross is located at 1401 S. Grand Traverse, Flint, MI. They are open from 9 a.m. to 7 p.m.

For more information on the state's response efforts, visit www.michigan.gov/flintwater.

This e-mail was sent to pungi2@michigan.gov using GovDelivery on behalf of: the State of Michigan, 111 S. Capitol Ave., Lansing, MI. *You are receiving this message because you are a State of Michigan employee.*

Legionnaires' disease strikes Michigan county managing water crisis

Fox News – January 14, 2016

The Michigan county already reeling from lead-contaminated drinking water in the city of Flint has seen a spike of Legionnaires' disease resulting in 10 deaths that may or may not be related to the water crisis, officials said on Wednesday.

Genesee County, which includes Flint, had 87 cases of Legionnaires' from June 2014 to November 2015. State officials told a news conference they could not conclude that the increase was due to a switch in the source of Flint's water.

"That just adds to the disaster we already are facing with respect to elevated lead levels," Governor Rick Snyder said.

About half the cases were connected to Flint water and half were not, according to Nick Lyon, director of the Michigan Department of Health and Human Services.

Legionnaires is a type of pneumonia caused by inhaling mist infected with the bacteria Legionella. The mist may come from air-conditioning units for large buildings, hot tubs or showers.

Genesee County and Michigan health departments are investigating the increase as are the U.S. Centers for Disease Control and Prevention and the U.S. Environmental Protection Agency, Snyder said.

Snyder called in Michigan National Guard troops, who arrived on Wednesday to help distribute bottled water, water filters, testing kits and other supplies to Flint residents.

The governor, who has been accused of waiting too long to intervene in the crisis, also requested support from the Federal Emergency Management Agency, which has appointed a disaster recovery coordinator to help Michigan.

Financially strapped Flint was under the control of a state-appointed emergency manager when it switched its source of tap water to the nearby Flint River in April 2014 from Detroit's water system 60 miles (100 km) to the southeast to save money.

Flint returned to the Detroit water system in October after tests found some children had elevated levels of lead in their blood and lead was found in higher-than-acceptable levels in the water. The city said in December lead levels remained well above acceptable levels.

Snyder has apologized for the state's mishandling of the situation and declared a state of emergency in Genesee County to bring in additional state resources.

Last week, the U.S. Attorney's Office in Detroit said it was investigating the lead contamination of Flint's water. Flint residents have filed a federal lawsuit accusing the city and state of endangering their health.

Q&A: A Look at the Drinking Water Crisis in Flint, Michigan

ABC News – January 13, 2016, By Jeff Karoub, Associated Press

The city of Flint, Michigan, is getting heavy state and national attention and much-needed assistance as it deals with a drinking water crisis that began after officials switched water source in 2014 while under state financial management, and the tap water became contaminated with lead.

Michigan National Guard leaders began arriving in the city Wednesday to help distribute bottled water, filters and other supplies. The Federal Emergency Management Agency also approved a request by Michigan Gov. Rick Snyder, whose administration has come under fire for how it handled concerns about the water, to coordinate a recovery plan.

It's yet another challenge for a city of 99,000 people beset by numerous auto factory closures and thousands of job losses over the decades, and where about 40 percent of the population lives in poverty.

Some questions and answers on how Flint got here, where things stand and what's next:

WHEN AND WHY DID FLINT SWITCH ITS WATER SOURCE?

Flint had long received its water from Detroit's massive system but officials complained about the rates. For years, officials in Flint and surrounding Genesee County discussed creating an independent system — along with a separate pipeline to Lake Huron. In April 2014, Flint left Detroit's system and joined the regional effort, tapping into the Flint River as its primary source until the pipeline would be completed. It was seen as an effort to save money while the city was led by an emergency manager appointed by the Republican governor.

WHAT HAPPENED?

Right away, residents complained about the taste, smell and appearance of the water, and reported adverse health reactions, but officials said state tests met federal safety guidelines. A General Motors plant stopped using the water, saying it was rusting its parts. Subsequent independent tests found children with elevated levels of lead in their blood and it was determined that the highly corrosive river water was drawing lead from aging pipes. State officials initially challenged or dismissed those findings, and, for more than a year, lead leached into homes. Lead exposure can cause behavior problems and learning disabilities in children, and kidney ailments and other issues in adults.

WHEN DID THE STATE ACKNOWLEDGE THE PROBLEM?

County health officials declared a public health emergency Oct. 1, and the next day Snyder announced \$1 million for home water filters. A week later, he called for Flint to return to Detroit's water system, said water at schools would be immediately tested and pledged millions more in aid. That month, he also said a task force would review how everything had been handled and offer recommendations.

WHY DID IT TAKE SO LONG?

Snyder said he sought answers earlier last year from state environmental officials but action was delayed when his office received inaccurate information. The state auditor general and the task force faulted the Department of Environmental Quality for not requiring Flint to treat the river water for corrosion and for belittling the public's fears. Former DEQ Director Dan Wyant resigned last month. Critics have argued Snyder should have acted sooner as the person ultimately responsible, a point he recently acknowledged and for which he apologized.

Efforts also intensified with the November election of Mayor Karen Weaver over the incumbent, who had blamed state and federal officials. Weaver declared a state of emergency, which led the county and ultimately the state to do the same last week.

WHAT'S NEXT?

Snyder pledged this week that officials would contact every household in Flint to check whether residents have bottled water and a filter and want to be tested for lead exposure while his administration works on a long-term solution. Nearly 30 Guardsmen are expected to be in place by Friday, enabling American Red Cross volunteers to join door-to-door efforts. The Federal Emergency Management Agency also has approved Snyder's request to coordinate a recovery plan.

Snyder said that since October, about 12,000 filters have been distributed and roughly 2,000 blood tests have been done — uncovering 43 cases of elevated lead levels — but the actions aren't "good enough." It can sometimes be difficult to gauge the effects, which health officials say can take years to fully manifest.

— — —

This story has been corrected to show that Genesee County, not the city of Flint, declared the public health emergency.

Flint doctor will head team to fight health problems from Flint water crisis

MLive – January 14, 2016, By Dominic Adams

FLINT, MI – The Flint doctor who first raised red flags on elevated lead levels in children will lead the fight to combat lead exposure for children and residents who exposed to harm after the disastrous city water switch.

Dr. Mona Hanna-Attisha will head a collaboration between Hurley Medical Center, Michigan State University's college of human medicine and other community organizations.

A news conference announcing the partnership is set for Thursday, Jan. 14, at MSU's medical campus in downtown Flint.

"This is why I feel that we're in a state of emergency," said Dr. Mona Hanna-Attisha, director of Hurley's pediatric residency program and an assistant professor in the Department of Pediatrics & Human Development at Michigan State University's College of Human Medicine. "If we don't do something now for these kids, then we will see the results of lead poisoning. It's more important now than it's ever been."

Hanna-Attisha will be the director of the pediatric public health initiative.

She said there will be three things the work will focus on:

- continue assessment work to collect data and see how many children have high blood levels
- ongoing monitoring of those impacted
- work on intervention in order to prevent long-term consequences

Lead is a toxic metal that was used for many years in products found in and around homes and may cause health effects such as behavioral problems and learning disabilities, according to the U.S. Environmental Protection Agency.

Other potential effects, health officials have previously said, may include the potential for additional attention deficit hyperactivity disorder, lower IQs and delinquent behavior.

"Our whole community is traumatized," Hanna-Attisha said. "We want to bring hope to the community. We want to build a model community health organization. We need to start thinking about tomorrow."

Residents will be connected with experts in the fields of education, pediatrics, child development, psychology, nutrition, toxicology, geography and others, according to Dr. Aron Sousa, interim dean of MSU's college of human medicine.

"There's a lot of analysis of intervention that needs to be done over the course of years," Sousa said. "Our initiative and collaboration with Hurley will allow Flint to determine whether or not the interventions are working. This is not a short-term effort."

The initiative also will partner with the Genesee County Health Department, Michigan Department of Health and Human Services and MSU Extension, organizers said.

On Wednesday, Jan. 14, the Virginia Tech university professor who spent months studying Flint's water problems says the failure to treat Flint River water to make it less corrosive could have set off an outbreak of Legionnaires' disease here.

Legionella bacteria sometimes infects the lungs and causes pneumonia, resulting in Legionnaires' disease, according to the Centers for Disease Control and Prevention.

The bacteria can also cause a less serious infection known as Pontiac fever that seems more like a mild case of the flu, the CDC says.

Gov. Rick Snyder and state officials said there's no evidence of a clear link between the outbreak and the water system change that's caused a public health crisis here because of elevated blood lead levels in children.

From May 2015 to November 2015, 42 cases were confirmed in Genesee county.

Three of those were fatal.

Snyder also deployed the Michigan National Guard to Flint on Wednesday to help with the distribution of water and water filters.

Here's the process refugees go through to resettle here

MLive – January 14, 2016, By Ryan Stanton

- Related: Refugee starting new life in Michigan: 'I'm grateful for this nation'

It's not a quick process, and it's not easy.

But for those fortunate to receive clearance to come to the U.S. as refugees, there's some help along the way.

Nathaniel Smith, a resettlement case manager at Jewish Family Services of Washtenaw County, explained the refugee resettlement process this week.

JFS, a nonprofit in Ann Arbor, is the only resettlement agency in Washtenaw County contracted through the Department of State to resettle refugees.

"The services we offer are very comprehensive," Smith said. "The refugee process starts overseas before a refugee arrives at our office here at JFS. After a refugee has fled their home country, they apply for refugee status in a second country. They undergo rigorous security screenings with the Department of Homeland Security, as well as the State Department, and they also go through medical screenings."

The process of receiving clearances and going through security checks can take up to a few years before the refugees can come to the U.S., Smith said.

"The cases are then assigned to nine national-level agencies," Smith said. "And then these national agencies distribute cases to their local affiliates, such as JFS. The national agency we work with is the Hebrew Immigrant Aid Society."

Smith said cases are sent to local affiliates such as JFS based on the refugee's existing connections in the area, such as family or friends, and the local agency's ability to serve a specific client population group.

"Many of the cases JFS receives already have family or friends living in the Ann Arbor area," Smith said.

JFS also has the capacity to handle up to 23 resettlement cases per year in which the refugees have no connections to anyone in the U.S.

"And these cases come primarily from Syria, Iraq and Afghanistan, since JFS is best equipped to serve these client populations at the moment," Smith said.

Smith emphasized that the work JFS does begins before the refugee arrives in the United States.

"Once we receive notice of a case, we contact their U.S. ties and meet with them to talk about their ability to help with the incoming case," he said. "We try to involve the U.S. ties as much as possible in the resettlement process to help the refugee acclimatize to their new life here quickly."

JFS also works to line up housing for refugees prior to their arrival. If they're unable to stay with family or friends, JFS works with property management companies such as McKinley and Beal Properties to locate a suitable place to rent, making sure the refugees are able to move in immediately upon arrival.

Refugees receive \$925 per person as welcoming money during the first 90-day resettlement period, which includes money for rent.

JFS also works with various partners to secure donated items, including food, clothing and furniture.

"JFS picks up refugees from the airport, providing a culturally appropriate meal upon arrival," Smith said. "JFS provides transportation from the airport to the refugee's new home, as well as for all appointments during the first 90 days."

Interpretation services also are provided for all client appointments to make sure communication is clear and details are understood by both parties.

"Case management is provided for arriving refugees for the first 90 days here, although the services don't stop at that point," Smith said. "That's just the period of time when the most intense case management is provided."

JFS meets with each refugee to develop a service plan, having refugees describe their needs and goals for starting their new lives here.

Within the first 10 days, JFS takes refugees to Social Security to apply for a number, and they're enrolled in English classes at JFS.

The agency also helps refugees apply for public assistance through the Department of Health and Human Services.

"Many refugees enroll in Medicaid, food stamps and cash assistance upon arrival," Smith said.

"When we apply for benefits, DHHS in the state of Michigan, they have refugee-specific workers, so we're able to work with those workers at an intimate level and we're able to overcome a lot of the barriers and challenges that we have," said Shrina Eadeh, director of resettlement services at JFS.

"We also meet with them month to month, so we can go over difficult cases," she added. "We can talk about what processes are working, what's not working at the moment, and just kind of meet and follow up. So, that's been something that's been implemented in the last year and a half, and it's worked out tremendously for us. Our clients have been able to get their benefits faster. Those workers know about the resettlement process and they know about the clients, so that's something new the state of Michigan has started and it's been really working out well."

JFS also submits information to U.S. Citizenship and Immigration Services to update permanent addresses for refugees.

If it's requested by the refugee, JFS also has the capacity to file affidavit of relationship paperwork for refugees' family members still overseas.

"Within the first 30 days, refugee families' children are also enrolled in area schools here, something that refugees consistently describe to us as very important for them," Smith said. "Refugees' children might have gaps in their education due to having lived in a refugee camp for several years or in a situation where there's poor or no education. JFS works with clients and with area schools to ensure that children are enrolled into the correct grade level and given educational opportunity to meet their educational needs."

Refugees also go through a cultural orientation class at JFS, introducing them to aspects of U.S. culture and laws, as well as things they might encounter here that might be strange to them coming from a different culture.

JFS also schedules health screenings at St. Joseph Mercy Hospital for all arriving refugee cases.

"St. Joe's has also been great in working with us," Smith said. "They have a couple of dedicated staff who contact us regarding any issues, and also to schedule appointments for arriving refugee cases. They also provide followup treatment for any medical concerns that come up during these refugee health screenings."

Smith said JFS works with all refugees to develop budgets prior to the 90-day mark, and after 90 days the resettlement case is closed.

"But they are able to continue receiving services here at JFS through the employment services department for assistance with finding or retaining employment, and also with the recertification department, which helps clients work toward

getting back into a career field they may have been involved in overseas but might not have the credentials for here," he said.

Ex-cop in prison charged in alleged prescription drug ring

MLive – January 14, 2016, By Brad Devereaux

LANSING, MI — A former police officer in prison for robbing a pharmacy was among three Michigan residents charged in an alleged prescription drug ring, Michigan Attorney General Bill Schuette reports.

The Michigan Attorney General's Office filed charges Wednesday, Jan. 13, in the 54B District Court in Ingham County against former police officer Christopher Parmelee, 37, of Lansing, Lyndsey Bennett, 33, of Dewitt, and Pamela Wolf, 50, of Eaton Rapids.

The charges allege the prescription drug ring involved impersonating doctors, submitting fake prescriptions and defrauding the Michigan Medicaid Program.

Felony complaints allege that Parmelee, Bennett, and Wolf submitted fraudulent prescriptions to acquire the opioid pain medication "Norco" as well as codeine cough syrup, paid for by the Michigan Medicaid program.

The alleged scheme involved a person posing as a doctor calling in fake prescriptions for controlled substances to the DeWitt Hometown Pharmacy in DeWitt, Meijer Pharmacy in Charlotte and Meijer Pharmacy in DeWitt, all located in Eaton and Clinton counties, the attorney general's office said.

The complaint alleges the prescriptions were picked up and handed to others in exchange for some prescription pain pills.

The charges were filed following an investigation launched by Schuette's Health Care Fraud Division after a complaint was referred by the Michigan Department of State Police, Tri-County Metro Narcotics Squad, Schuette said.

All three defendants were charged with:

- Two counts each of Medicaid Fraud-Conspiracy; a felony punishable by imprisonment of not more than ten years or a fine of not more than \$50,000 or both;
- Two counts each of controlled substance-delivery/manufacture, a felony punishable by up to seven years in prison and/or a fine up to \$10,000.
- Two counts each of controlled substances-obtaining by fraud, a felony punishable by up to four years in prison, and/or a fine up to \$30,000.
- Two counts each of medicaid fraud-false claim, a felony punishable by up to four years in prison and/or a fine up to \$50,000.

Christopher Parmelee, a former police officer, is serving a 5- to 10-year prison sentence with the Michigan Department of Corrections after being convicted of a Nov. 23, 2014, armed robbery at a Lansing Township pharmacy, according to the AG's office.

He will be arraigned at a later date, the AG's office said.

Parmelee was employed at the Perry Police Department from Dec. 12, 2009, until Feb. 11, 2014, and at the Langsburg Police Department from Oct. 20, 2010, until Feb. 3, 2014, according to the attorney general's office.

Defendants Wolf and Bennett were arraigned Wednesday, Jan. 13, before Judge Richard Ball of the 54B District Court in East Lansing and each defendant was released on \$10,000 personal bond.

They are due in court later this month.

"Prescription drug abuse is an epidemic in Michigan and across the country," Attorney General Bill Schuette said in a prepared statement.

Addressing the problem requires a multi-faceted approach, he said, including aggressive law enforcement focused on trafficking.

"Addiction destroys lives," Schuette said. "The people who supply these strong, and potentially lethal drugs need to be stopped."

Gov. Rick Snyder, along with Lt. Gov. Brian Calley, Schuette, and Health and Human Services Director Nick Lyon held a news conference in October in Detroit about the surge in opioid abuse in Michigan and nationwide, citing a report from the state's 21-member Prescription Drug and Opioid Task Force.

- Gov. Snyder: It's time to address Michigan's pain pill problem

Gov. Rick Snyder, along with Lt. Gov. Brian Calley, Attorney General Bill Schuette, Health and Human Services Director Nick Lyon revealed several startling statistics during the presentation of a new report from the 21-member Prescription Drug and Opioid Task Force.

During the event, Calley said the proliferation of doctor-prescribed medication is a direct contributor to the recent upsurge in heroin use, which has led to an 11-fold increase in overdoses between 2000 and 2013.

Michigan teen fighting rare toxic shock syndrome

Detroit Free Press – January 19, 2016, By Sarah Sell, WZZM

[Click here](#) for video

GRAND RAPIDS, Mich. — The family of a Greenville teenager wants others to be aware of the rare disease that almost took their daughter's life.

Rylie Whitten, 15, has one of the worst cases of toxic shock syndrome that doctors in west Michigan have ever seen. It's a condition that affects primarily young women -- but because it starts as a staph infection, anyone can get it.

For the Whitten family, it happened just after the holidays on Jan. 4. Rylie was anxious to get back to school. Her father, Nate, says she didn't feel well, which was unusual. "She's young, healthy, never had any medical problems whatsoever."

Nate and Rylie's mother, Jill, kept her home from school that Monday and Tuesday. "She was lying in bed," Nate said. "All the sudden, she was moaning. This is not Rylie at all."

That night, they took her to an emergency room in Greenville. Rylie didn't have the flu or meningitis; the tests revealed something more alarming, Nate said. "Probably within 10 to 15 minutes of blood work, we found out Aero Med has been dispatched to Greenville and she will be transported down here," referring to Helen DeVos Children's Hospital in Grand Rapids.

There, Rylie was taken to the pediatric intensive care unit. Dr. Surender Rajasekaran took over her case.

[DETROIT FREE PRESS](#)

Mem's Facebook post on baby's Down Syndrome goes viral

"So, you have the cardiovascular system failing, lungs failing, so it's pretty serious; in her case, it was very serious," said Dr. Rajasekaran.

Rylie was put on life support. She had a severe infection that led to toxic shock syndrome.

Dr. Daliya Khuon specializes in infectious diseases and says TSS is rare. "The general incidence in this country is one in 100,000. It's rare," she said.

TSS is typically caused by the use of super-absorbent tampons. It was prevalent in the 1980s and led to several products being taken off the market. Today, warnings are written on literature inside the box.

"The number of hours you have a tampon in and the number of days you've used tampons is associated with increased risk," said Dr. Khuon.

The number of TSS cases has decreased over the past 20 years. Doctors here in west Michigan still see a few cases each year, but generally not this bad.

DETROIT FREE PRESS

A parent's quandary: Which age is best?

At the children's hospital, Dr. Rajasekaran asked the family to put Rylie's picture up in her room. "I think nurses and staff forget there is a child that was outside this ICU," he said. "I like a picture to remind everybody this is what we're fighting for, to get her back to that."

An effort is also going on outside the hospital. As you look around the community of Greenville, there are "Pray for Rylie" messages on businesses. Friends are raising money and holding candlelight vigils at her church.

"It's going to bring tears to my eyes right now," Nate said, describing that support movement. "You drive through, and the amount of community support -- that is so awesome."

The Whitten family credits those prayers and the doctors for Rylie's recovery. As she continues to heal, the family wants to educate others about TSS. "I do not wish this on anyone in the world," said Nate. "If we could do something somehow, Rylie would want to do that to get this out there."

Rylie is slowly being taken off life support. She's still in the PICU, but seems to be getting better each day.

Learn more about TSS by following this link.

The Michigan Department of Health and Human Services keeps track of TSS cases. According to the numbers since 2012 (available at this link), there does not appear to be an upward trend.

Flint's Legionnaires' Outbreak May Be Tied To Its Contaminated Water

Huffington Post – January 19, 2016, By Erin Schumaker

Flint, Michigan, isn't just dealing with tap water contaminated by lead. A Flint Journal-MLive Freedom of Information Act request revealed Saturday that 87 people were diagnosed with Legionnaires' disease as the city's toxic drinking water flowed into homes for some 18 months. Ten of those who were sickened died.

Although state officials say they can't pinpoint the source of the outbreak, Legionnaire's infections spiked sharply in Genesee County when Flint tried to save money by changing its water source from Lake Huron to the Flint River in April 2014. Two months later, there were six cases of Legionnaires' reported in Genesee County, and the number of cases remained elevated until Flint switched its water source back to Lake Huron in the fall of 2015.

"That just added to the disaster we were already facing," Michigan Gov. Rick Snyder said in a press conference last week, referring to the known lead problem. "But from a scientific or medical point of view, I don't believe that [a link between Legionnaires' and city water] can be made today."

[Click here](#) for graphs associated with this article.

Between 8,000 and 18,000 people in the United States are hospitalized each year with Legionnaires' disease, a severe form of pneumonia, according to the U.S. Centers for Disease Control and Prevention. Most people contract the noncontagious disease by breathing air contaminated with Legionella bacteria, which grows in moist environments such as water towers, swimming pools and water systems. Symptoms of the disease include high fever, trouble breathing and muscle aches; people with weakened immune systems, those older than age 50 and smokers are all at a higher risk for contracting Legionnaires'.

While Legionnaires' disease drummed up considerable media attention when an outbreak in the Bronx killed 12 and sickened 120 in September 2015, it's not unusual for sporadic outbreaks to crop up around the country each year.

Flint's 'astonishing and unacceptable' water problem

Should Flint's Legionnaires' outbreak prove to be connected to the city's water, it would be the latest in a series of public health catastrophes connected to the 2014 drinking water switch. So far, public health officials have identified E.coli bacteria, trihalomethanes (a chemical byproduct of water disinfectants) and most notably, lead, in Flint's drinking water.

Lead, which leached into the municipal drinking supply when the Flint River's corrosive water interacted with the city's old piping, can cause irreversible long-term cognitive impairment and is especially dangerous to young children, whose brains are still developing, and the unborn children of pregnant mothers.

Although the water source was changed back in fall 2015 after lead was discovered, the damage was done. The number of children with elevated blood-lead levels (≥ 5 micrograms per deciliter) nearly doubled in Flint after the water switch, Dr. Mona Hanna-Attisha, the director of the pediatric residency program at Flint's Hurley Medical Center, pointed out in September.

While the government's threshold for lead poisoning is 10 micrograms per deciliter of lead in blood, experts increasingly agree that there is no safe level when it comes to health risk. And lead poisoning is often silent, meaning lead-poisoned children might not show any signs of damage until years or even decades later. That damage can include anemia, kidney dysfunction and high blood pressure, as well as increased aggression and problems with the criminal justice system.

"Your development is progressing so rapidly at those early ages," Hanna-Attisha previously told HuffPost. "You're going to be carrying that exposure forever."

Even today, Flint's water isn't safe to drink because compromised supply pipes haven't been replaced. The National Guard is distributing bottled water and water filters to residents and officials are unable to say when the water will be potable again.

President Barack Obama declared a state of emergency in Flint on January 16, ordering disaster relief efforts to Genesee County following plea for federal assistance from Snyder and a letter from the Congressional Black Caucus.

"The timeline for the water issues, which have led to a state of emergency being called for the City of Flint, are astonishing and unacceptable," the caucus members wrote. "The lack of proper oversight and action has led to tens of thousands of citizens being exposed to toxic levels of lead in their drinking water and demands a thorough federal response."

What is being done about Legionnaires'?

The Michigan Department of Health and Human Services is currently investigating the 2014-2015 Legionnaires' outbreak in Genesee County.

"The State of Michigan is treating this situation with the same urgency and transparency as the lead response in the city of Flint," according to a statement published on the department's website.

Class action lawsuits being filed in the Flint Water Crisis

WLNS – January 19, 2016

FLINT, MI. (WLNS) – A news conference Tuesday will announce two lawsuits being filed against local and state-level departments and officials, including Governor Rick Snyder for their roles in the Flint Water Crisis.

The class action suits have been filed by Flint residents in the Michigan Court of Claims and Genesee County Circuit Court.

Other people and entities named in the suits include two former Flint emergency managers, the Michigan Department of Environmental Quality, the Department of Health and Human Services and Genesee County.

They cite personal injury and physical damage caused by the lead-tainted water.

The plaintiffs and their legal teams will attend the meeting to announce the lawsuits at the University of Michigan Flint.

Flint, Michigan water crisis spurs GoFundMe campaign: "Every penny will be used to buy water"

Fox 6 Now – January 18, 2016

FLINT, Michigan — The water supply in Flint, Michigan is so contaminated with lead that it's spewing out of faucets in unnatural yellow and brown colors. Blood tests show increased levels of poisonous lead in children who live there.

It's so bad the city's 100,000 residents have to live off bottled water. But not everyone can afford it.

That's why people such as Flint resident Marseille Allen have launched GoFundMe campaigns to buy bottled water for people with limited resources.

"Every penny donated will be used to purchase water for Flint residents, particularly for families with children," Allen said on the campaign page, which went live Sunday.

Allen's campaign has a goal of \$2,000 and had already raised more than that by Monday morning.

“With the funds raised so far, I can purchase more than 3,600 bottles of water!” Allen said as she thanked donors in a campaign update.

President Obama declared a national state of emergency in Flint on Saturday and the National Guard has been deployed to deliver clean water to residents.

Even Cher has gotten involved — she’s teamed with Icelandic Glacial to donate over 181,000 bottles of water.

Most of the bottled water donated to Flint is delivered to distribution centers, but Allen is worried about people who can’t get to these locations.

“We’re focused on the hardest hit areas,” she said. “The elderly can’t pick up water so we’ll deliver it to them and others in need.”

Allen, who lives near the mayor, filters her own water three times but said many of the people in Flint can’t even afford filters.

According to the 2010 U.S. census, Flint’s population is 56.6% African American and the median household income is less than \$25,000. More than 41% of the population is below the poverty level.

Basic filters start at about \$12 and a pack of three filter replacements costs about \$20. But the Michigan Department of Health and Human Services has started giving away a free water filter to clients.

The city’s water supply was contaminated with toxic levels of lead, when its source was changed from Lake Huron to the Flint River.

The decision to change the source was made two years ago by the state in an effort to save money. Michigan was in control of the city’s budget because of a financial emergency.

After the change, residents complained about the taste, look and smell of the water. State officials repeatedly told concerned residents there was nothing to worry about, but in August 2015 researchers found high levels of lead in the drinking water.

Now residents, businesses and even hospitals are struggling with basic tasks such as preparing food and washing hands.

Allen hopes the campaign will help spread awareness about how dire the situation is for so many.

“This is going to be an ongoing issue,” she said. “It’s not going to be fixed until the \$1.5 billion to replace all of the water pipes is secured. It could take years so really any contribution that people can make — at any point — is going to help.”

A Detroit-native, Allen moved to Flint in September for work. She’s the president of Warriors Trust Fund, an organization that provides emergency funding and support to military veterans.

“I was always raised to give back,” she said. “I’m in it for the long haul.”

Legionnaires Disease Kills 10 in Flint, Michigan Since Water Change

Food Poisoning Bulletin – January 17, 2016, By Carla Gillespie

Ten people have died and 77 others have been sickened by Legionnaires Disease in Flint, Michigan and the surrounding area since June 2014, the Michigan Department of Health and Human Services announced this week. The spike in illnesses began two months after the city of Flint changed its water supply to the Flint River in a money-saving move, but health department officials say its too early to tell if the two are related. One reason health officials say they cannot be directly link the cases to the water change in Flint is the they don't have isolates from case patients.

"While Legionellosis cases are not uncommon, we are concerned about the increase in cases seen in Genesee County," said Eden Wells, M.D., chief medical executive with the MDHHS. "We are releasing this report and continuing surveillance and investigations to ensure that appropriate actions are being taken to protect the health of the residents of Flint."

From June 2014 to March 2015, there were 45 confirmed cases of Legionnaires Disease, seven of them resulted in fatalities. From May 2015 through November 2015, 42 cases were reported, of those, three were fatalities. Those sickened ranged in age from 26–94.

Legionnaires' Disease, which does not spread from person-to person, causes pneumonia-like symptoms including fever, cough, fatigue, confusion, aches and lung inflammation. It develops when water mist contaminated with Legionella bacteria is inhaled. The source of contaminated water mist can be showers, faucets, whirlpools, swimming pools, fountains or cooling towers in air conditioning systems.

Between 8,000 and 18,000 Americans are hospitalized with Legionnaires' Disease. each year. The condition is so-named because it was first discovered when an outbreak of pneumonia struck an American Legion convention in 1976.

Partnership aims to reduce hospital admissions for mental health conditions

Crain's Detroit Business, January 17, 2016, By Jay Greene

A partnership between Molina Healthcare of Michigan and mental health provider Common Ground in Bloomfield Hills is tackling arguably the most expensive and chronically ill patients in the health care system: those who are dually enrolled in the Medicare and Medicaid programs.

Nationally, 9 million dual-eligible patients, including 200,000 in Michigan, account for 40 percent of all Medicaid spending and 27 percent of all Medicare spending. Care costs total about \$350 billion a year, or 9 percent of the nation's \$4 billion annual health care tab.

The Molina-Common Ground contract is one example of providers working together to cut into those high costs.

It works like this: Under the contract, participating hospitals in Genesee County contact Common Ground when a Molina member comes into the emergency department with an acute mental health problem.

Within 30 minutes, a member of Common Ground's crisis intervention and recovery team arrives at the hospital to assess the Molina member, said Heather Rae, CEO of Common Ground.

Upon consultation with the hospital emergency doctor, the patient is either admitted to the hospital or diverted to Common Ground, where the patient receives a minimum of 30 days of outpatient care, Rae said.

If hospitalized, the individual is followed by Common Ground through face-to-face encounters and by telephone for 30 days.

Participating hospitals in Genesee County include McLaren Flint and Hurley Medical Center in Flint.

During the first year of the project, which began in early 2014, 19 of 39 patients, or 49 percent, who went to a hospital ER in Genesee County were successfully diverted to recover at home and were not admitted.

Molina netted savings of \$75,825 after paying Common Ground for its services, which led to a return on investment of 4.15 to 1.

"The savings are significant," said Jim Forshee, M.D., Molina's medical director. "We want to expand this program. Some of these patients don't need to be hospitalized. Outpatient care is a better alternative."

Patients with mental health issues end up at a hospital ER for a variety of reasons.

"They have a suicide threat, they aren't sleeping well, maybe they are abusive with family members or have a medication problem because their meds have changed," Rae said. "Usually it is after 5 p.m., and they have no place to go."

Forshee said most patients who go to ERs with behavioral problems are in a crisis situation.

"They have domestic problems, emotional outbursts and are sick," Forshee said. "Some are hearing voices and seeing spiders."

Rae said too many people with mental health issues are admitted to hospitals for observation and treatment because ER staff are more trained to manage medical emergencies and not deal with mental illness.

"The program is about providing quality alternatives to psychiatric inpatient hospitalization, not about preventing people from a needed admission to the hospital," said Rae.

Rae said the ER intervention concept was the brainchild of former CEO Tony Rothschild, who retired from Common Ground in October.

"Molina was very interested," Rae said. "These programs have better outcomes at a lower cost to taxpayers."

Common Ground is paid two separate fees — initial assessment and 30 days of outpatient services. "This is not a revenue center," Rae said. "We don't make a lot of money on it because it isn't our purpose."

Broader efforts

Last March, a federal demonstration program began in Michigan and nine other states to reduce costs of thousands of dual-eligible patients and to improve their care coordination.

Under a contract with the Michigan Department of Health and Human Services, Troy-based Molina is taking care of several thousand dually eligible Medicare and Medicaid patients in a federal demonstration program in Macomb and Wayne counties.

Molina is one of seven other HMOs and four mental health agencies participating in the Centers for Medicare and Medicaid Services' demonstration in Michigan. The goal is to cut 7 percent of costs over the next three years.

Because the dual-eligible population is growing, Molina expects to expand the ER diversion program with Common Ground and other mental health providers. He said the top reason for a dual-eligible patient admission to a hospital is behavioral health issues.

"Half of the visits of dual-eligible patients with mental health issues are now admitted," said Forshee, noting that before the program began, almost all ER visits with mental health problems resulted in admission.

Greg Matzelle, Molina's behavioral health manager, said only one patient so far has been readmitted to a hospital in the same week after being assessed. "We try to empower the patient to go back to their medical home and primary care physician," he said.

Rae said Common Ground and Molina are talking about extending the joint program into Oakland County, where Molina estimates about 200 Molina patients could use the service in 2016.

Forshee said cost savings in Oakland County could be higher because there are more dual-eligible patients and because Common Ground has more resources.

For example, Rae said that last year Common Ground added two new services to its Oakland County program: a 23-hour medically supervised observation program and a crisis residential unit at Common Ground's Resource and Crisis Center at the Oakland County governmental complex for county workers and other patients.

Over the past 10 years, Common Ground has helped Oakland County save money by reducing the number of employees admitted to hospitals for behavioral health issues.

Rae said Common Ground would like to expand the program to other health plans in Genesee, Oakland, Wayne and Macomb counties. It also is talking with another HMO in western Michigan, she said.

Another benefit to the ER diversion program is that it has helped alleviate the shortage of psychiatric beds in hospitals.

"Nurses sometimes have to search around for an available bed, sometimes in a different unit," he said.

"We've had patients transfer from Genesee County to Macomb County for a bed."

HMOs seek mental health bids

Crain's Detroit Business – January 17, 2016, By Jay Greene

A move is underway in Michigan to further privatize the public nonprofit mental health system by turning over \$2.4 billion in state funding to Medicaid HMOs, some of which are owned by for-profit insurers.

The Lansing-based Michigan Association of Health Plans has mounted a lobbying effort to gain state approval next year to bid for the potentially lucrative contracts that now are exclusively in the public health sector.

"Is it feasible for health plans to contract with networks as behavioral providers? It certainly makes sense," said Rick Murdock, MAHP's executive director. "Should the state of Michigan look at ways to continue to improve the effectiveness of the Medicaid program? Absolutely, we think they should."

Murdock said health plans are managing medical care, behavioral health, substance abuse and developmentally disabled in other states. They include Illinois, California, Florida, New Mexico, South Carolina, Washington, Wisconsin and Texas.

On the other side, officials for the Michigan Association of Community Mental Health Boards have warned state officials about the dangers that could face a vulnerable and needy population by allowing health plans to take over the state's mental health system.

"This budget is pretty attractive to the health plans," said Bob Sheehan, CEO of the mental health board association. "They see that market, and they believe they can do quite well" financially.

Sheehan said the health plans underestimate the difficulty in caring for a complex population and their plans' ability to earn high profit margins in behavioral health.

"This is not a traditional market most health plans are used to serving," Sheehan said. "(We) treat the more severe cases that involve the additional complexities of poverty, housing, employment, disease and environmental concerns."

Under the state's current mental health payment system, the Department of Health and Human Services makes monthly per-person Medicaid payments to "prepaid inpatient health plans," commonly called mental health authorities, in 10 regions that cover about 251,000 Michiganians. Wayne, Oakland and Macomb counties each make up one region with their mental health authorities.

The mental health authorities, in turn, contract with a variety of provider organizations and community mental health agencies to deliver services that include autism, developmental, substance abuse, behavioral health and serious mental disorders. The 46 community mental health agencies, which serve 83 counties, also receive general fund dollars for services not covered by Medicaid.

The opening foray by health plans, say some observers, began last year in Wayne County when for-profit Molina Healthcare, based in Long Beach, Calif., acquired a minority interest in Integrated Care Alliance, a developmental disability provider organization.

ICA has a contract with the Detroit-Wayne Mental Health Authority, one of the regional agencies that contract with HHS.

In September, Molina acquired 100 percent interest in ICA, a move that led Tom Watkins, CEO of DWMHA, to terminate ICA/Molina's contract for failure to notify the authority and other contract violations. The authority's board in mid-December suspended the termination until at least Jan. 31 to study the issue.

Molina said in a statement its acquisition of ICA is part of a broader strategy to integrate physical and behavioral health care for the people it serves in Michigan and at least seven other states.

Craig Bass, a Molina vice president, said the health plan is looking nationally to improve care coordination between physical and behavioral health. He said Molina in Michigan already treats many of the patients that ICA does, so the acquisition was a natural fit.

"We want to ensure our members get the best behavioral, medical and developmentally disabled care possible," Bass said. "Frequently that doesn't happen when you have two payers who are two different entities."

Of the people served by the mental health authorities in 2015, more than 70 percent are already enrolled in a Medicaid HMO, according to the Michigan HHS and the Ann Arbor-based Center for Healthcare Transformation and Research.

Taft Parsons, M.D., Molina's vice president of behavioral health, said managing diabetes and other chronic conditions in conjunction with mental health conditions results in better outcomes.

"We have multidisciplinary teams that work to improve (patients') illness burden by working with local social services (and community organizations) to deliver services the member needs," Parsons said.

Cost savings

If Gov. Rick Snyder and the state Legislature agree that Michigan should change its mental health contracting system, Bass said Molina would be better able to serve that population with the experience it is gaining through ICA and a dual eligible demonstration program in Michigan where it is coordinating physical and behavioral health care for Medicare and Medicaid patients.

Sources tell Crain's the health plans are suggesting to Snyder and state legislators that allowing them to manage medical and behavioral health in an integrated fashion could cut costs by \$200 million from 2017 to 2019.

The cost savings then could help pay for state general fund transfers mandated by the \$1.2 billion Michigan road bill, which Snyder recently approved and begins in 2017. Most of the road improvements will be paid by higher gas and license taxes, but \$150 million must be shifted by 2018, rising to \$600 million by 2020 and after.

Murdock acknowledged savings could accrue if the HMOs managed all care. But he said benefits to the state also could help to address the following over a three-year period: the pending shortfall of state revenue in fiscal year 2017 for the Medicaid program.

The shortfall, which could tally more than \$1 billion, includes the potential loss of provider taxes that support the Medicaid program, rising specialty drugs costs and \$150 million in 2017 in general funds to support Healthy Michigan, Murdock said.

"If we are truly interested in treating the whole person, we should move toward more of an integrated approach," Murdock said.

James Haveman, former community health director, said he supports the health plan's effort to coordinate both physical and behavioral health.

"I am in favor of anything that streamlines the current structure. We need to shrink the administrative costs," said Haveman, president of the Haveman Group, a consulting firm based in Grand Haven.

"The current structure ... has multiple levels of administration. I have come to the conclusion we need to lessen that so we can get out more services," he said.

Evolving care, financing

Over the past 50 years, Michigan's mental health delivery system has changed drastically. Starting in 1987, the state began closing 11 of 16 psychiatric hospitals and moved more into the outpatient arena.

In 1996, Michigan carved out behavioral health from physical health reimbursement under a federal waiver when the state began contracting with Medicaid HMOs.

"Now we are preaching integrated care. You can't preach that unless you carve back in those services," Haveman said. "I support the carve-in (to Medicaid HMOs). The community mental health board model has to change."

To reduce costs, Snyder in 2013 reorganized mental health delivery by funneling state dollars into geographic regions in no-bid contracts to 10 mental health authorities.

At the same time, Lt. Gov. Brian Calley headed the Mental Health and Wellness Commission to evaluate and recommend changes in the state's mental health system.

One still unmet recommendation is to "improve coordination of behavioral health and physical health."

This recommendation could mean more streamlining in the public mental health system to eliminate administrative duplication.

But mental health professionals told Crain's they fear Snyder could be persuaded to allow for-profit HMOs like Molina, Aetna Inc., Total Health Care and Meridian Health Plan to take over the public system.

Officials for Snyder's office did not return several calls for comment.

Making a case

If Medicaid HMOs take over the system, said Willie Brooks, CEO of the Oakland County Community Mental Health Authority, the drive for profits by the health plans could take up to 10 percent of payments from an already underfunded mental health system.

Brooks explained that Medicaid HMOs' retain an average of about 15 percent of revenue as administrative overhead and profits. Nonprofit mental health agencies retain about 5 percent or less as overhead.

"Whenever you don't have to worry about shareholders' profit, the money goes back to the people," Brooks said. "HMOs' goal is to avoid risk, and they make more money by avoiding risk. Our goal is to approach risk and minimize the long-term affects by providing services."

Watkins, who is at the center of the for-profit versus public nonprofit mental health debate, said he is not opposed to further privatization of the mental health system.

"I am anti-profiteering," Watkins told Crain's in an email in a reference to the move by health plans to take over the public mental health system.

But Haveman said there is enough money in the system to allow for-profit HMOs to generate their return on investment and integrate care.

"Community health boards have sizable reserves," he said. "HMOs can contract with the people who know how to provide the services. (HHS) can write the regulations to ensure services are delivered to the people."

While opposing HMO takeover plans, Elmer Cerano, executive director of the federally funded consumer advocacy group Michigan Protection & Advocacy Service, agreed that the state mental health code would have to be modified to closely regulate for-profit HMOs.

"The concern we have is because there are high-cost users and there will be a temptation by for-profit companies to reduce services" to create adequate profit margins, Cerano said. "We are opposed to organizations taking profits out of the system because this removes needed resources."

Cerano said the 10 mental health authorities are capable of squeezing out more efficiency by reducing the number of community mental health agencies under contract.

"We don't need 46. They should be more aligned with the (mental health authorities) to reduce the administrative overstructure," said Cerano, noting that Detroit Wayne already has consolidated operations.

John Kinch, executive director of Macomb County Community Mental Health, said he also believes the public system can improve to reduce costs and deliver greater services to patients.

"We have come a long way (since the 1960s) to improve care for patients," he said. "It is silly to put that at risk."

Health Officials Investigate If Legionnaires Outbreak in Flint, Michigan, Linked to Water Crisis

ABC News – January 14, 2016, By Gillian Mohney

Health officials are investigating whether two Legionnaires' disease outbreaks in and around Flint, Michigan, were caused or impacted by the ongoing water-contamination crisis, authorities said today.

The Michigan Department of Health and Human Services has launched an investigation into two outbreaks of Legionnaires' disease, in 2014 and 2015, which sickened 87 -- killing 10 of them -- in Genesee County. Those sickened ranged in age from 26 to 94, and became sick between either June 6, 2014, to March 9, 2015, or May 4, 2015, to Oct. 29, 2015, the agency said.

Elevated lead levels have been found in Flint's water supply after the source was temporarily changed from Detroit's municipal supply to the Flint River. It is unclear if the Legionnaires' cases are linked to the water crisis but Michigan health officials said they were looking into the possibility.

"While Legionellosis cases are not uncommon, we are concerned about the increase in cases seen in Genesee County," Dr. Eden Wells, chief medical executive with the MDHHS, said in a statement today. "We are releasing this report and continuing surveillance and investigations to ensure that appropriate actions are being taken to protect the health of the residents of Flint."

The naturally occurring bacteria legionella can cause a dangerous bacterial disease if it is inhaled. The bacteria are generally spread through water droplets, usually in the summer or early fall, and have been linked to air-cooling towers, pools, hot tubs and even water misters at the grocery stores, since the light mist can be an ideal transport for the bacteria to enter the lungs.

Most people exposed will not get sick, but older people and those with compromised immune systems are at risk for developing a serious infection or pneumonia.

Flint Water Crisis Prompts Girl Scouts to Write to Michigan Governor

Michigan Police Go Door to Door During Water Crisis

Water Bottles Handed Out During Water Crisis in Flint, Michigan

Of the 45 confirmed cases in the first outbreak, 47 percent used water from the City of Flint at their homes. In addition, more than half of those people had suspected health care-associated Legionnaires' disease after they had "healthcare facility exposure in the two weeks prior to their illness onset," officials said. However, officials could not rule out that they contracted the disease from a different environmental exposure, since the bacteria is naturally occurring.

It was after the second outbreak that health officials started looking into a possible link to the ongoing water crisis, according to Michigan Department of Health and Human Services spokeswoman Jennifer Eisner.

A full report about the second wave of legionella cases and where people contracted the disease has not been released by the health department, but officials said it remains unclear how patients contracted the illness in at least 10 cases. In those Legionnaires' cases, the patients had "no exposure to a Flint hospital in the two weeks prior to illness nor were their homes on the Flint water system," according to the health department. Officials are still investigating how or where those patients were exposed. Legionnaires' disease has an incubation period of two to 10 days.

The health department said it may be hard to connect the legionella cases to the Flint water crisis since there is a lack of bacterial specimens from these patients. If the same kind of bacteria found in the patients were also found in the water system or in other parts of the environment, the health department could determine a source of the outbreak.

Dr. William Schaffner, an infectious disease expert at Vanderbilt University Medical Center, told ABC News that the aging water infrastructure in Flint may have allowed legionella bacteria to "set up house."

In addition, estimating an accurate number of people who have been sickened by the disease can be difficult because not all doctors test for Legionnaires' disease unless they are told to look out for the infection or if their patient does not get better, said Schaffner, who is not involved with the investigation in Michigan.

The water crisis started when the city disconnected from Detroit's water supply and began drawing its water from the Flint River. It was intended as a stop-gap measure until the completion of a pipeline to Port Huron Lake as the source for Flint's water.

But it was later discovered that lead from the old pipes had begun to leach into the water due to improper treatment. And even though the supply was switched back to the Detroit water supply in October, the anti-corrosive chemicals that were used to prevent the leaching have not yet been able to stop lead from being present in the water, a state spokeswoman told ABC News last month.

Vaccination rates steady despite new waiver requirements

WLNS – January 14, 2016

LANSING, MI (WLNS) – Vaccination rates in Ingham County are steady, but Ingham County Health Officer Linda Vail says more needs to be done.

"Vaccinations are important because there are diseases out there that you can prevent yourself from getting, some of them very, you know, threatening diseases," Vail said.

Last January, the Michigan Department of Health and Human Services made it a requirement for parents to meet with county officials if they wanted a vaccination waiver for their children.

"It's really critical, in terms of us in being able to control diseases in schools, so the more we can get that waiver rate down, the better," Vail said.

As of September, Ingham County was ranked 32nd in the state for the number of waivers, an improvement from their 46th place ranking the year before.

So far in Ingham County, there have been nearly 360 waivers submitted for this school year.

But Jackson County hasn't been as affected by the requirement, according to health officer Richard Thoun.

"For 2015, we're pretty much at the same level of 2.6 percent with 167 waivers," Thoun said.

But legislation introduced in December by Representative Tom Hooker is trying to stop the new waiver requirements.

In a phone interview today, Hooker said departments like the M.D.H.H.S. shouldn't be allowed change the law, saying instead that they should, "make sure the law is followed as it is written."

But Linda Vail says getting rid of the change does more harm than good.

"We need to keep the law in place so that people are getting informed consent, and you know, just like many, many other things in the public health world, things sometimes take time," Vail said.

Vail says her overall goal is to make sure there is enough immunization to make sure everyone is safe.

Representative Hooker says he expects the bill loosening waiver requirements to be up for discussion in the House soon.

People of Flint speak: 'Nobody should ... be living like this'

Detroit Free Press – January 17, 2016, By Elisha Anderson

Ariana Hawk heated a bowl of distilled water in the microwave, dipped a washcloth in it and wiped her 2-year-old son's itchy, irritated skin.

She said she has been cleaning Sincere Smith's body this way — or with wet wipes — since last summer, because the boy's doctor doesn't want him bathing in the tap water at their Flint home.

"I can't afford to go buy 20 gallons of water just to bathe him one time," said Hawk, a 25-year-old single mother of three who attends Mott Community College and is pregnant.

Sincere has rough patches of skin on his legs, arms and face, she explained, adding that his skin condition started with a rash on his stomach after Flint switched its water-supply source from Lake Huron to the more polluted and corrosive Flint River in April 2014 while under control of a state-appointed emergency manager.

Hawk blames the water for her middle child's suffering and plans to sue.

"We get treated like ... we don't matter," she said. "That's how it's been feeling."

Residents across Flint — some of whom stopped using the water immediately after the cost-saving change because of its smell, color, taste and source and others who continued to drink and cook with it — echo her frustration.

People, pets, even plants have been affected by the poisonous, lead-contaminated water, they said.

Community members feel betrayed, worried, angry, sad and stressed and are bracing for what will happen next in Flint, a city with 99,000 residents, 40% of whom live in poverty.

The city has seen a spike in the levels of lead in children's blood. Lead poisoning, experts say, affects IQs and has lifelong impacts, including learning disabilities, speech and language problems and an increased risk for behavioral issues.

"This is a population-wide exposure," said Hurley Children's Hospital pediatrician Dr. Mona Hanna-Attisha.

Kids absorb lead more easily and have been exposed to lead if they drank Flint water since April 2014, health officials said.

"I love my kids," said Pamela Battle. "I want them to grow up like I grew up ... wasn't no worries about no water."

Battle, whose seven children range in age from 1 to 16, said she got a water filter Monday. Before that, she was using water from her faucet to cook, make Kool-Aid and put it in bottles for her two youngest children.

"We were drinking it regularly," said Battle, 36. "The whole family. Everyone here."

The water in her previous home was discolored and tasted terrible, she said, but when she moved to her house on Chambers in December 2014, the water came out of the faucet clear and tasted fine. She said she didn't realize there was an issue.

At the urging of her mother, Battle went to Freeman Elementary School on Tuesday with some of her kids to get their blood checked for lead. The school hosted an event where she learned about lead poisoning and its effects on children.

"I'm really concerned now," she said.

Battle said she has no choice but to stay in Flint with her children and live with the water crisis. Others have had enough and plan to leave.

Kerry Wheeler, 45, said she, her 11-year-old daughter and their dog are moving to Taylor to escape the water situation.

Shortly after she moved into her Flint apartment on Alvord Avenue last fall, her active dog became lethargic, wouldn't eat and started vomiting. Wheeler took the 10-year-old boxer named Beast to the veterinarian and was told to give him bottled water.

"Once I switched him to bottled water, he perked right back up after a couple days," she said.

Water in her home has varied from clear or cloudy to brown or yellow. At times, it has been so discolored, she refused to let her daughter bathe in it, opting for wipes instead, she said.

"Nobody should have to be living like this," Wheeler said.

Band-Aids on a big problem

Gov. Rick Snyder declared a state of emergency Jan. 5 and acknowledged that actions taken by the state have not been good enough at a news conference Monday, saying "more work needs to be done with more urgency."

State efforts were ramped up this week to get free bottled water, filters, replacement cartridges and water testing kits in the hands of Flint residents. Members of the Michigan National Guard have been deployed to Flint, and Snyder requested federal help for the water crisis.

On Saturday, President Barack Obama declared a federal emergency in Flint and ordered federal aid to help.

Throughout last week, people lined up to pick up free water and filters at fire stations, and more free supplies have been passed out door-to-door by Michigan State Police troopers, volunteers and others.

"It's that kind of door-to-door contact that's important right now, so people know that we're committed to their health and their safety," Snyder spokesman Dave Murray said Friday.

Flint Mayor Karen Weaver said Thursday night that the city has made progress but needs more people to help with the efforts.

"We're starting to get what we need ... but these are Band-Aids, and we need the Band-Aids because as long as we can't drink the water, we have to have bottled water. We have to have filters," Weaver said.

The state helped the city move its source of water back to Lake Huron water supplied by Detroit in October, but concerns about contamination remain because the Flint River water damaged pipes and other infrastructure. Dan Wyant, the former head of the state Department of Environmental Quality resigned last month. The agency failed to require the addition of anticorrosive chemicals to the water.

Snyder has repeatedly apologized for the state's role in the water crisis, but many say he still hasn't done enough.

"That apology ain't going to help these kids," said Hawk, who said she doesn't know what her children may face because of their exposure to lead. "That apology's not going to help the families that's suffering."

Weaver said the ultimate solution is to fix the infrastructure and provide long-term help for all of the people impacted in the city where public trust has been shattered.

"We didn't deserve to be in this position, in this situation," she said. "And what happened here in Flint should never happen to any community."

It's 'not fair'

With so many in need of clean water, churches and organizations have turned into water stations, taking donations from people across metro Detroit and the country and distributing bottled water.

Carl Hunter, dressed in a winter coat, gloves and hat, trekked through the bitter cold and snow with a case of water on his head after leaving the North End Soup Kitchen, where water was given away, on Wednesday.

"The water crisis is bad," the 48-year-old Flint man said, walking to his home about a mile away with 28 bottles of water.

Inside the soup kitchen, person after person grabbed a case. Residents slogged to the bus stop with the water, hopped on bikes with it, loaded it into cars or walked home with it.

"I think everybody in Flint is scared," said Gloria Waite, a secretary there who said she is thankful her water comes from a well.

She pointed out people from the U.S. go to other countries to dig wells for people without water, and said people here shouldn't have to worry.

At First Trinity Missionary Baptist Church, members packaged water bottles in plastic bags and loaded cases into cars this week. The church bought some of the water, and some of it was donated.

On Monday, Members of Second New Hope Baptist Church in Royal Oak Township dropped off a load of water in a U-Haul. They worked with several churches in metro Detroit to purchase the water for Flint residents.

Doris Walker, 55, picked up a case for herself and took two more cases for her mother, 87-year-old mother Euler Walker, and her mother's 98-year-old neighbor, Addie Hart.

"I'm not able to get out," Walker explained as she sat on her couch.

She is on a fixed income and said she has been buying water at the same time she has been paying high water rates for water she couldn't drink, calling it "not fair."

Catrina Tillman is married to the church's pastor, the Rev. Ezra Tillman Jr., and said there is outrage in Flint. She pointed out the irony that Michigan is surrounded by the Great Lakes, yet people in Flint have lead in their water.

"It's kind of like you feel like you're the black sheep in the family," she said. "In this case, you feel like you're the black sheep in the country."

Impact won't show for years

The Michigan Department of Health and Human Services recommends that all Flint children younger than 6 get the blood-lead level test, which requires a prick of the finger.

"Blood-lead level testing is an important part of our efforts to identify people who have been harmed by drinking water containing lead," department spokeswoman Jennifer Eisner said in an e-mail. The department "recognizes that the full community of Flint must be the focus of the public response."

Dr. Hanna-Attisha, whose research showed a dangerous spike in children's blood-lead levels, cautioned that blood tests for lead can provide false reassurances for families. That's because lead stays in the blood a short amount of time — the half-life is about a month — so the tests reflect only recent exposure.

"It's not going to show past exposure," Hanna-Attisha said.

She said there is a lag period between lead exposure and symptoms, which can appear three to five years down the road.

People need to go to their regular doctor for a long-term follow up, she advised. Pediatricians check children's development, and the sooner they find a problem, the sooner the child can get early intervention.

Hanna-Attisha has made recommendations of what can be done to limit the impacts of lead poisoning in children, including better nutrition, health care and early education initiatives.

Flint Community Schools Superintendent Bilal Tawwab said the water crisis is going to impact a large number of the district's students and the impact is yet to be seen.

He said there are about 5,500 kids in the district and he wants to ensure all kids graduate career- or college-ready.

"How do we ensure that all kids meet that goal when you have such a crisis?" Tawwab said.

The U.S. Attorney's Office in Detroit, the U.S. Environmental Protection Agency, Michigan Attorney General Bill Schuette and a task force appointed by Snyder are investigating the lead contamination of Flint's water.

The state also is investigating outbreaks of Legionnaires' disease in the Flint area resulting in 10 deaths, but officials said they're still looking for the cause.

Bottled water the norm now

Paul Lewis, 65, switched his family to bottled water more than a year ago, but continued to use tap water for his plants.

The plants went from being green to looking frumpy. Then they turned brown and died, never responding to the plant food he gave them to try and spruce them up.

"After the water fiasco, I just realized it was the water that I was putting on them," he concluded.

The retired truck driver and his family, including a wife, son, daughter and three grandchildren, use bottled water for everything except bathing. The water costs about \$40 every two weeks.

As he loaded up 10 cases of water during a trip to Walmart, a man at the store said, "You can sure tell when people live in Flint."

How to help

A fund has been established to address the short- and long-term needs of Flint children exposed to lead through contaminated drinking water. Donations can be made at www.flintkids.com.

Holy Trinity Lutheran Church, 39020 Five Mile in Livonia, is asking for gallon jugs of water to be dropped off at the church by Jan. 30. Volunteers will take the donations to be distributed in Flint. Call 734-464-0211.

Flint Community Schools is accepting cash donations and bottled water. Call the district's finance office at 810-767-6030 about cash donations. Bottled water drop-offs can be coordinated by calling 810-760-1310.

Donations are being accepted by the United Way of Genesee County.: Visit unitedwaygenesee.org and click on the "GIVE" button. There's an option to support the Flint Water Project. Call 810-232-8121 for details. A new phase for outreach is investment in services to help residents who have been exposed to contaminated water.

Catholic Charities of Genesee County accepts cash or bottled water donations to aid soup kitchens and warming centers, call 810-785-6911.

To help Flint community activists who are delivering water: Call Melissa Mays at 810-423-3435.

Lead testing for children

Eisenhower Elementary School on Jan. 26 from 3:30 to 6:30 p.m. at 1235 Pershing Street in Flint

Carriage Town Ministries on Feb. 4 and Feb. 8 from 3 p.m to 6 p.m at 605 Garland Street in Flint

By the numbers

Supplies distributed to Flint resident at fire stations and by teams going door-to-door since Jan. 9

More than 18,500 cases of water

About 46,000 water filters

More than 3,200 water kits

Legionnaires' cases around Flint raised flags in 2014

Detroit Free Press – January 16, 2016, By David Jesse

When officials with the Michigan Department of Health & Human Services noticed an uptick in Legionnaires' disease cases coming out of Genesee County in 2014, it raised alarms.

But those alarms never reached the public, at least not until last week, when Michigan Gov. Rick Snyder held a news conference to say officials have seen a spike in the number of cases of a severe form of pneumonia, caused by the Legionella bacteria. A link between Flint's tainted tap water is now suspected as the cause but is not yet confirmed, according to GERALYN Lasher, a spokeswoman for the Michigan Department of Health & Human Services.

The issue back in 2014? Delays for numerous reasons in investigating the Legionnaires' cases meant critical samples weren't gathered from patients and interviews of those affected weren't done until six or seven months after they had been sick, Lasher said.

"(Interviewers) were asking people to remember what they had done for the two weeks prior to being sick, but were asking months later," Lasher said.

Then, as the numbers of cases dropped, the professionals said they thought the danger had passed. Then, in recent months, another wave arrived, raising more concerns. There have been 87 cases of Legionnaires' disease in Genesee County from June 2014 to November 2015 — and 10 of those cases resulted in death.

Legionella, which grows best in warm water, usually enters the body from a person breathing it in, but it can't spread between people. The most vulnerable are those with weakened immune systems. Flint's water problems began in 2014 after the city switched its supply source from Lake Huron to the Flint River water, which was treated at the city water treatment plant.

Citing e-mails, [MLive reported Saturday](#) that concerns about the link between water and the disease were first raised on Oct. 17, 2014, when representatives of the Genesee County Health Department and Flint's water treatment plant met. They discussed the county's "concerns regarding the increase in Legionella cases and possible association with the municipal water system," a county e-mail *MLive* obtained through a Freedom of Information Act request said.

The same e-mails also showed county officials waited for months for the city to respond to requests about the water plant. The county eventually filed a FOIA request in an effort to get some information, according to the *MLive* report.

Requests for comment to Flint city and Genesee County officials by the Free Press Saturday weren't returned.

Dave Murray, spokesman for Snyder, said the the overall breakdown in communications over the Legionnaires' cases is among the processes that are being looked at statewide.

"DHHS experts say it's not unusual to have a *Legionella* outbreak, and there was one the year before in Wayne County," he said in an e-mail Saturday to the Free Press. "But there are many processes that are being reviewed as a result of the situation in Flint. We always strive to improve, especially when the health and safety of Michiganders is involved."

<http://www.freep.com/story/news/local/michigan/flint-water-crisis/2016/01/16/legionnaires-cases-around-flint-raised-flags-2014/78905276/>

Public never told, but investigators suspected Flint River tie to Legionnaires' in 2014
MLive — January 16, 2016, By Ron Fonger

FLINT, MI -- Public health officials identified the Flint River as a potential source of a deadly outbreak of Legionnaires' disease some 15 months ago, but people using the water were never told until this week, documents obtained by The Flint Journal-*MLive* show.

Records obtained through the Freedom of Information Act by The Journal show an investigation aimed at making a connection -- or ruling out a tie -- between Flint River water and Legionnaires' bogged down as key agencies in the probe clashed and the information never reached the public.

Gov. Rick Snyder and state Health and Human Services Department officials said Wednesday, Jan. 13, that the Flint area experienced a spike in Legionnaires beginning in summer 2014 that resulted in 10 deaths in 18 months.

Officials said there's no evidence of a clear link between the outbreak and the decision to use the river as the city's water source in April 2014, but documents show public officials in the city, Genesee County and the state were aware of the potential connection more than a year before disclosing it.

During that time, a debate about the safety of Flint's water supply raged as the city struggled to control bacteria, total trihalomethanes (TTHM) and lead.

"Each agency continued to do it's own internal activities, and they did not share (the information) in the open public," former Flint Mayor Dayne Walling said Friday, Jan. 15.

"There needs to be mandatory disclosures so the public is aware of what all those different agencies are doing," said Walling, who confirmed he was told of the issue in March 2015.

Walling said his concern at the time was ensuring that Flint officials provided all information needed by the county Health Department as it investigated the Legionnaires' outbreak -- something investigators said routinely did not happen.

The Journal could not immediately reach Mayor Karen Weaver for comment Friday.

In addition to the public agencies' knowledge of the potential link between the outbreak and the river, documents show:

- Worry about the river's possible role as a source of Legionnaires' dates back to at least Oct. 17, 2014, when representatives of the county Health Department and the city's water treatment plant met, discussing the county's "concerns regarding the increase in Legionella cases and possible association with the municipal water system," a county email says.
- County health investigators reported they ran into a wall of resistance from the city water officials as they attempted to gather information about possible sources of contamination in Flint's water system.

An internal email from a Health Department supervisor on Jan. 27, 2015, says employees at Flint's water treatment plant had not responded in months to "multiple written and verbal requests" for information, slowing progress on the probe.

In the same month that the email was written, two new cases of Legionnaires' were reported in the county.

- Information about the Legionnaire's outbreak was shared with the Centers for Disease Control and Prevention, according to an email from an employee with the federal agency from April 2015.

The email calls the Flint area outbreak "very large, one of the largest we know of in the past decade and community-wide, and in our opinion and experience it needs a comprehensive investigation."

County Health Department Chief Officer Mark Valacak said his employees contacted the CDC directly because they wanted to tap into expertise within the agency but were later told by the state Department of Health & Human Services that the federal assistance wasn't required.

Geralyn Lasher, a spokeswoman for the state Health & Human Services Department, said Friday that the CDC did work with the Health Department but said the agency's assistance was not required in June 2015.

At that time, the department told county officials that MDHHS would continue to offer resource and informational support as requested.

· Communication between the city and the county during the Legionnaires' investigation became so strained that the county resorted to filing a Freedom of Information Act request to get information it sought from the city in January 2015.

The FOIA asks the city for information including "specific water testing locations and laboratory results ... for coliform, E-coli, Heterotrophic Bacteria and trihalomethanes."

The same request sought a map or list of locations detailing dead ends in the water system and areas of low pressure -- potential breeding grounds for bacteria.

More than five weeks later, the city had not responded to the FOIA request and a health supervisor with the county said the city's "lack of cooperation continues to prevent my office from performing our responsibilities."

Legionnaires' is a severe, often lethal, form of pneumonia which is caused by bacteria found in water.

· The Michigan Department of Environmental Quality was aware of the potential connection between Flint water and Legionnaires in early October 2014, but representatives of the agency never discussed the issue publicly.

The lack of any comment about the Legionnaires' outbreak and the possible connection to the river came despite DEQ officials appearing at public forums dealing with water safety and as representatives of the agency issued statements that assured Flint their water was safe.

Stephen Busch, district supervisor for the DEQ, said in a March 13, 2015, email to the county that it was "highly unlikely that legionella would be present in treated water coming from the city of Flint treatment plant ..."

DEQ Director Keith Creagh issued a written statement to The Journal Friday, saying the agency "played a support role" in the Legionnaires' investigation.

"During the past year, the Department of Environmental Quality played a support role to both the (state) Department of Health and Human Services and the Genesee County Health Department, providing assistance to local hospitals where it was suspected there may be issues.

"We proactively provided information and conducted site visits at the facilities in question and did evaluations to provide technical assistance to help identify remedial actions," the statement says.

Creagh was named DEQ director after the December resignation of former director Dan Wyant, who stepped down after a task force laid responsibility for the Flint water crisis at the feet of the department.

Snyder has declared a state of emergency because of the health fallout from lead exposure on Flint residents and requested federal disaster assistance.

Flint officials have said the city's aging water transmission pipes were also damaged by corrosive river water while it was used from April 2014 until October 2015 -- a period of time that the city was being run by emergency managers appointed by Snyder.

Valacak said the county's investigation into the source of Legionnaire's was hindered by both the DEQ and the city.

"We (had to) FOIA the city ... We copied the DEQ," Valacak said. "From the DEQ, we kept getting the comment that the water met all the DEQ standards (but) that didn't necessarily protect the public health."

Valacak said his office did not comment on the possible connection between the river and Legionnaires' because it was following protocols and attempting to answer the question about the potential link.

Like residents, Snyder's office said this week that the governor never learned of the possible tie until roughly 18 months after the initial spike in Legionnaire's.

State Medical Executive Eden V. Wells said Thursday, Jan. 14, that state health officials typically do not brief the governor's office of ongoing investigations, but continuing issues surrounding the city's water supply spurred the state's agency to release information this week in advance a formal report being released.

Flint water customers outside of city receive some relief

MLive – January 15, 2016, By Roberto Acosta

GENESEE COUNTY, MI -- Water resources are expected to be delivered to Flint water customers in four communities outside of Flint that receive their water from the city.

Genesee County Board chairman Jamie Curtis said bottled water, filters, replacement cartridges and testing kits were being dropped off in Genesee Township, Burton, as well as resources for Flint Township and Mt. Morris Township.

Curtis said there are four buildings, including two churches and one business affected in Genesee Township, along with a total of 25 buildings in Genesee Township. Those customers may pick up the items at city and township halls in their communities.

"It will get to them quicker this way than the volunteers," said Curtis. Volunteers as part of water resource teams are going door-to-door throughout Flint to provide the items after Gov. Rick Snyder declared a state of emergency in Genesee County due to Flint's continuing water crisis.

National Guard soldiers have joined Michigan State Police, Genesee County Sheriff's Office and Michigan Department of Health and Human Services employees in ramped-up distribution efforts in the city of Flint.

Burton Mayor Paula Zelenko said it was important not to forget the city's people who are on the Flint water system, and affected by the lead issue. Sixty-five buildings in the city including homes and businesses receive water through Flint's system.

The Burton residents affected live primarily on Cheyenne and Menominee streets, as well as some businesses on Dort Highway, according to the city. Burton is billed for the water, with the city of Burton then reimbursed by customers.

"As mayor, it is my job to do everything in my power to protect all the residents of Burton," Zelenko said. "That's why I've been working with Genesee County Board of Commissioners Chairman Jamie Curtis and others to address our concerns for those of our citizens who remain on Flint water."

Burton has inquired about getting its Flint water customers looped into Burton's system and off Flint water, setting aside \$151,000 in community development block grant dollars to create a water main loop for the district.

"We have to go through the city of Flint to turn them off, since it's on their water main," said Zelenko, estimating the work would altogether cost \$200,000. "We wanted to do this long before the whole Flint River water switch."

An issue would remain for those customers, as Zelenko said each resident is responsible for the leads to the city's water main system.

"I'm hoping that's where the state remediation, if there is any, will still help those that have lead lines," she said. "They didn't have a choice in the switch, either, if they did have the lead lines. We just want to make sure our residents are taken care of."

Snyder didn't learn of Legionnaires' until 18 months after outbreak started, officials say

MLive – January 15, 2016, By Gary Ridley

FLINT, MI – Health officials waited roughly a year and a half to notify Gov. Rick Snyder about spiking rates of Legionnaires' Disease in the Flint area, according to state authorities.

State Medical Executive Eden V. Wells said Thursday, Jan. 14, that state health officials typically do not brief the governor's office of ongoing investigations, but continuing issues surrounding the city's water supply spurred the state's health agency to release information prior to a formal report being released.

Health and Human Services Department Director Nick Lyon said during a Wednesday press conference with Snyder that his agency became aware of a spike in Legionnaires' cases around Flint in 2014.

"In the late summer of 2014, we began to see a spike in these cases and we let the local health department know," Lyon said. "We actually stepped in with them and started doing some of these investigations."

Six cases of Legionnaires' Disease were reported in Genesee County in June 2014, which was more than any other month since March 2010 and slightly less than the total number of cases reported in 2013, according to a June 2015 initial report on the outbreak released Wednesday by the Michigan Department of Health and Human Services.

Since June 2014, there have been 87 reported cases of Legionnaires' Disease, resulting in 10 deaths, around the Flint area.

The outbreak began just weeks after the city stopped using treated water from Detroit and began using the Flint River as the source of its drinking water, a change made by a Snyder-appointed emergency manager.

The change has drawn international attention after it resulted in elevated blood lead levels for some of the city's youngest residents and reports of smelly, discolored water from other community members.

Wells said the June 2015 report on the outbreak was initially shared with officials from the Genesee County Health Department and the Centers for Disease Control and Prevention, who were working to identify a source of the outbreak.

The report, which focused on 45 cases of Legionnaires' Disease reported between June 6, 2014, and March 9, 2015, explored each victim's potential connection to the Flint water system and Flint-based medical facilities.

A source of the outbreak has not yet been identified.

The June 2015 report showed all but 10 of the victims either had Flint drinking water at their residence or were at Flint medical facilities within two weeks of symptom onset.

A Thursday release from the Genesee County Health Department stated residents cannot become ill from drinking water containing the bacteria responsible for Legionnaires' Disease. The release stated is a waterborne disease, usually located in man-made water supplies that aerosolize water, such as showers, hot water tanks, humidifiers, cooling towers, whirlpool spas and decorative fountains.

Wells said studies continued into the outbreak when researchers observed a second outbreak of the disease. As health officials compiled data in December 2015, Wells said they decided to inform the governor of the problem.

Snyder said he was informed of the outbreak in the days leading up to Wednesday's press conference.

"The circumstances of these cases prompted the chief medical examiner and other leaders at the Department of Health and Human Services to brief the governor, and he decided to quickly make the information public," Snyder spokesman Dave Murray said.

Legionella, the bacteria that can lead to Legionnaires' Disease, tends to thrive in warm, stagnant water, Wells said. The bacteria occurs naturally, which can make tracking its source difficult for investigators.

"Legionella is a tough bacteria to investigate," Wells said.

Wells said a new report, which include cases from the summer of 2015, is expected to be released within a week.

However, investigators will continue working to identify the source and continue observing the Flint area as temperatures begin to warm in the spring, which could spell a return of the bacteria.

"You can bet there would be a lot of interest as it gets warmer," Wells said.

Corey LaValley to be Sentenced in February in Three Second-Degree Murder Charges

WHTC – January 15, 2016, By Mary Ellen Murphy

ALLEGAN, MI (WHTC) - A 33-year-old Allegan County man will be sentenced to at least 55 years in prison on February 29th for the murder of his girlfriend and her two children, one of whom was his son.

Corey LaValley entered no contest pleas yesterday to three second-degree murder charges. He shot and killed 33-year-old Debra Sheppard, 12-year-old Emma McComber and ten-year-old Corey LaValley, Jr. last March, and then set their home on fire.

The Michigan Office of Children's Ombudsman is still investigating the claims that the Department of Health and Human Services didn't follow up on reports of abuse before the triple murder in Allegan County. Chief investigator Tobin Mills says Child Protective Services was involved at the home of Emma McComber and Corey LaValley Jr. in the past two years.

LaValley claims to have no memory of killing the three.

Did Michigan officials hide the truth about lead in Flint?

CNN – January 14, 2016, By Dominique Debucquoy-Dodley

(CNN)—Michigan officials may have altered sample data to lower the city of Flint's water lead-level reports, according to official documents and a researcher who conducted extensive tests there over the last six months.

Documents and emails show discrepancies between two reports detailing the toxicity of lead samples collected by the Michigan Department of Environmental Quality and the city of Flint between January and June 2015, Professor Marc Edwards from Virginia Tech University said.

Edwards is the lead researcher for the Flint Water Study, a research group that has conducted numerous tests on Flint's system and was the first to publicly identify high levels of lead in the water.

Water crisis in Flint, Michigan, draws federal investigation

The documents and emails were released by researchers from Virginia Polytechnic Institute and State University through a Freedom of Information Act request and viewed by CNN.

According to Edwards, the Michigan Department of Environmental Quality and the city of Flint collected 71 lead level samples from homes when they were required to collect 100. The final report from the Department of Environmental Quality however, only accounted for 69 of those 71 samples.

Edwards said those two discarded samples were "high-lead" and would have lifted the "action level" above 15 parts per billion. The public must be alerted and additional action must be taken if lead concentrations exceed an "action level" of 15 parts per billion in drinking water, according to the Environmental Protection Agency's website.

How tap water became toxic in Flint, Michigan

The report says the two discarded samples were removed from the list "for not meeting sample criteria." In a statement, the Department of Environmental Quality says the rationale for dropping the samples from these two sites "appropriately met the requirements for invalidating samples per federal regulation."

Edwards said the samples should have been taken from homes with lead pipes. The reports say they were, but Michael Glasgow, then-assistant supervisor of the Flint water plant, said this is not true. Glasgow told CNN the records were not complete, and the sampling teams did not know which homes had lead pipes.

"In essence, the state took an 'F-grade' for Flint water's report on lead and made it into an 'A-grade,'" Edwards told CNN.

Federal law requires testing of lead and copper levels in drinking water based on a procedure called the Lead and Copper Rule, or LCR.

Michigan governor apologizes for Flint water crisis

The lead-level report was released in summer 2015, at a time when state and federal officials became increasingly concerned by reports of contaminated water in Flint, emails show.

A June 2015 leaked internal memo from the Environmental Protection Agency raised the issue, saying high lead results in the drinking water were a "serious concern."

The memo, written by an EPA water expert, went on to note that several of the city of Flint's sampling procedures were flawed and data might therefore be compromised.

Of particular concern was the alleged use of a coagulant in the water that may have increased lead levels, and the alleged lack of corrosion control treatment. The coagulant, ferric chloride, was originally used to "improve the removal of organic matter" in the water, but studies showed it may have adverse effects, according to the memo.

Budgets leave children by wayside in 2 Michigan cities

The memo notes that residents were instructed to "pre-flush" taps before samples were taken, a practice that has been shown "to result in the minimization of lead capture and significant underestimation of lead levels."

After then-Flint Mayor Dayne Walling was alerted to the memo, EPA officials told him the findings were a "preliminary draft." The final draft was released four months later, in November. Walling lost his recent re-election bid in a campaign centered around the issue.

In a statement, the EPA says the memo contained "confidential personal and enforcement-sensitive information," and that the memo was immediately circulated to its regional staff working on the Flint water issue.

Receiving community concerns and criticism the time, Republican Gov. Rick Snyder's office reached out to state officials about the emerging reports.

A former spokesman for Snyder wrote to Michigan Department of Health and Human Services officials in July 2015, "I'm frustrated by the water issue in Flint."

"These folks are scared and worried about the health impacts and they are basically getting blown off by us."

Follow-up emails show officials working to address the issue.

A July 2015 email from former Michigan Department of Environmental Quality spokesman Brad Wurfel said, "...the bottom line is that residents of Flint do not need to worry about lead in their water supply."

Wurfel went on to say, "...DEQ's recent sampling does not indicate an eminent health threat from lead or copper."

"This is definitely being driven by a little science and a lot of politics," Wes Priem, an Industrial Hygiene Manager with the Healthy Homes Section of the Michigan Department of Health and Human Services, said in September 2015.

In preparation for a late-September 2015 press conference and in response to data released by Edwards, Michigan Department of Health and Human Services Director Nick Lyon emailed fellow staff, "I would like to make a strong statement with a demonstration of proof that the lead blood levels seen are not out of the ordinary and are attributable to seasonal fluctuations."

Jennifer Eisner, public information officer for the Michigan DHHS, said the emails reflect the fact that at that time, the state's analysis attributed the increase to seasonality.

"It wasn't until later that MDHHS epidemiologists took a more in-depth look at the data by ZIP code and confirmed an increase outside of normal trends," Eisner said in a statement.

Residents and elected officials have often placed the blame squarely on Snyder's shoulders.

"It's pretty hard to avoid the fact that all of this has been on the watch of the governor," said Michigan U.S. Rep. Dan Kildee, a Democrat.

"I'm really trying to focus on holding the people who made the decision accountable, not just apologize."

The governor's office said it responded "aggressively and quickly" to address the challenges in Flint.

"We are now working very closely with local leaders and are reaching out to researchers who have been involved with the issue [so] we can work together on making sure Flint residents have access to safe, clean water," Dave Murray, press secretary for Snyder, told CNN.

On Tuesday, Snyder signed an executive order activating the Michigan National Guard to inform residents about the availability of filters, bottled water, water testing kits and information on lead.

The guard will be going door-to-door to ensure residents have access to safe water and have their water tested, according to the executive order.

This comes after the State of Emergency that Snyder declared on January 5.

Hotline created for 'Logisticare' complaints; State investigating

Click On Detroit – January 14, 2016

The state of Michigan is looking into complaints lodged against Logisticare following Local 4's report of a 79-year-old cancer victim who was stranded by the Medicare transportation service.

The Michigan Department of Health and Human Services has set up a complaint line to gather concerns expressed by many other LogistiCare clients who saw the report.

Watch report: Cancer patient left stranded

The company is working under a \$60 million dollar taxpayer funded contract with the state to provide the elderly and poor with a ride to and from doctor's appointments.

Clients, clinics, and advocates for seniors told Local 4 that LogistiCare is chronically late, and complaints get no response.

State records show the service provided more than a half a million rides in 2015, with only .36% complaints.

Advocates said seniors don't know how to file formal complaints, or are often too sick and intimidated to wage one.

The beneficiary hotline for complaints is 800-642-3195.

Foster kids get a boost at college

The Times Herald – January 14, 2016, By Nicole Hayden

It's a standard, even cute, practice that when kids go off to college parents will send care packages, study packages and maybe even a few extra dollars for gas.

For foster care children, that parental support may be lacking or non-existent. But staff at the St. Clair County Department of Health and Human Services hopes to fill that gap.

The College Basket Program was started in 2010 through the St. Clair County Department of Health and Human services.

The program sends care packages five times a year filled with gift cards, toiletries, school supplies and other needed items.

The program benefits college students who are still in foster care or participating in the Michigan Youth Opportunities Initiative, which provides assistance to current or former foster youth with education, employment, health care and life skills.

Currently St. Clair County DHHS sends baskets to about five to six college students a year, said Sunshine Ratliff, St. Clair County DHHS MYOI coordinator. Some of the students go to St. Clair County Community College and others are scattered across the state.

Ratliff said DHHS volunteers are getting ready to send out February packages — usually Valentine's Day themed with candy — and are looking for donations to fill the baskets.

The items most needed by students include towels, wash cloths, extension cords, winter gloves and hats, new socks, feminine hygiene products, backpacks and gift cards.

“The kids really love gift cards,” Ratliff said. “Especially if they are in need of a bigger item, it is easier for us to send them a gift card to buy then to try to mail it to them.”

Preferred gift cards include gas station, fast food, and stores such as Meijer and Target.

“I usually send the kids a message to see what they need and if it’s something we don’t already have I try to make sure we can get it for them,” Ratliff said.

Each August students receive the largest basket filled with new school supplies, backpacks, cleaning supplies, bathroom items, sheets and blankets, among other items.

The four following packages sent are smaller with thoughtful items in time for holidays and changing seasons.

“We sent hats and gloves in December but they always need more,” Ratliff said. “And kids love brand new socks.”

While DHHS staff organize the baskets, there are no agency dollars funding the project.

Ratliff said the office staff at DHHS hosts fundraisers in their office and all chip in their own money to continue the project. In addition, Kids in Distress Services and groups through Women’s Life Insurance Society pitch in to collect items.

But Ratliff said she is always looking for more donations. Anyone who wishes to donate or wants more information can email her at ratliffS2@michigan.gov.

State of the state employee

Lansing State Journal – January 19, 2016, By Justin A. Hinkley

LANSING – After a consequential 2015 best summed up as “could have been worse,” state employee unions are refocusing in 2016 on bread-and-butter issues such as pay and privatization.

Last year, state employee unions lost a right-to-work case at the Michigan Supreme Court, but the state’s top jurist later emphasized that the opinion did not give the Legislature any new powers over civil servants, as some union officials had feared.

While some state workers worried Snyder’s decision to merge the departments of Community Health and Human Services would mean the loss of frontline jobs, the new Department of Health & Human Services lost employees at about the same rate as before the merger.

[LANSING STATE JOURNAL](#)

[State workers hold steady in '15 budget](#)

And, after the governor’s office forecast shrinking state revenue just as the unions headed into contract negotiations, many worried the administration would use that as an excuse to fight unions on pay and benefits and that negotiations could end up at impasse, as they did in 2013. Instead, the two sides breezed through negotiations and the unions secured raises for their members — though the raises were smaller than in years past.

After surviving those hurdles in relatively good standing, state employee union officials told the State Journal last week they'd focus in 2016 on the following:

Bargaining

The state's "coalition unions" — all state-worker unions covered by collective bargaining, except the Michigan State Police Troopers Association — secured three-year contracts on non-economic issues, but the state held them to one-year deals on pay and benefits. The administration insisted on a shorter economics deal over uncertainties about how a federal health care tax would affect the state budget.

That means those unions, representing about 70% of the state government workforce, will be back at the bargaining table sometime this year.

In the new contracts, which took effect Jan. 1, employees received a 1% salary increase effective Oct. 1, 1.5% lump-sum payments to come this fall, and flat health care costs.

LANSING STATE JOURNAL

State workers get new contracts

Union officials said they hope the administration will recognize how they'd worked with the state in tough times — from agreeing to the shorter-term benefits package this time around to the flat pay and higher out-of-pocket health care costs agreed to in past years.

"We're hoping they're going to look at that with some favor and take care of us a little bit," said Andy Potter, chief of staff for the Michigan Corrections Organization, which represents corrections officers in state prisons.

The troopers got a new, three-year contract in the spring. Troopers received a 2% raise for the first and second years and a 1% raise for the third year, but higher health care costs for troopers.

Privatization

Nick Ciaramitaro, legislative director for the American Federation of State, County & Municipal Employees Council 25, said his group would push this year for passage of a bipartisan package of bills that would add more transparency and accountability to the outsourcing of government jobs.

The bills were introduced this summer but have since stalled in committee.

"The continued defense against outsourcing jobs" is "probably our major concern," Ciaramitaro said, echoing other union officials.

LANSING STATE JOURNAL

Outsource state jobs 'in the sunshine,' reps say

In addition to the pending legislation, unions will be paying close attention to the Michigan Department of Corrections, which recently became the state's first department to set up its own task force for monitoring service contracts. Unions have long argued that the cost of monitoring contracts for abuse — auditors say Corrections spent more than \$2 million monitoring its former scandal-plagued prison food contractor — is not factored into the savings departments claim they'll see through outsourcing.

Advocacy

Without major Supreme Court battles to fight or massive agency mergers to contend with, the unions said they'll have more time for specific advocacy for their members.

Nate Johnson, president of the troopers union, said he'll spend 2016 "continuing to try to restore historically low staffing levels ... to promote continuing to hire troopers and bring those staffing levels back up." He said he wants to focus on "internal improvements," too, looking for ways to make the union more effective for its members.

At the Michigan Association of Governmental Employees, which represents many of the 30% of state workers who are not covered by collective bargaining agreements, Labor Relations Director John DeTizio said he'll continue advocating for pay hikes for nurses at state mental health hospitals.

The State Journal reported in October that staffing shortages frequently cause nurses to work unexpected, mandatory overtime. Nurses say that makes it difficult to keep nurses on the job or recruit new nurses. But the Civil Service Commission last month denied raises for nurses and instead directed MAGE and the state to continue working toward a solution.

LANSING STATE JOURNAL

Union, state partner to protect corrections officers

Ken Moore, president of the Michigan State Employees Association, said in an emailed statement that his group will be focusing on the election.

Citing everything from the state's scandal-plagued prison food contract to the ongoing Flint water crisis, Moore said, "it doesn't take a crystal ball to tell you that folks are just fed up with poor decisions that all seem to cause grief and waste money. With 2016 elections on the horizon, we'll be providing our members with education and information to engage them in the democratic process."

Potter, of the corrections officers union, just last week announced an initiative to standardize the reporting process for when officers are sexually assaulted by inmates. And he said the union will work this year on improved training for officers and a program to address post-traumatic stress disorder among the force.

As Gov. Rick Snyder prepares to deliver his State of the State address tonight, many union officials said they hoped he would recognize the hard work of state employees and the challenges they face in trying to accomplish the state's mission.

"Ten years ago, there were about 10 million citizens in the state and 65,000 state employees," DeTizio said. "Today, there are still about 10 million citizens in the state and only about 50,000 state employees, so the demands in many departments are inordinate."

Read documents here: More class action lawsuits filed over Flint water

Click on Detroit – January 19, 2016

Two more class actions lawsuits have been filed in against Gov. Rick Snyder and state offices over Flint's lead-tainted water.

Read document: Michigan Court of Claims complaint

Read document: Genesee County Circuit Court complaint

The lawsuits request that a preliminary injunction be issued to prevent Flint from issuing any further water shut-off notices for residents who can't pay their bills, and that all water bills be declared invalid.

"Essentially, residents have been getting billed for water they cannot use," said attorney Trachelle Young.

The complaints name Snyder, the Michigan Department of Environmental Quality and the Michigan Department of Health and Human Services. They were filed with the Michigan Court of Claims and Genesee County's 7th Judicial Circuit Court.

"The reason we that we have taken our time and trouble to file three separate lawsuits, each raising these problems, is because the state of Michigan has done so little to fine tune and protect these people," said attorney Bill Goodman.

MP school officials hope pertussis is gone

Morning Sun – January 19, 2016, By Susan Field

Mt. Pleasant school officials are hopeful that whooping cough isn't going to spread after one student had the illness.

Letters crafted by the Central Michigan District Health Department were sent to parents of students at West Intermediate School last week after the agency was notified by a physician that a student had the illness.

Also known as pertussis, whooping cough is a contagious disease of the respiratory tract that is far less common than it once was, according to the Michigan Department of Community Health.

Mt. Pleasant Public Schools Superintendent Mike Pung said Tuesday that the district followed CMDHD policy, sending letters home with students, and that the student who had whooping cough could have contracted it as far back as Dec. 20.

Since no other students have contracted the illness, Pung is hopeful that the incubation period has passed without anyone else catching the disease.

Pung also said the letter urged parents seek medical help if their children had persistent, nagging coughs for longer periods of time than a common cold.

Jennifer Morse, M.D., medical director of the CMDHD, said whooping cough is contagious but not with casual exposure, such as walking by or having a quick conversation with an infected person.

"We consider an exposure that is at risk of getting infected with pertussis someone that has been within three feet of the ill person for at least an hour," Morse said.

While people of all ages can contract whooping cough, severe illness is more common in young children who have not been vaccinated; older children, teens and adults with pertussis could have more mild symptoms, according to the MDCH.

There has been a steady increase in whooping cough cases in Michigan over the past 10 years, according to the Michigan Department of Health and Human Services.

Cases of the disease peaked in 2010 with more than 1,500 cases reported; a provisional total of 847 cases were reported in Michigan in 2012, which represents a 21 percent increase over 691 cases reported in 2011.

Whooping cough is spread when infected people cough or sneeze, expelling droplets that contain the germs that are then inhaled by others, according to the MDCH.

Infants typically contract the illness from older siblings or adults.

Pertussis starts out as a mild upper respiratory infection with symptoms that resemble those of a cold, according to the MDCH.

That includes sneezing, a runny nose, low-grade fever and a mild cough.

After a few weeks, the cough becomes more severe and uncontrolled, according to the MDCH.

Coughing spells can be intense and be followed by a “crowing” or high-pitched whoop as the infected person tries to take a breath, and thick, clear mucus can be present, according to the MDCH.

Between coughing spells, an infected person can appear well, and those spells can happen for one or two months, or longer, and are more frequent at night, according to the MDCH.

Symptoms of pertussis typically appear about seven to 10 days after exposure but might not show up for as long as 21 days.

A person with pertussis can transmit the disease roughly seven days after being infected and remain infectious for about three weeks after the onset of coughing.

Those who are infected and take antibiotics reduces the contagious period by roughly five days, according to the MDCH.

Health departments urge immunization to stop the spread of whooping cough.

Anyone who thinks he or she might have whooping cough should stay away from others, particularly young children and infants, until properly treated, according to the MDCH.

On the Ground This Week: HHS to Lead Federal Response in Flint

The White House – January 19, 2016, By Mark K. Wakefield, Ph.D.

Summary: Here's how HHS is leading the federal government response to the public health crisis in Flint, Michigan.

Ed. note: This is cross-posted on the U.S. Department of Health and Human Services blog. See the original post [here](#).

Flint, Michigan is in the midst of a serious public health crisis, with high levels of lead in its water supply. President Obama signed an emergency declaration on Saturday, ordering federal assistance to support state and local response efforts.

With the emergency declaration in place, the U.S. Department of Health and Human Services (HHS) has now been designated the lead federal agency responsible for coordinating federal government response and recovery efforts.

This means that HHS will, in collaboration with the Federal Emergency Management Agency (FEMA), identify and mobilize the capabilities of the rest of the federal partners – including the Small Business Administration, the Environmental Protection Agency (EPA), and the Departments of Housing and Urban Development (HUD), Education and Agriculture (USDA) -- that are already working to help residents in Flint.

The goal of the federal response will be to help state and local leaders identify the size and scope of the problem, and work with them to make and execute a plan for mitigation of the short- and long-term health effects of lead exposure.

HHS will have a team on the ground in Flint this week. The team will be led by Dr. Nicole Lurie, HHS Assistant Secretary for Preparedness and Response (ASPR). Dr. Lurie will begin engaging with state and local officials today and will travel to Flint tomorrow.

In order to fully leverage the Department's strengths, the HHS team will include HHS Acting Assistant Secretary for Health Dr. Karen DeSalvo, whose office manages the President's Task Force on Environmental Health and Safety Risks to Children, and who will be the primary interface with state and local public health officials. Two U.S. Public Health Service Commissioned Corps officers will also help with the day-to-day responsibilities in Flint.

While HHS will now take on a more prominent role in helping state and local officials respond to this public health crisis, the agency has already been actively engaged in response and recovery efforts, including:

- Providing, at the State of Michigan's request, a range of technical assistance to state and local health departments, public health practices for medical professionals, and public health communications;
- Working with HHS grantees in the area to disseminate public health education through Head Start and Community Health Centers programs, administered by HHS's Administration for Children and Families and Health Resources and Services Administration, respectively;
- Providing technical assistance related to case management processes and interventions for children with high blood lead levels and interpretation of blood lead levels in adults; and
- Using existing resources to help the state identify vulnerable populations in Flint who may need further targeted outreach.

FEMA, EPA, HUD, and USDA are also actively engaged in existing response and recovery efforts.

- FEMA is providing bottled water and filters to Flint. The agency has already provided approximately 71,200 liters of bottled water for distribution to Flint residents.
- EPA is working with state and local officials to reduce lead levels in tap water and provide safe drinking water to the residents of Flint. EPA is also conducting a comprehensive audit of the Michigan drinking water program and a detailed review Michigan's implementation of the Safe Drinking Water Act in Flint. In October 2015, EPA established a task force to provide recommendations to the State of Michigan and the City of Flint to re-optimize corrosion control as soon as possible and to prepare for the planned switch to water supplied by the Karegnondi Water Authority in 2016
- HUD is working closely with the city on economic development and interagency coordination. They have successfully assisted the city with the purchase and installation of water filters. HUD had an existing lead hazard grant to Flint, targeted to lead paint, \$325,000 of which could be used for addressing the water lead contamination. Additionally, HUD has provided a data tracking and reporting system for the State of Michigan to use in its lead investigations.
- USDA has waived requirements on potable tap water availability at school meal service, allowing schools to provide bottled water. The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) is also allowing participants to use WIC vouchers for ready-to-feed infant formula, which does not need to be mixed with water, and participants can also swap powdered formula for ready-to-feed formula.

HHS will provide more details about future federal response and recovery efforts after the HHS team gets on the ground and has a chance to further engage with state and local officials. In the meantime, the Department will continue to work with state and local officials to determine how the federal government can best provide further assistance.

GLADWIN – On Dec. 11, 2015, Mid-Michigan Medical Center-Gladwin hosted the Gladwin County Leadership Program 2015-2016 participants in their community education room. The day was organized by Sarah Kile, Executive Director, 211 Northeast Michigan, who is also a graduate of the Leadership program. The purpose of the December module was to have a better understanding of the many different health, community and human service organizations in Gladwin County. While learning about the services they offer, participants also had the opportunity to learn about volunteer opportunities and ways to get involved in Gladwin County.

During the day, speakers from 211 Northeast Michigan, Clare/Gladwin County United Way, Gladwin Rotary, Gladwin County Department of Health and Human Services, Gladwin County American Legion, Mid-Michigan Big Brothers/Big Sisters, and Mid-Michigan Medical Center. One highlight of the day was when participants learned about the hospital and were taken on a guided tour by Julie Wright, Community Education Coordinator at Mid-Michigan Medical Center-Gladwin. A continental breakfast and lunch were hosted by MidMichigan Medical Center-Gladwin.

Flint water crisis: Michigan governor asks for \$28 million

CNN – January 19, 2016, By Dana Ford, Elliott C. McLaughlin and Emily Smith

(CNN)Michigan Gov. Rick Snyder vowed to do everything in his power to solve the Flint water crisis, asking legislators for \$28 million to fund a series of immediate actions.

[Read Snyder's plan](#)

He also apologized for the crisis during his annual State of the State speech Tuesday night.

The Republican governor has become a lightning rod for criticism because the crisis unfolded under the state's watch.

"To begin, I'd like to address the people of Flint. Your families face a crisis, a crisis you did not create and could not have prevented," Snyder said. "I am sorry and I will fix it."

The additional money would go to help fund the following, the governor said:

- Bottled water, filters, replacement filters;
- Assistance to Flint to help with utility-related issues;
- Testing and replacing fixtures in schools and other high-risk locations;
- Treatment of children with high lead levels;
- Services for the treatment of potential behavioral health issues;
- Support for children and adolescent health centers;
- An infrastructure integrity study for pipes and connections.

Snyder spoke about the long-term consequences of the crisis, saying the \$28 million request won't be the last budget request for Flint.

He also released a detailed timeline of steps officials have taken already and announced he will be releasing his 2014 and 2015 emails related to the crisis.

[See the timeline](#)

"No citizen of this great state should endure this kind of catastrophe. Government failed you -- federal, state and local leaders -- by breaking the trust you placed in us," Snyder said.

"You deserve better. You deserve accountability. You deserve to know that the buck stops here with me. Most of all, you deserve to know the truth."

The governor's address did little to quiet his critics.

"For those who think \$28 million will begin to remedy the Flint water crisis, that is a fraction of the money city residents have paid for poisoned water that they cannot drink," said Democratic U.S. Rep. Dan Kildee.

Flint Mayor Karen Weaver has previously said the costs to undo the damage, both to infrastructure and residents' health, could be between \$1 billion and \$1.5 billion.

"Flint deserves an immediate response equal to the gravity of this ongoing public health emergency. A state-appointed emergency financial manager created this problem and the state must step up and do more to help Flint families and children right now," Kildee said.

Outside where the governor spoke in Lansing, protesters gathered and demanded that Snyder step down.

Tomeko Hornaday has been a resident of Flint for some 40 years. She said what's happened there is an embarrassment.

"Just to see the city of Flint just go down for the last decade, you know, with the crime, with no jobs, all the way down to us not having any water," Hornaday said. "We're angry. We want something done."

Easily averted?

In April 2014, the state, which had appointed an emergency manager to Flint amid a financial crisis, decided to temporarily switch Flint's water source to the Flint River as a cost-saving measure until a new supply line to Lake Huron was ready.

How tap water became toxic in Flint

The Flint River had long had a reputation for nastiness when the state made the switch, and a 2011 study had found that before water from the Flint River could be considered potable, it would need to be treated with an anti-corrosion agent, a measure that would have cost the state about \$100 a day.

Experts say that water treatment would have prevented 90% of the problems with Flint's water.

After the switch, residents complained their water looked, smelled and tasted funny.

Virginia Tech researchers found the water was highly corrosive. A class-action lawsuit filed last year alleges the state Department of Environmental Quality didn't treat the water for corrosion, in accordance with federal law, and because so many service lines in Flint are made of lead, the noxious element leached into the water of the city's homes.

The city swapped back to the Lake Huron water supply in October, but the damage was already done to the lead pipes. The state is now handing out filters and bottled water with the help of the National Guard.

5 things to know about Flint's water crisis

'No-good water'

An attorney representing Flint residents who are suing Michigan officials over what his legal team calls the city's "lousy, no-good water" has a message for state officials targeted in the lawsuits: "Don't fight it."

The state is responsible for the water woes Flint residents have suffered and continue to suffer as a result, and the only responsible thing the state can do is own up to it, attorney Michael Pitt said.

"If you make the mess, you clean it up," he said. "I'm reminding our elected officials of what my kindergarten teacher told me."

The three lawsuits seek individual damages for Flint residents -- an estimated 500 and counting -- who have complained of health issues and worry about future ailments as a result of the state swapping the city's water source from Lake Huron to the notoriously filthy Flint River in 2014.

Bill Goodman, another member of the legal team, explained to reporters the purpose of the three lawsuits: The federal lawsuit filed in November addresses alleged violations of the U.S. Constitution; the suit filed last week in the Michigan Court of Claims targets alleged violations of the state constitution; and the suit filed in Genesee County Circuit Court deals with what he called "grossly negligent actions by government officials."

'Stuff is revealed'

During the discovery process, Goodman said, attorneys and their clients should receive within six weeks emails and other documents from various government officials, including Snyder, that could shed light on a critical yet heretofore unanswered question: How the heck did this occur?

"We finally find out what happened. Stuff is revealed that hasn't been revealed," he said.

Pitt added that the response to the federal lawsuit is due February 1, and that may provide some answers, but he encouraged state leaders to act promptly in providing money to residents who have been inconvenienced, sickened or worse by the water debacle.

"They need financial aid. Water's great. Filters are great," he said. "But our people need financial aid, and they need it now."

He further lambasted state officials who, he alleged, learned of elevated lead levels in children's blood in 2014 and did nothing.

"They were staring at a public health emergency, and they sat on it for over 10 months," he said, further criticizing leaders who assured residents the water was safe when they knew it wasn't true.

"I don't know how many kids were poisoned because of these false assurances, but we're going to find out."

'Operation Flint' underway in Taylor

FOX 2 Detroit – January 19, 2016, By Roop Raj

TAYLOR, Mich. (WJBK) - It's Taylor's turn to help Flint, hammering away to help a problem happening almost 60 miles away.

It's a big day in the ongoing Flint water crisis. Mayor Karen Weaver is flying to Washington to ask for a disaster declaration from the federal government, which would free up tens of millions of dollars which would fix the pipes which have been feeding lead to the people of her city.

Right now, FEMA is helping with \$5 million to buy water and filters for people. That cash will likely dry up by April, which makes the water bottle donations that much more critical.

"I brush my teeth; wash my face; shave; you take that kind of thing for granted and you think about those poor people in Flint and what are they doing? They can't take a bath; they can't drink water; they can't cook without a fear of lead being in the water," says Gordon Daisy from Home Depot. The semi truck will be in front of the Home Depot on Telegraph and Goddard until Friday from 6 a.m. - 10 p.m. for water bottle case donations.

The water drive Tuesday morning started the same time as a class action lawsuit was filed against Gov. Snyder; Darnell Earley and Jerry Ambrose, former emergency managers of Flint; the Michigan Dept. of Environmental Quality (MDEQ); the Mich. Department of Health and Human Services (MDHHS); Genesee County; and other government officials. You can read more on that here.

Flint Water Crisis: What's Being Done to Help Children Exposed to Lead

ABC News – January 19, 2016, By Gillian Mohnhey

As the contaminated water crisis continues in Flint, Michigan, health experts said they are working to ensure the youngest victims do not suffer through a lifetime of health effects from the exposure.

Lead is a known neurotoxin and is particularly harmful to young children whose neurological systems are still developing. Early lead exposure can have a lifetime of consequences, including lowered IQ, behavioral issues and developmental delays among others, according to the U.S. Centers for Disease Control and Prevention.

In Flint, researchers found that the incidence of children with elevated lead levels in their blood more than doubled after the water crisis began, according to a study published in the American Journal of Public Health in December.

Flint Water Crisis Prompts Girl Scouts to Write to Michigan Governor

Michigan Police Go Door to Door During Water Crisis

Water Bottles Handed Out During Water Crisis in Flint, Michigan

Dr. Mona Hanna-Attisha, a pediatrician in Flint and lead author of the study, said she sees the emotional effects of the water crisis every day as she takes lead level readings in children.

"We have a community-wide trauma," Hanna-Attisha told ABC News in an earlier interview about parents' bringing in children to be tested, and seeing in "a mom's eyes" the uncertainty and concern over whether the children may develop disorders such as attention-deficit/hyperactivity disorder, or ADHD.

"They feel forgotten," Hanna-Attisha said of the parents that she sees.

Hanna-Attisha and other doctors at the Hurley Medical Center in Flint, Michigan, have been monitoring lead levels in children for years, even before the municipal water supply switch was announced in March 2014 and implemented the following month. They found that 4.9 percent of the 737 children tested after the switch had elevated lead levels in their blood. This is a significant increase from the 2.4 percent of 736 children tested in 2013 before the switch.

As the water crisis continues, health experts said they are working to mitigate the long-term effects of lead exposure in the youngest residents, even if they can't reverse it. Hanna-Attisha along with others at the Hurley Medical Center are working with Michigan State University and the Genesee County Health Department as part of the Pediatric Public Health Initiative, announced last week.

The initiative includes cooking classes and an information pamphlet from MSU aimed at helping parents give their children food that will protect them from lead exposure. That's because a diet rich in iron, calcium and vitamin C "can decrease absorption and increase excretion," of lead, said Dr. Dean Sienko, associate dean of prevention and public health at MSU's College of Human Medicine.

MSU also plans to increase the number of people dispatched to Flint schools to support teachers, said Dr. Aron Sousa, interim dean of MSU's College of Human Medicine.

The initiative will focus on getting children with behavioral and developmental delays to specialists so they can benefit from early treatment right away, Sousa told ABC News.

A 2015 CDC panel on combating the effects of lead exposure suggested that early education programs such as Head Start or a high-quality pre-school program could help improve outcomes for children with lead exposure who have a high risk for developmental delays.

"That's the kind of thing that takes a little more time to develop," Sousa said.

These programs may be needed for years to decades as the true scope of lead exposure is revealed, Sienko said, noting that symptoms of lead exposure can appear five to 10 years after exposure, so it's important to get help to children early.

"It's trying to reverse what has happened here, where the insult has occurred," Sienko said. "One way to mitigate that is to have good development for that child to get them into education and stimulate things that are all positive things."

One major difficulty will be trying to determine just how many children were exposed to elevated lead levels and who is most at risk, Sienko said, noting that children are normally not tested for lead levels until they're a year old. However, a fetus can be exposed in utero or an infant during their first few months of life if their parents used tap water to give them formula.

Hanna-Attisha said her team is now testing cord blood, taken from a newborn's umbilical cord, to check for elevated lead levels.

A letter to families in Flint from the Michigan Department of Health and Human Services and the Genesee County Health Department advised parents to feed their children a diet high in iron and vitamin C, and urged parents to get children tested for lead levels immediately.

The Joint Information Center for the Flint Water Crisis did not immediately respond to requests for comment from ABC News on other measures being taken to combat lead exposure.

Elevated lead levels were found in the Flint water supply after the city disconnected from Detroit's water supply and began drawing its water from the Flint River in April 2014. It was intended as a stop-gap measure until the completion of a pipeline to Port Huron Lake as the source for Flint's municipal water.

But it was later discovered that lead from the old pipes had begun to leach into the water due to improper treatment of the water from the Flint River. And even though the supply was switched back to the Detroit water supply in October, the anti-corrosive chemicals that were used to stop the leaching have not yet been able to bring down the lead levels in the water, a state spokeswoman told ABC News last month.

'Everybody in the City Has Been Poisoned': New Class Action Lawsuits Filed Against Michigan Governor and Other Officials in Flint Water Crisis

People.com – January 19, 2016, By Tiare Dunlap

Two new class action lawsuits have been filed against Flint city officials and Michigan state officials for what plaintiffs are calling negligence in the Flint water crisis.

In a press conference Tuesday, it was revealed that Flint residents filed the suits against Michigan Governor Rick Snyder, Former Flint Emergency Managers Darnell Earley and Jerry Ambrose, Michigan Department of Environmental Quality, Michigan Department of Health and Human Services, Genesee County and other government officials believed to be blamed for the crisis, according to ABC News. A class action lawsuit had already been filed in Federal Court.

"Everybody in the city has been poisoned, everybody," plaintiff and Flint resident Keith Pemberton told Fox 2 Detroit.

On Saturday, President Barack Obama declared a state of emergency in Michigan and ordered federal aid for state and local response efforts in the city that has been facing lead-contaminated drinking water, Reuters reported.

The city's water issues began in April 2014 when it temporarily switched Flint's water source from Lake Huron to the Flint River as a cost-saving measure. Because the water from the Flint River lacked adequate treatment for corrosion, it drew lead out of the city's old water pipes, the *Detroit Free Press* reports. When the city switched back to Lake Huron as a water source, the damage to the city's pipes had already been done.

On Monday, Eden Wells, the state's chief medical executive, said that all children who drank the city's water since April 2014 had been exposed to lead.

There is no safe level of lead exposure, but young children and fetuses are most vulnerable to the permanent health effects, particularly affecting the development of the brain and nervous system, according to the World Health Organization. Pregnant women who are exposed to high levels of lead can experience miscarriage, stillbirth, premature birth and minor malformations.

"After 30 days, the lead leaves your blood stream and goes into the organs of your body," Pemberton said. "It takes about 10-15 years for it to do its maximum damage. We all got death sentences, simple as that."

Governor Snyder has apologized for the state's role in the crisis and called for the provision of water filters for the Flint community as well as longterm care for those who were affected by the lead, according to CNN.

However, pediatricians such as Mona Hanna-Attisha, who is credited with bringing the issue to the public's attention, fear that the children exposed to the elevated levels of lead will suffer lifelong consequences.

"If you were to put something in a population to keep them down for generation and generations to come, it would be lead," Hanna-Attisha told CNN. "It's a well-known, potent neurotoxin. There's tons of evidence on what lead does to a child, and it is one of the most damning things that you can do to a population."

Michigan governor asks Legislature for \$28.5 million for Flint

Detroit Free Press – January 19, 2016, By Kathleen Gray

LANSING, Mich. — Michigan Gov. Rick Snyder has asked the Legislature to approve an initial appropriation of \$28.5 million “to address Flint emergency needs.”

The administration is asking for action on the request by the end of January and expects to ask for more money in the future.

“Medium- and long-term needs are still being assessed and will be addressed in a future supplemental request,” according to a letter sent by state Budget Director John Roberts to the leadership in the House and Senate.

The \$28.5 million, mostly from the state’s general fund would be used for:

— \$935,000 for the hiring of nine additional school nurses for the Flint school district and funding to the Genesee Intermediate School District to hire two early service coordinators, a psychologist and a health professional to coordinate wraparound services for students and provide fresh fruits and vegetables to elementary students in Genesee County.

— \$5.7 million for water system needs, potential payment to the city of Flint to aid with utility issues, lab and testing costs, corrosion control procedures and an infrastructure integrity study using outside experts.

— \$17.2 million for bottled water, water filters and replacement cartridges; field operation costs for the Department of Health and Human Services, epidemiological analysis and case management for individuals with elevated blood levels, nutrition support and community education, support for child and adolescent health centers, assessment of potential linkages to other diseases, food inspections and crisis counseling.

— \$2 million to help pay for the replacement of plumbing fixtures in schools, child care and adult foster care centers, nursing homes, dialysis centers and surgery centers in Flint. — \$2 million to address funding needs for the Michigan National Guard’s role in providing support to the residents of Flint. — \$100,000 for the Michigan State Police to pay for the Flint Water Interagency Coordinating Committee.

The money request is the latest action taken by Snyder to address the ongoing crisis in Flint pertaining to the switch from the Detroit Water and Sewerage System in 2014 to drawing water from the Flint River. The switch, which was made without appropriate corrosion control measures being added to the treated water, resulted in lead leaching into some residents’ homes and businesses, and elevated lead levels in the blood of some Flint residents. - See more at: <http://amestrib.com/news/michigan-governor-asks-legislature-285-million-flint#sthash.eV3Xoxns.dpuf>

Flint returned to the Detroit water system in October and Snyder declared a state of emergency in the city Jan. 5. President Barack Obama declared a federal emergency for the city on Saturday.

The House Appropriations Committee is expected to take up the appropriation request on Wednesday.

Water bill forgiveness? Lawsuit seeks to void Flint charges since April 2014

MLive – January 19, 2016, By Ron Fonger

FLINT, MI -- Flint residents who have filed two new class-action lawsuits want water bills issued since April 2014 ruled null and void because customers got water that was "defective, dangerous and unfit" to drink.

"We are seeking for the court to declare that all the bills that have been issued for usage of water invalid because the water has not been fit for its intended purpose," said Trachelle Young, one of the attorneys representing four Flint families in separate lawsuits filed today in Genesee Circuit Court, last week in the Michigan Court of Claims, and in November in U.S. District Court.

"Essentially, the residents have been getting billed for water that they cannot use," Young said in a news conference today, Jan. 19. "Because of that, we do not feel that is a fair way to treat the residents."

The request for the preliminary injunction is part of the Circuit Court lawsuit filed today, naming the city of Flint, state Receivership Transition Advisory Board and individual city and state officials as defendants.

Gov. Rick Snyder, former emergency managers Jerry Ambrose and Darnell Earley and other agencies of state government are named as defendants in the Court of Claims lawsuit.

Each of the complaints are filed as class action lawsuits.

The families who have filed the lawsuits claim city and state officials supplied highly toxic water to Flint residents because it was cheaper than continuing to purchase Lake Huron water from the city .

Complaints say the city and state were grossly negligent in making or approving the decision to substitute a safe water supply for "highly corrosive and unsafe water from the Flint River."

Snyder Press Secretary Dave Murray said the Governor's Office has not received the lawsuits and declined to comment, saying it would "inappropriate for us to discuss pending litigation."

"We remain focused on the health and safety of the people of Flint, and tonight (Jan. 19), Gov. Snyder will discuss during his State of the State Address his plans to make the city stronger," the statement says.

Attorney Michael L. Pitt said the lawsuits will require Snyder to answer questions that have not been answered so far and turn over documents that have been shielded from release.

"We're going to get those emails" related to the Flint water crisis from the Governor's Office, Pitt said in today's news conference. "We are going to demand them as a part of discovery.

"There are going to be hard questions posed to these public officials," he said.

The lawsuits seek damages for the alleged personal injuries and physical damages suffered by residents during the city's water crisis, which began with the decision to use the Flint River as a temporary source of drinking water starting in April 2014, while the city was being run by a state-appointed emergency manager.

After the change in water source, Flint's water supply was hit with bacteria contamination and boil water advisories, elevated levels of total trihalomethanes (TTHM) and violations of the Safe Drinking Water Act, and increasing levels of lead.

Last week, Snyder announced that public health officials have also been investigating a possible connection between an outbreak of Legionnaires' disease in Genesee County and Flint River water.

The governor declared a state of emergency in Genesee County on Jan. 5, and last week President Barack Obama signed an emergency declaration opening the door for federal aid to deal with Flint's water crisis.

State of State: Gov. Snyder pledges to release emails on Flint water crisis

MLive – January 20, 2016, by Brian McVicar

Under fire by his critics, Gov. Rick Snyder pledged Tuesday night to release his emails related to the Flint water crisis.

Snyder, in what observers said is the most important speech in his career, said his office would make his emails in 2014 and 2015 available on Michigan.gov starting Wednesday.

That step, Snyder said, would ensure that residents have answers about "what we've done."

"You deserve better, you deserve accountability, you deserve to know that the buck stops with me," he said, prior to making the announcement.

Snyder also went through a timeline and list of what steps the state has taken to prevent the crisis. He said he would take steps to add more National Guard troops on the ground to "ensure that every home we need to visit gets visited as soon as possible."

Addressing the missteps that led to the water crisis, Snyder discussed failures by the Michigan Department of Environmental Quality (DEQ) and the federal Environmental Protection Agency (EPA).

He said the agencies began communicating about lead concerns in the Flint water supply in February 2015, but both were "ineffective in fully addressing and solving the problem."

"DEQ misinterpreted the water safety regulations and EPA did not act with sufficient urgency to address the concerns of one of its experts about DEQs approach and the risk of lead contamination," Snyder said.

Snyder declared a state of emergency for Genesee County on Jan. 5, and on Saturday, President Barack Obama approved Snyder's request for an emergency declaration in Flint, a move that frees up to \$5 million in federal aid to be used to provide residents with safe, clean water.

In a cost cutting move, Flint switched its water source in April 2014 from the Lake Huron, treated by the Detroit Water and Sewerage Department, to the more corrosive and polluted Flint River. Because the state failed to require the use of corrosion controls, lead leached into the water from pipes and fixtures.

Following the switch, residents complained of the water's smell, taste and color, with some saying the water caused rashes and hair loss. Independent researchers who raised red flags about the water said it contained unsafe levels of lead were initially ignored by the state. Their findings were later confirmed by the state.

Snyder also addressed steps his office took in response to concerns raised by residents about lead in the water.

In July 2015, Snyder said his office "proactively" asked about the "quality of Flint's water, test results and blood testing."

He said the DEQ told his office e that Flint was in compliance with the lead and copper rule. He said the department told his office "there was one concern with one house that was corrected and that there was nothing widespread to address."

In addition, Snyder said, the Michigan Department of Health and Human Services told his office that elevated blood lead levels "were to be expected because they follow a normal seasonal trend."

"These conclusions," Snyder said, "were later shown to be incorrect when the Department of Health and Human Services conducted a deeper analysis of the relevant data."

In mid-October, Flint reconnected to the Detroit water system after a "do not drink" advisory was issued by Genesee County on Oct. 1. The move cost about \$12 million and was funded with \$6 million from the state, \$2 million from the city of Flint and \$4 million from the Flint-based Charles Stewart Mott Foundation.

The crisis grew more complicated last week when state officials announced a spike in Legionnaires' disease, a severe form of pneumonia, in the Flint area between June 2014 and November 2015. Officials say it's unclear whether the spike -- 87 cases, 10 of which resulted in death -- is connected to the contaminated water that's led to elevated lead levels in Flint residents.

[\\$28M Flint aid bill approved by Michigan House committee](#)

MLive – January 20, 2016, By Emily Lawler

LANSING, MI -- A day after the Gov. Rick Snyder administration proposed a \$28 million solution to address immediate problems for the Flint water crisis, the House Appropriations Committee Wednesday gave its stamp of approval.

The State Budget Office is requesting a supplemental appropriation for the current fiscal year that would use \$22 million in state money plus some federal money to direct \$28 million to address immediate needs in the city of Flint. It allocates state funding to six department and would enable the state to increase national guard efforts, increase nurses in schools and replace fixtures in some public places.

"There's been a lot of short term needs, really immediate needs, that can't really wait for another budget cycle to come through and another budget process to address," said sponsor Rep. Phil Phelps, D-Flushing.

The committee approved the bill unanimously with one revision.

Rep. Pam Farris won an amendment that would expand children eligible for follow-up services to those who aren't currently testing for elevated blood lead levels, since by nature those can change when a person is exposed to lead.

Representatives on the committee had questions about some of the appropriations. Rep. Jeff Irwin, D-Ann Arbor, said he was happy to hear the appropriations would fund additional lead abatement efforts. Department of Health and Human Services Chief Deputy Director Tim Becker said the department's lead abatement teams would be abating fixtures and faucets "in addition to the normal abatement work that we would typically do in a home for lead."

Michigan State Police Capt. Chris Kelenske said the priority on the ground in Flint right now is visiting every home to make sure they have filters and bottled water.

Next the bill will go before the full House for consideration. House and Senate leaders on Tuesday said the bill would move quickly through the legislative process.

The White House has appointed a coordinator to help city of Flint, Michigan, deal with its water crisis

US News – January 19, 2016, By The Associated Press

WASHINGTON (AP) — The White House is appointing a Health and Human Services Department official to lead federal efforts to help the city of Flint, Michigan, deal with its water crisis.

White House spokesman Josh Earnest says he anticipates that President Barack Obama will meet with the city's mayor on Tuesday.

Mayor Karen Weaver had already visited with the president's senior adviser, Valerie Jarrett, earlier in the day.

Earnest says state and local officials are responsible for managing the response. He says an assistant secretary at the department, Nicole Lurie, will coordinate federal help.

The crisis began in 2014 when a state-appointed emergency manager switched Flint from Detroit water to Flint River water to save money. Flint returned to the Detroit system after elevated lead levels were discovered in children.

7 Facts on Flint's Water Crisis

Essence – January 20, 2016, By Lauren Porter

Flint, Michigan, is in the midst of a crisis because of a contaminated water supply.

For two years, a threat has been imposed upon residents and is now in the forefront of the nation's attention. Unhealthy drinking water has plagued the community by disrupting the health and livelihood of thousands of people. While some claim corruption, others just demand a call to action, righting the wrongs that have disrupted the lives of many.

Here are things to note about the situation so far:

1. Flint switched water sources in order to cut costs.

In April 2014, officials from the office of Michigan Gov. Rick Snyder approved funneling water from the Flint River for resident's supply, reports *CNN*. The change from Lake Huron, the town's previous water supply, provided a new water source that reportedly contained more salt and flowed through corroded pipes that were pulling lead into the water stream.

2. Thousands of children have been exposed to lead.

According to census information as stated by *USA TODAY*, 8,657 children have been exposed to lead poisoning from

drinking the water since the first report of contamination. Local pediatrician Mona Hanna-Attisha told CNN that lead levels in toddlers doubled since the water supply change.

3. Presidential candidate Bernie Sanders called for Gov. Snyder's resignation.

Sanders called for the resignation, citing there were "no excuses" for the issues regarding the water crisis. On Saturday, the Vermont senator issued a statement, which said that "the Governor long ago knew about the lead in Flint's water. He did nothing. As a result, hundreds of children were poisoned [and] thousands may have been exposed to potential brain damage from lead."

On Sunday, Snyder tweeted, "Political statements and finger pointing from political candidates only distract from solving the Flint water crisis."

4. Three state of emergencies have been issued for the Michigan city.

NBC News announced that newly elected Mayor Karen Weaver and Gov. Rick Snyder both declared states of emergency in January 2016 for Flint residents. Snyder called in the help of the National Guard to deliver clean water to nearly 100,000 people.

President Obama issued a state of emergency and requested that FEMA deliver water, water filters, cartridges and water test kits to "save lives and to protect property and public health and safety, and to lessen or avert the threat of a catastrophe in Genessee County."

5. An estimated \$1.5 billion is the cost of repair for the city's damaged distribution system.

After warning residents to refrain from consuming water, Mayor Weaver said the city will partner with the state of Michigan to help repair the infrastructure of the water system, resolve the issue and to help the city move forward, the *Detroit Free Press* reported.

Gov. Snyder has asked for \$28 million in funds to provide, "bottled water, filters, replacement filters; assistance to Flint to help with utility-related issues; testing and replacing fixtures in schools and other high-risk locations; treatment of children with high lead levels; services for the treatment of potential behavioral health issues; support for children and adolescent health centers; [and] an infrastructure integrity study for pipes and connections.

6. Three lawsuits have been filed on behalf of Flint residents, including two class-action suits and a federal lawsuit.

ABC News reports that the suits were filed against Gov. Snyder, Michigan Department of Health & Human Services, the State Department of Environmental Quality, and government and county officials.

7. Celebrities have been vocal about the Flint water crisis.

The people of Flint deserve better. Flint is in a state of emergency & thank God the National Guard is able to deliver clean water.

— Earvin Magic Johnson (@MagicJohnson) January 19, 2016

Flint resident: 'We've lost public trust'

WCVB 5 ABC Boston – January 20, 2016,

FLINT, Michigan (CNN) —If Michigan Gov. Rick Snyder thought he'd calm fears and win over residents when he addressed the water crisis in Flint, he was wrong.

"I want Gov. Snyder to solve the problem and basically get up out of office," longtime Flint resident Tomeko Hornaday told CNN, echoing the sentiments of many of the governor's critics.

"We shouldn't have to be going through this; we shouldn't have to do this," she said. "This is an embarrassment to the city of Flint, first of all, and an embarrassment to our government and to our residents."

In his State of the State speech Tuesday night, Snyder vowed to do everything in his power to solve the crisis of toxic lead contamination in the city's tap water, starting by asking legislators for \$28 million to fund a series of immediate actions.

In 2011, the state took over control in Flint after a budget emergency, and state officials later decided to switch over the city's water system from Lake Huron to the Flint River temporarily to save money.

Snyder issued a heartfelt apology Tuesday night: "You deserve better. You deserve accountability. You deserve to know that the buck stops here with me. Most of all, you deserve to know the truth.

"No citizen of this great state should endure this kind of catastrophe," he said. "Government failed you -- federal, state and local leaders -- by breaking the trust you placed in us."

But Flint resident Patty Warner suggested there's little faith that public officials will fix this failure, given their track record.

"No one trusts anyone in Flint or Lansing," Warner told CNN. "Unfortunately, we've lost public trust."

Senator: 'There's no way to justify any of this'

In addition, Snyder is under fire for what's happening in Detroit, which the state of Michigan also took control of due to budget woes. Nearly all schools there shut down Wednesday after teachers, angry about what they call horrific conditions and subpar funding, staged a mass sickout.

Flint has drawn even more attention because of the potentially calamitous health risks, enormous costs to fix the problem and allegations state officials are responsible for the water crisis and took too long to step up.

And Snyder's address this week failed to convince his critics beyond Flint and Lansing.

"There's no way to justify any of this," said U.S. Sen. Debbie Stabenow, a Democrat from Michigan. "Every single decision was made by the governor and this state government. ... The state government has the legal and moral responsibility."

The state should spend more to fix Flint's problems, she said, especially at a time when it boasts a budget surplus of \$500 million.

Flint Mayor Karen Weaver has said the costs to undo the damage, both to infrastructure and residents' health, could be between \$1 billion and \$1.5 billion.

Democratic U.S. Rep. Dan Kildee called the figure Snyder proposed "a fraction of the money city residents have (already) paid for poisoned water that they cannot drink." And Stabenow said it would barely make a dent in paying for new water pipes that are needed to replace damaged ones.

"There's not a major commitment to make sure dollars go to fix this quickly," the senator told CNN's "New Day" on Wednesday. "And I continue to be stunned as we look at the slow walking of the state."

The Environmental Protection Agency is now looking at Michigan's entire drinking water program and how the Safe Drinking Water Act was implemented there. Its findings could add to the state's total price tag to address potential water woes.

These investigations follow the EPA's criticism about what it calls state and local authorities missteps in Flint.

The agency said in a statement, "What happened in Flint should not have happened."

Lead poisoning a major concern

The problems began in April 2014 when the state decided to switch Flint's water source temporarily to the Flint River as a cost-saving measure until a new supply line to Lake Huron was ready.

The Flint River had a reputation for nastiness when the state made the move. A 2011 study found that water from the Flint River could be considered potable if treated with an anti-corrosion agent -- a measure that would have cost the state about \$100 a day.

After the switch, residents complained their water looked, smelled and tasted funny.

Virginia Tech researchers found the water was highly corrosive. A class-action lawsuit filed last year alleges the state Department of Environmental Quality didn't treat the water for corrosion, in accordance with federal law, and because so many service lines in Flint are made of lead, the noxious element leached into the water of the city's homes.

Officials initially brushed off concerns, insisting the water was safe. But the tide turned in October, with the city moving back to Lake Huron for water.

By then, the damage was already done.

Cleaning up the tap water and upgrading infrastructure aren't the only big costs that loom. In addition to investigations by the EPA, local U.S. attorney's office and Michigan's attorney general's office, at least three lawsuits have been filed. Those suits seek individual damages for Flint residents -- about 500 and counting -- who have complained of health issues and worry about future ailments.

Snyder announced last week that the number of Legionnaires' disease cases in Genesee County spiked in the last two years, though another state official noted that not all those sickened drank Flint water.

Another big concern is lead poisoning. It can severely affect mental and physical development, especially in children for whom the Centers for Disease Control and Prevention notes there's "no safe blood lead level."

"Once the lead is in your body, it never leaves," Stabenow said. "It's horrible."

Rhonda Kelso, a plaintiff in one of the lawsuits, called the situation "unconscionable."

"You really don't want to think about it; you want to block it out of your mind," she told CNN.

Following the paper trail

During the discovery process, lawyers said, attorneys and their clients should receive emails and other documents from government officials, including Snyder, that could shed light on a critical yet heretofore unanswered question: How the heck did this occur?

Pitt said Michigan's Department of Health and Human Services knew about elevated blood lead levels as far back as September 2014 "and sat on this information for 10 months."

"At a certain point, I think they were ashamed, embarrassed and humiliated," the lawyer told CNN's "New Day" on Wednesday. "They were not responding in a proper way, and when they were confronted, they still denied it."

Beyond whatever the official investigations find out, Pitt said that citizens taking action in the courts will lead to answers.

"It is pernicious," he said. "And the lawsuits are going to get to the whys (that) these individuals did it."

The ordeal has cast a cloud over Flint, a blue-collar city of about 100,000 that's been through tough times before -- but nothing like this.

"We take things for granted," said Ken Van Wagoner, owner of Flint's Good Beans Cafe coffee shop. "We're always sure until someone tells you things aren't right."

More class action lawsuits filed against Michigan, Snyder over lead-tainted water

Legal Newsline – January 20, 2016, By Jessica Karmasek

DETROIT (Legal Newsline) - Three class action lawsuits now have been filed against Michigan Gov. Rick Snyder and various state agencies and officials over the City of Flint's ongoing water crisis.

This month, a group of Flint residents filed two new class actions against Snyder, the Michigan Department of Health and Human Services, the state Department of Environmental Quality and former Flint emergency managers Darnell Earley and Jerry Ambrose, and Genesee County.

The Genesee County Circuit Court lawsuit, filed Tuesday, asks Judge Archie Hayman to enjoin the City of Flint from water shut-offs and that he declare Flint water users are not required to pay past or future bills for "useless and harmful" water.

In the Michigan Court of Claims case, filed Friday, the injured citizens seek to hold the State financially accountable for the "man-made catastrophe."

Those class members who owned property in the city are claiming an "unjust and unconstitutional taking" of their property without fair compensation. Known as an inverse condemnation action, the State, by its actions, destroyed or impaired the property values in Flint and must be held accountable to cover the losses in property value, the lawsuit alleges.

In April 2014, Flint -- located 60 miles northwest of Detroit -- switched its water supply from Lake Huron to the Flint River in an effort to save money. However, it was only supposed to be temporary until a new water line to Lake Huron could be built.

Last year, two independent studies revealed lead poisoning caused by the improperly treated water was found in the area's population.

The new class actions focus on the conduct of the MDHHS, attorneys for the residents say.

The attorneys contend the agency had in its possession from June through September 2014 reports that indicated a dramatic increase in elevated blood lead levels of the children of Flint, and it knew that the spike correlated with the exposure to the lead-laced Flint River drinking water.

"The Department had information that there was a public health emergency yet sat on the information for more than 10 months. The lead poisoning of many of Flint's children could have been avoided if the Department had shared with the

public this vital information,” attorneys from Royal Oak, Mich., law firm Pitt McGehee Palmer & Rivers PC said in a statement.

The new class actions also focus on the serious harm allegedly caused by the prolonged and repeated false assurances made by public officials that the Flint River water was safe to drink and use.

The false assurances caused many people to experience serious health effects when they unnecessarily consumed toxic river water -- serious health conditions that could have been avoided by simply telling the public the truth about the toxicity of the water they were encouraged to drink, the attorneys argue.

The complaints also point out similar behavior on the part of the MDHHS in not reporting a major spike in the outbreak of Legionnaires’ disease. The disease is a type of rare pneumonia caused by Legionella bacteria, which is found naturally in fresh water.

“Tens of thousands of Flint residents were unnecessarily injured and hundreds of millions of property damage resulted due to the deliberate indifference of a handful of state, city and county officials,” Michael Pitt, co-counsel for the plaintiffs, said in a statement.

“Public officials must never again be permitted to give assurances to the public about public health conditions when they know the assurances are false. Public officials must never again be permitted to ruin the lives of our children by remaining silent in the face of a public health emergency.”

Detroit law firm Goodman & Hurwitz PC, Flint firm Trachelle C. Young & Associates and the Law Offices of Deborah A. LaBelle in Ann Arbor also are representing the Flint residents.

The first class action was filed against Snyder, the State, the City of Flint, and various state and Flint municipal employees, for health and property damages resulting from their exposure, in November.

That complaint, filed in the U.S. District Court for the Eastern District of Michigan, alleges that the actions of 14 current or former state or Flint municipal employees endangered the health of city residents by exposing them to toxic, lead-tainted water.

According to the complaint, the defendants’ actions “deprived Plaintiffs of life, liberty and property without due process of law when they took from Plaintiffs safe drinking water and replaced it with what they knew to be a highly toxic alternative solely for fiscal purposes.”

The complaint details the experiences of several Flint residents and families exposed to the water resulting in serious physical and psychological injuries to many of the plaintiffs. These include high levels of lead in their bloodstreams; skin lesions and hair loss; chemically-induced hypertension; autoimmune disorders; seizure-like convulsions; depression; and chronic anxiety.

The November lawsuit requests that the plaintiffs and all class members be compensated for the physical injuries and property damages resulting from their prolonged exposure to the lead-tainted water.

The 30-page complaint also asks that the State undertake a wide spectrum of future corrective action, including lifetime medical monitoring for all the children injured by the tainted water.

“Since the claims of these families are grounded in the 14th Amendment of the U.S. Constitution, all provisions of the Michigan Governmental Immunity will have no bearing whatsoever on the viability and the power of these claims,” Bill Goodman, co-counsel for the plaintiffs, said in a statement. “These constitutional violations will be redressed by the Constitution itself and, in no way can they be held hostage to state immunity doctrines.”

Pitt said in November that the action is about holding the responsible governments and officials accountable for the catastrophe -- "which didn't have to happen," he noted.

Snyder has said he didn't initially know the severity of the situation.

Once aware, he requested funding to switch the source back to the Great Lakes Water Authority and appointed an independent task force to identify possible missteps and areas for improvement.

"I want the Flint community to know how very sorry I am that this has happened," Snyder said in a statement last month. "And I want all Michigan citizens to know that we will learn from this experience, because Flint is not the only city that has an aging infrastructure."

Obama adviser: Federal government working to assist Flint

9 & 10 News – January 20, 2016

DETROIT (AP) - A top adviser to President Barack Obama says the federal government is doing what it can to assist the city of Flint and the state as all rally to deal with the water crisis there.

Cecilia Munoz heads up the group that coordinates the White House's domestic policy-making process.

She said Wednesday during a trip to Detroit that the "federal government will be there to support the people of Flint."

Munoz called what's happening in Flint "a public health crisis" and said it's fitting that a doctor from the U.S. Department of Health and Human Services has been placed in charge of a federal team tasked with providing support to the effort in Flint.

On Saturday, President Barack Obama signed an emergency declaration for Flint. He's traveling Wednesday to Detroit.

Flint Emails: Gov. Rick Snyder's Aide Called Crisis 'Political Football'

NBC News – January 20, 2016, By Lisa Riordan Seville, Hannah Rappleye and Tracy Connor

Michigan Gov. Rick Snyder's chief of staff told him in an email that the city of Flint was responsible for the water poisoning crisis and he couldn't figure out why the state was being blamed for a situation that was becoming a "political football."

The note -- part of a cache of emails released Wednesday by Snyder and reviewed by NBC News -- was sent on Sept. 25, 2015, as it became clear that thousands of people in the city had been exposed to lead in their drinking water.

"The issue of Flint water and its quality continues to be a challenging topic," chief of staff Dennis Muchmore wrote.

He said the state Department of Environmental Quality and the Department of Community Health "feel that some in Flint are taking the very sensitive issue of children's exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state."

Muchmore, who recently announced he is moving into the private sector, went on to write that Snyder should agree to a call with Flint's congressman because otherwise "it will just fan the narrative that the state is ducking responsibility."

"I can't figure out why the state is responsible," Muchmore added, but noted that the state treasurer, Andy Dillon, had made the decision to switch Flint's water source to cut costs.

"So we're not able to avoid the subject," he wrote. "The real responsibility rests with the County, city and KWA," which was Flint's new water supplier.

In a briefing email to the governor the next day, Muchmore admits the water in Flint has had occasional "less than savory aspects," but says that officials have found no clear evidence of lead issues.

"Now we have the anti everything group turning to the lead content which is a concern for everyone, but DEQ and [the health department] and EPA can't find evidence of a major change." Residents are caught in a "swirl of misinformation," he adds.

Part of Muchmore's assessment was based on information coming out of the health department. That information from the state later turned out to be wrong.

Emails show officials there downplayed the findings of a local pediatrician, Dr. Mona Hanna-Attisha at Hurley Medical Center, who was one of the first to raise concerns about the high lead levels in children coming through her door.

In that same Sept. 26th email chain, GERALYN Lasher, a spokeswoman for the Michigan Department of Health and Human Services, says the agency is reviewing information sent over by the pediatrician but doesn't appear to put much stock in it.

"MDHHS epidemiologists continue to review the 'data' provided by a Hurley hospital physician that showed an increase in lead activity following the change in water supply," wrote Lasher.

"While we continue to review this data, we have stated publicly that Hurley conducted their analysis in a much different way than we do at the department. Hurley used two partial years of data, MDHHS looked at five comprehensive years and saw no increase outside the normal seasonal increases."

Despite continued skepticism about the scope of the lead issue, and the state's responsibility for it, Muchmore said the state was lending a hand in Flint.

"We can't tolerate increased lead levels in any event, but it's really the city's water system that needs to deal with it," he wrote on Sept. 26th. "We're throwing as much assistance as possible at the lead problem as regardless of what the levels, explanations or proposed solutions, the residents and particularly the poor need help to deal with it."

Within days, Snyder publicly addressed the crisis for the first time -- though it would be several more months before he would declare a state of emergency and ask for federal aid.

The release of the emails comes amid probes by state and federal prosecutors, lawsuits and calls for Snyder's resignation.

Snyder announced he would release the emails during his State of the State address Tuesday night in which he apologized to the people of Flint and pledged to fix the mess.

"Government failed you," Snyder said.

Michigan House approves \$28M in immediate assistance for Flint

MLive – January 20, 2016, By Emily Lawler

LANSING, MI -- The Michigan House of Representatives on Wednesday passed a \$28 million appropriation to help address immediate needs in Flint, including water filters and school nurses.

The House unanimously approved the bill with 106 yes votes. The bill was introduced by Rep. Phil Phelps, D-Flint, and garnered 96 co-sponsors.

"This step unites us all on the moral ground of doing the right thing for the families," Phelps said.

The bill moved quickly through the process, first surfacing on Tuesday ahead of the governor's State of the State address and shooting out of the House Appropriations Committee Wednesday morning.

It aims to address a water crisis in Flint that emerged when the city switched water sources. The change and subsequent infrastructure issues resulted in high blood lead levels in the city's children.

The broad-reaching request would use about \$22 million in state funding, with the remainder coming from federal sources. It would appropriate the following:

\$935,000 to the Department of Education to support hiring additional school nurses, providing Early On and special education services, providing nutritional snacks to elementary students.

\$5.8 million to support the Department of Environmental Quality in addressing water system needs and a potential payment to the city of Flint to 'aid with utility issues.'

\$17.2 million to the Department of Health and Human Services to support purchases of bottled water, field operations, epidemiological analysis and case management of individuals with elevated blood levels, nutrition support, crisis counseling and behavioral health issues.

\$2 million to the Department of Licensing and Regulatory Affairs for plumbing fixture replacements in schools, child care and adult foster care centers, nursing homes, dialysis centers and surgery centers in Flint.

\$2 million to the Department of Military and Veterans Affairs to support Michigan National Guard water support efforts and other responses in relation to the emergency declaration.

Gov. Rick Snyder praised the House's decision.

"I committed to fixing this for the residents of Flint, and it's great to see lawmakers from across the state join me in working to resolve the crisis. The unanimous vote demonstrates to the nation that all of Michigan is standing together help the people of Flint," Snyder said.

"My further commitment is this \$28 million is just one more step toward a long-term solution. There is more to come."

House Appropriations Chair Al Pscholka, R-Stevensville, recognized that this is likely one in a series of asks for Flint assistance.

"As I look at this I think there's some of this that can go till May, some of it can maybe make it till September. So we'll be constantly looking at that and I am sure that in the governor's budget recommendations coming out next month I think we'll have some appropriations for Flint as well that will be discussed in various departments," Pscholka said.

The legislature already appropriated \$9 million to reconnect Flint to its previous water system in October.

The bill heads next to the Senate, where Senate Majority Leader Arlan Meekhof said Tuesday it could move quickly as well.

"If we see the need is demonstrated, and I believe they have, we're going to make sure this gets done relatively soon," Meekhof said.

Under what's known as the "five-day rule" the Senate cannot vote on the measure until next week. The state constitution provides that a bill must be in legislators' hands for five days before it's passed.

Senate Minority Leader Jim Ananich praised the House's action, but said more was needed.

"This is a drop in the bucket compared to what it will take to comprehensively address the crisis, and we need to be doing more," Ananich said. "We know that early intervention is the key to reducing the negative impacts of lead exposure, and that includes better nutrition for families and preventative services for kids. The governor has promised more is coming, but Flint residents shouldn't have to wait any longer for the type of support everyone agrees they deserve."

Obama Declares State of Emergency in Flint Water Crisis

Ms. Magazine – January 20, 2016

President Obama has declared a state of emergency in Flint, Michigan after a water contamination crisis produced a spike in lead poisoning and other health issues, including possibly Legionnaire's disease, in the city. The declaration allows the Federal Emergency Management Agency (FEMA) to coordinate relief efforts and provide disaster aid, such as clean water, filters, and water test kits.

An estimated 9,000 children under six years old, in a city of only about 100,000 people, were exposed to lead after drinking poisoned water in Flint, and around 200 children are said to have "elevated blood lead levels." Lead poisoning in children can lead to low IQ and developmental problems, hearing loss, and learning difficulties, among other things. In adults, lead poisoning is linked to miscarriage or premature birth, low sperm count, pain, and decline in mental functioning.

Flint's problems began in April 2014 when Darnell Earley, an emergency manager appointed by Governor Rick Snyder, switched the city's water source from the Detroit Water and Sewerage Department to a local river in order to save money. Almost immediately, Flint's residents, who are predominately African-American, raised concerns about the water's smell, taste, and color. Snyder, the Michigan Department of Environmental Quality, and the Michigan Department of Health and Human Services repeatedly downplayed concerns about the water, despite being informed about abnormally high lead poisoning rates in Flint's children.

It was not until October of 2015-after a spate of studies showed an increase in lead levels in children-that Snyder announced that the city's water source would be transferred back to the Detroit system. Snyder did not declare a state of emergency until January 5, 2016, and even though Earley is no longer Flint's emergency manager, Snyder has appointed him to be the emergency manager of Detroit Public Schools-a school system plagued by underfunding and crumbling infrastructure.

Flint residents are now wondering what's next for them and their children. Michigan State University and Hurley Children's Hospital in Flint have planned to create programs that may help mitigate the effects of lead poisoning. Residents have also filed two class-action lawsuits against the city and state, and some are calling for Snyder's

resignation and/or his arrest.

Even as the Flint water crisis makes national headlines, residents - 40 percent of whom live in poverty - are being billed for the poisoned water and are being threatened with shutoffs if they do not pay.

Snyder e-mails: Aides figured Flint was others' problem

Detroit Free Press – January 20, 2016, By John Wisely, Paul Egan and Jennifer Dixon

Gov. Rick Snyder's staffers worried in September that the issue of lead in Flint's drinking water was being politicized and that the state's responsibility for the crisis was being exaggerated.

"I can't figure out why the state is responsible except that (then-treasurer Andy) Dillon did make the ultimate decision so we're not able to avoid the subject," Snyder's chief of staff Dennis Muchmore wrote to Snyder in a Sept. 25, 2015, e-mail.

He followed it up the next morning, writing: "The real responsibility rests with the county, city and KWA," referring to the Karegnondi Water Authority. "But since the issue here is the health of citizens and their children, we're taking a proactive approach."

Muchmore's e-mail came after a Hurley Medical Center pediatrician reported finding elevated blood lead levels in Flint children.

Muchmore's e-mails were included in 274 pages of Snyder's e-mails released today in the wake of the water crisis that has led protesters to call for the governor to resign. House Minority Leader Tim Greimel, D-Auburn Hills, said he was very disappointed with redactions in the e-mails and the fact Snyder only released what he said were his own e-mails, instead of all Flint-related e-mails to and from officials in the executive office.

The first e-mail in the file released by Snyder is from Michael Gadola, then Snyder's legal counsel, and includes 2 1/2 pages of blacked-out text. Most of the other redactions are of e-mail addresses.

"It's very disappointing to see the governor play these types of games," Greimel said.

Muchmore, who retired Tuesday as Snyder's chief of staff, told the Free Press that when he wrote that Dillon made the ultimate decision, he meant that the Flint emergency manager reported to Dillon and Dillon "signed off on it."

Muchmore said he was referencing Flint's decision to join the Karegnondi Water Authority, a new pipeline now under construction to Lake Huron. That decision was supported by the locals and the Flint City Council, which endorsed it with a 7-1 vote.

After the vote, Detroit notified Flint that it was terminating water service to Flint in 12 months, which prompted a scramble for an alternative source. A year later, Flint began drawing and treating water from the Flint River for distribution to the city. The river water immediately drew complaints of discoloration, odor and rust.

Dillon said in an e-mail to the Free Press he was initially reluctant to sign off on Flint moving to the KWA because he didn't think the change would save the cash-strapped city money. He said he changed his mind after he was told in a briefing with the Department of Environmental Quality that the new pipeline would be a cost-saver, and after determining that the Detroit water system was not prepared to give Flint a better deal.

"However, this was a different decision than the decision to use the Flint River," Dillon said. "I don't recall that decision coming to me."

Muchmore said Wednesday that the Flint River had always been the backup water source and while there was some disagreement about the issue, no one really talked about the significance of using the river water until after it happened and complaints started pouring in.

"Everybody thought professionals will treat this water and they will make it good," Muchmore said today. "Andy ultimately signed off on the KWA because he felt it was acceptable financially, No.1, and the DEQ had signed off on the technical part of it, and more importantly, the local people wanted to do it."

The e-mails were released after Snyder made a pledge in his State of the State address Tuesday. Normally, the e-mails would not be disclosed publicly, but Snyder agreed to release them after pressure from the Detroit Free Press and others to make his communications public in the wake of the public health emergency.

In the e-mails, Muchmore wrote that U.S. Rep. Dan Kildee, D-Flint Township, was "engaged in his normal press hound routine" after the congressman issued a press release noting he'd asked the EPA to help the state deal with the crisis. Muchmore added that then-mayor Dayne Walling "went out on a CYA effort due to the election."

They also show doubts about returning Flint to the Detroit system and even questioning if the reports of higher lead levels are accurate.

"They can't reconnect to DWSD even if they wanted to as they sold the connector line," Muchmore wrote Sept. 26. "And, especially with the new rate increases in Detroit, their citizens would be less able to pay than they already are. Now we have the anti everything group turning to the lead content which is a concern for everyone, but DEQ and DHHS and EPA can't find evidence of a major change per Geralyn's memo below."

Muchmore was referring to a memo from Geralyn Lasher at the Michigan Department of Health and Human Services that said blood lead level data examined by Hurley Medical Center Dr. Mona Hanna-Attisha didn't match the state's data.

"Hurley used two partial years of data, MDHHS looked at five comprehensive years and saw no increase outside the normal seasonal increases," Lasher wrote. "The Hurley review was also a much smaller sample than MDHHS data as ours includes all hospital systems in Flint as well as outside laboratories. We have also provided the attached data chart that outlines if the elevated blood lead levels were being driven by a change in water, we would have seen the elevated levels remain high after the change in water source."

Three days later, Snyder received a daily briefing from staffers laying out the concerns in Flint. The first bullet point in the briefing noted that the most common cause of lead poisoning is from lead paint.

"Blood lead level testing results for the 12-month period just after the City of Flint changed its water source (May 2014-April 2015) showed no significant change in the pattern of blood lead levels in Flint, compared to the previous three years," Snyder was informed in the briefing. "This data suggests the recent change in water source by the City of Flint has not contributed to an increase in lead exposure throughout the community."

The briefing went on to estimate that it would cost "\$60 million or more" to replace the more than 15,000 lead pipes that connect water mains to homes.

Very little of the text in the body of the e-mails was written by Snyder himself. The bulk of the messages are staffers writing to Snyder.

On Sept. 2, Snyder received an e-mail from Harvey Hollins, his director of the office of urban affairs, informing him that 1,500 donated water filters were distributed in Flint within four hours and at least 200 more people wanted them. The name of the donor who provided the filters is redacted from the e-mails though Hollins acknowledged that they "do not want any publicity or credit for their donation the donation."

Snyder responded three days later: "Factually accurate update, but how did it go over with the residents?"

"It went over extremely well with the residents," Hollins replied. "There is a demand for more."

A week after Muchmore's e-mail saying Flint couldn't reconnect to Detroit's system, the city was exploring a way to do just that.

Snyder did weigh in on the financial aspects of reconnection.

"We should help get all the facts on the consequences of changing back vs. staying and then determine what financing mechanisms we have available," Snyder wrote in an Oct. 2 message to Muchmore, adding the administration needed "a clear side-by-side comparison of the health benefits and costs of (the Great Lakes Water Authority) vs. a more optimized Flint system. Also, we need to look at what financing mechanisms are available to Flint to pay for any higher cost actions. Please get people working on these two issues ASAP."

On Oct. 6, Snyder wrote: "We need a better update system re: Flint water," noting that he learned from the media that the Department of Health and Human Services announced the distribution of water filters.

"This should have come internally with more detail. I had press questions last night," Snyder wrote. "Overall, we should have a daily report on Flint until our recommendations are fully implemented."

Snyder then cited information he wanted including water test results, blood test results, the number of filters distributed and the analysis of proceeding with water from the Great Lakes Water Authority, the Flint River or the new authority.

The e-mails show that on Dec. 28, when given advance notice of the letter from the task force that Snyder appointed to look into the issue, which was highly critical of the DEQ, incoming chief of staff Jarrod Agen told Snyder that planned staff changes at the DEQ should be made "sooner rather than later," and that Snyder should accept Director Dan Wyant's resignation, which had apparently already been submitted but not accepted.

Agan also references moving ahead with the dismissal of three DEQ officials, which he said had been planned for Jan. 4. No such dismissals have been announced. DEQ Communications Director Brad Wurfel resigned the same day Wyant did. Earlier, the head of the drinking water section had been re-assigned, but not dismissed.

Snyder had to sign off on the release of the e-mails. The governor's office and Legislature are exempt from Michigan's Freedom of Information Act, which requires public disclosure of records related to government. Michigan is one of only two states that apply a blanket exemption to electronic communication from the governor's office and Legislature.

Greimel said the situation demonstrates why Michigan's FOIA should immediately be extended to cover both the governor's office and the Legislature.

Snyder has said he would not compel members of his administration to publicly release their e-mails.

Mich. governor's emails shine light on Flint water crisis

CNN – January 20, 2016, By Dana Ford, Greg Botelho and Joseph Netto

FLINT, Michigan (CNN) — Michigan Gov. Rick Snyder's then-chief of staff wrote an email in September that expressed concern the water crisis in Flint was being politicized, and argued the issue was not primarily the state's problem.

His email was made public Wednesday as part of the governor's release of his own emails regarding Flint from 2014 and 2015.

Snyder, a Republican, has become a lightning rod for criticism because the crisis unfolded under the state's watch.

"The DEQ (Department of Environmental Quality) and DCH (Department of Community Health) feel that some in Flint are taking the very sensitive issue of children's exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state," wrote Dennis Muchmore, Snyder's former chief of staff.

"The real responsibility rests with the county, city and KWA (Karegnondi Water Authority), but since the issue here is the health of citizens and their children we're taking a proactive approach putting DHHS (Department of Health and Human Services) out there as an educator," he said.

Snyder's emails are instructive because they show, at least in part, how officials responded to the growing concerns about toxic lead contamination in Flint's tap water.

The problems began in April 2014 when the state decided to switch Flint's water source temporarily to the Flint River as a cost-saving measure until a new supply line to Lake Huron was ready.

After the switch, residents complained their water looked, smelled and tasted funny. Virginia Tech researchers found the water was highly corrosive. But officials initially brushed off concerns, insisting the water was safe.

"The water certainly has occasional less than savory aspects like color because of the apparently more corrosive aspects of the hard water coming from the river, but that has died down with the additional main filters. Taste and smell have been problems also and substantial money has been extended to work on those issues," Muchmore wrote in another September email.

"Of course, some of the Flint people respond by looking for someone to blame instead of working to reduce anxiety. We can't tolerate increased lead levels in any event, but it's really the city's water system that needs to deal with it.

"We're throwing as much assistance as possible at the lead problem as regardless of what the levels, explanations or proposed solutions, the residents and particularly the poor need help to deal with it," he said.

The tide turned in October, with the city moving back to Lake Huron for water.

By then, the damage was already done.

Too little, too late?

The Michigan House of Representatives approved \$28 million in emergency funding on Wednesday, one day after the governor asking legislators for that amount to fund a series of immediate actions.

Critics say the figure is too little and too late.

"There's no way to justify any of this," said U.S. Sen. Debbie Stabenow, a Democrat from Michigan. "Every single decision was made by the governor and this state government. ... The state government has the legal and moral responsibility."

The state should spend more to fix Flint's problems, she said, especially at a time when it boasts a budget surplus of \$500 million.

Flint Mayor Karen Weaver, who was elected in November, has said the costs to undo the damage, both to infrastructure and residents' health, could be between \$1 billion and \$1.5 billion.

She told CNN's "The Lead with Jake Tapper" that the suggested \$28 million was simply not enough.

"It's a twofold kind of situation. We have an infrastructure crisis, but we have a public health crisis in the city of Flint right now," Weaver said. "We still can't drink our water."

Democratic U.S. Rep. Dan Kildee called the figure Snyder proposed "a fraction of the money city residents have (already) paid for poisoned water that they cannot drink." Stabenow said it would barely make a dent in paying for new water pipes that are needed to replace damaged ones.

"There's not a major commitment to make sure dollars go to fix this quickly," the senator told CNN's "New Day" on Wednesday. "And I continue to be stunned as we look at the slow walking of the state."

'This is an embarrassment'

Snyder tried to calm fears and win over residents by offering a heartfelt apology Tuesday night.

"I am sorry and I will fix it," he said during his annual State of the State speech.

"You deserve better. You deserve accountability. You deserve to know that the buck stops here with me. Most of all, you deserve to know the truth," the governor said.

But Flint resident Patty Warner suggested there's little faith that public officials will fix this failure, given their track record.

"No one trusts anyone in Flint or Lansing," Warner told CNN. "Unfortunately, we've lost public trust."

"I want Gov. Snyder to solve the problem and basically get up out of office," longtime Flint resident Tomeko Hornaday told CNN, echoing the sentiments of many of the governor's critics.

"We shouldn't have to be going through this; we shouldn't have to do this," she said. "This is an embarrassment to the city of Flint, first of all, and an embarrassment to our government and to our residents."

The Environmental Protection Agency is looking at Michigan's entire drinking water program and how the Safe Drinking Water Act was implemented there. Its findings could add to the state's price to address potential water woes.

These investigations follow the EPA's criticism about what it calls state and local authorities' missteps in Flint.

The agency said, "What happened in Flint should not have happened."

President Barack Obama echoed that sentiment when he spoke in Detroit on Wednesday, describing the crisis in Flint as a "terrible tragedy."

"I know that if I was a parent up there, I would be beside myself that my kids' health could be at risk," he said. "It is a reminder of why you can't shortchange basic services that we provide to our people."

Lead poisoning a major concern

Cleaning up the tap water and upgrading infrastructure aren't the only big costs that loom. In addition to investigations by the EPA, local U.S. attorney's office and Michigan's attorney general's office, at least three lawsuits have been filed. Those suits seek individual damages for Flint residents -- about 500 and counting -- who have complained of health issues and worry about future ailments.

Snyder announced last week that the number of Legionnaires' disease cases in Genesee County spiked in the last two years, though another state official noted that not all those sickened drank Flint water.

Another big concern is lead poisoning. It can severely affect mental and physical development, especially in children for whom the Centers for Disease Control and Prevention notes there's "no safe blood lead level."

"Once the lead is in your body, it never leaves," Stabenow said. "It's horrible."

Rhonda Kelso, a plaintiff in one of the lawsuits, called the situation "unconscionable."

"You really don't want to think about it; you want to block it out of your mind," she said.

Following the paper trail

During the discovery process, lawyers said, attorneys and their clients should receive emails and other documents from government officials, including Snyder, that could shed light on a critical yet unanswered question: How did this happen?

Attorney Michael Pitt said Michigan's Department of Health and Human Services knew about elevated blood lead levels as far back as September 2014 "and sat on this information for 10 months."

"At a certain point, I think they were ashamed, embarrassed and humiliated," the lawyer told CNN's "New Day" on Wednesday. "They were not responding in a proper way, and when they were confronted, they still denied it."

Beyond whatever the official investigations find out, Pitt said citizens taking action in the courts will lead to answers.

"It is pernicious," he said. "And the lawsuits are going to get to the whys (that) these individuals did it."

The ordeal has cast a cloud over Flint, a blue-collar city of about 100,000 that's been through tough times before -- but nothing like this.

"We take things for granted," said Ken Van Wagoner, owner of Flint's Good Beans Cafe coffee shop. "We're always sure until someone tells you things aren't right."

No obvious bombshells, but here's what's in the governor's emails about Flint
Michigan Radio – January 20, 2016, By Lindsey Smith

As promised, Governor Rick Snyder released a huge batch of emails "in the spirit of transparency and accountability" late this afternoon.

Included are emails to and from Snyder, related to Flint, from 2014 and 2015. No emails from 2013, when the option to switch to the Flint River for a two-year period was first floated, were included.

While there is plenty of information to soak in, there were no obvious bombshells.

Emails show a press release from the city of Flint was forwarded to Snyder in April 2014, when the switch to the Flint River occurred.

The next correspondence about the water is in October 2014.

Michigan's Department of Environmental Quality sends the governor's office a four-page "briefing paper" on Flint's "drinking water situation." It discusses the string of boil water advisories, the city's lack of investment in water infrastructure, and a significant number of water main breaks.

The next correspondence is from January 2015. That's shortly after Flint residents got a notice in the mail that the drinking water had elevated levels of trihalomethane, a by-product of the disinfectant chlorine. But the email doesn't specifically reference the issue.

In February 2015, the DEQ provides a more in-depth analysis of the trihalomethane issue.

"It's not 'nothing,' DEQ staff write, "But it's not like an eminent (sic) threat to public health." Staff note that the real health risks are chronic, long-term exposure.

"It's clear the nature of the threat was communicated poorly. It's also clear that folks in Flint are concerned about other aspects of their water – taste, smell and color being among the top complaints," the memo says.

"The key to the conversation is that TTHM (trihalomethane) is not a top health concern. That's key because residents need to understand TTHM in context, and it is key because it appears the mayor has seized on the public panic (sparked, frankly, by their poor communication of the violation notice) to ask the state for loan forgiveness and more money for their infrastructure improvement."

Though Snyder told the National Journal this week he first learned of lead concerns sometime last summer, the next correspondence in the batch of released emails doesn't take place until September 5, 2015.

A member of his staff emails Snyder to let him know that 1,500 kitchen water filters that an anonymous donor provided went fast.

"The Concerned Pastors exhausted the donated supply in 4 hours with 200 people still waiting to get a filter," Harvey Hollins wrote.

The governor's involvement in the donations came to light a few weeks later, when The Flint Journal/MLive.com wrote, "Gov. Rick Snyder quietly helped deliver 1,500 water filters to Flint last month – even as state officials gave assurances that the city's tap water was safe and meeting all regulatory standards."

On September 25, Snyder's then-chief of staff, Dennis Muchmore, wrote to Snyder that "the issue of Flint water and its quality continues to be a challenging topic."

"The DEQ and DCH feel that some in Flint are taking the very sensitive issue of children's exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state," Muchmore wrote.

"I can't figure out why the state is responsible except that (then-state treasurer Andy) Dillon did make the ultimate decision so we're not able to avoid the subject," Muchmore wrote.

"The real responsibility rests with the county, city and KWA, but since the issue here is the health of citizens and their children we're taking a pro-active approach putting DHHS out there as an educator. I'm not sure how much background you need on all this so I don't want to flood you with stuff," he concludes.

Snyder doesn't respond directly, but emails indicate a call is scheduled because Snyder wants to "get the latest and greatest info on this topic."

The next day, a Saturday, Muchmore writes again.

"We can't tolerate increased lead levels in any event, but it's really the city's water system that needs to deal with it. We're throwing as much assistance as possible at the lead problem as regardless of what the levels, explanations or proposed solutions, the residents and particularly the poor need help to deal with it."

Muchmore says home filters seem to be the best solution.

"The residents are caught in a swirl of misinformation and long-term distrust of local government unlikely to be resolved," he wrote.

He attaches reports from the Michigan Department of Health and Human Services that downplay data released by local pediatricians, which showed a spike in elevated blood lead levels. There is no reply from Snyder.

On October 6, Snyder wrote to his staff that he wants daily reports about the situation in Flint "until our recommendations are fully implemented." Emails show reports from departments come more frequently for that next week, but not daily.

On October 18, the day former MDEQ Director Dan Wyant admits the department made mistakes when implementing the federal Lead and Copper Rule in Flint, he writes Snyder to inform him that he's about to share this information with the press. There is no response from Snyder.

In December, the governor's staff sends him information about the latest blood tests on Flint's children. They also send him a summary and a link to a blog post written by Virginia Tech's Marc Edwards, shortly after he gets a batch of emails from Michigan's Department of Health and Human Services under a Freedom of Information Act request. There is no response from Snyder.

Later that month, former director of the DEQ, Dan Wyant, sends Snyder a report from the auditor general, which he says is consistent with the department's internal findings. There is no response from Snyder.

Lastly, Snyder's now chief of state Jarrod Agen wrote to Snyder on December 28, 2015 in response to the Flint Water Task Force's letter that places major blame for the Flint water crisis with the state Department of Environmental Quality.

"If this is the path that the Task Force is on, it is best to make changes at DEQ sooner rather than later," Agen wrote. "That likely means accepting Dan's resignation. It also means moving up the termination of the 3 DEQ personal (sic) previously planned for Jan 4 to tomorrow."

Wyant resigned the next day. Department spokesman Brad Wurfel sent an email the same day, saying he was resigning as well.

It's not clear if anyone else was fired at the DEQ. Requests to the DEQ and the governor's spokesman for clarification were not immediately returned.

Governor's emails show debate over blame for Flint water

9 & 10 News – January 21, 2016, By David Eggert, Associated Press

LANSING, Mich. (AP) - A day after doctors reported high levels of lead in Flint children, Gov. Rick Snyder's top aide told him the "real responsibility" for the city's water issues rested with local government officials, emails released Wednesday showed.

Then-chief of staff Dennis Muchmore later told the governor that residents were "caught in a swirl of misinformation" about lead contamination and that it was up to city and county leaders to confront the issue, according to the emails.

"Of course, some of the Flint people respond by looking for someone to blame instead of working to reduce anxiety," Muchmore wrote. "We can't tolerate increased lead levels in any event, but it's really the city's water system that needs to deal with it."

In a Sept. 25 email, Muchmore said he could not "figure out why the state is responsible" before noting that former state Treasurer Andy Dillon had signed off on the city's plans to build a water pipeline from Lake Huron, which required a temporary switch to the Flint River during construction.

So, he explained, "we're not able to avoid the subject."

Muchmore also said two state agencies and the U.S. Environmental Protection Agency could not "find evidence of a major change" in lead levels.

By early October, the Snyder administration was forced to acknowledge the validity of the lead concerns and help Flint return to the Detroit water system.

The two-term Republican released more than 270 pages of emails a day after his annual State of the State speech in which he apologized again for the emergency and pledged to act. He called the release of the messages - which are exempt from Michigan's public-records law - "unprecedented" but necessary so people "know the truth."

He did not release the emails of his staff, drawing criticism from Democrats and open-government advocates. The rest of the administration is subject to the Freedom of Information Act.

According to Muchmore's emails to Snyder, officials at the Department of Environmental Quality and the Department of Health and Human Services felt some people in Flint were trying to turn the lead issue into "a political football," claiming the agencies were underestimating the danger and trying to shift responsibility to the state.

Flint's water became contaminated with lead when the city began drawing from the river in 2014 as a cost-cutting measure while under state financial management. The water was not properly treated to keep lead from pipes from leaching into the supply.

Snyder has said he was first briefed on the "potential scope and magnitude" of the crisis on Sept. 28. State epidemiologists validated local physicians' findings on Oct. 1, and the governor said he immediately ordered the distribution of filters along with water and blood testing.

In December, Snyder learned that the task force he appointed to investigate the crisis had concluded that the Department of Environmental Quality was primarily to blame.

The task force chairman, Ken Sikkema, said in a separate message that the finding was "critical and urgent" and could not be delayed until the group completed its report.

Snyder aide Jarrod Agen told the governor on Dec. 28 that the task force's "harsh" verdict suggested that personnel changes at the environmental department scheduled for after the holidays should not wait. Agency Director Dan Wyant's resignation - and the firing of three other staffers - should take effect the next day.

Also Wednesday, Snyder asked President Barack Obama to reconsider the denial of a federal disaster declaration to address the crisis, saying it poses an "imminent and long-term threat" to residents.

Obama declared an emergency - qualifying the city for \$5 million - but concluded that the high lead levels are not a disaster based on the legal requirement that disaster money is intended for natural events such as fires or floods. Snyder had estimated a need for up to \$95 million over a year.

In his appeal letter, Snyder called the decision a "narrow reading" and likened the crisis to a flood, "given that qualities within the water, over a long term, damaged the city's infrastructure in ways that were not immediately or easily detectable."

The community about 75 miles north of Detroit, has about 100,000 residents, with about 40 percent of them living below the poverty line. The population is nearly 60 percent black.

The lead- which can lead to behavior problems and learning disabilities in children and kidney ailments in adults - has left Flint residents unable to drink unfiltered tap water.

Flint Mayor Karen Weaver refused to call for Snyder's resignation while at the U.S. Conference of Mayors meeting in Washington, D.C., saying investigations should go forward.

"I'm staying focused on what I need to get from him right now," Weaver said Wednesday.

The Michigan House on Wednesday approved Snyder's request for \$28 million more in the short term to pay for more filters, bottled water, school nurses and testing and monitoring - on top of \$10.6 million allocated in the fall. The money would also replace plumbing fixtures in schools with lead problems and help Flint with unpaid water bills. The measure moves to the Senate for expected action next week.

Snyder plans to make a bigger request in his February budget proposal. He also announced the deployment of roughly 130 more National Guard members to the city.

Obama in the D: We'll help Flint

Detroit Free Press – January 20, 2016, By Kathleen ray and Greg Gardner

President Barack Obama, in Detroit on Wednesday for his first visit to the North American International Auto Show, weighed in on the Flint water crisis at the top of his speech to autoworkers and their families at a UAW education and training center, saying of Mayor Karen Weaver and the residents of Flint, "we're going to have her back and all the people of Flint's back."

Obama didn't travel to Flint to examine the city's water crisis firsthand, but he met with Weaver privately in Washington on Tuesday evening to discuss the high concentrations of lead found in Flint's drinking water, offering continued logistical and technical support for efforts to address the crisis, and dispatching an official from the Department of Health and Human Services to coordinate the federal response.

In a summary of that meeting, the White House said Obama "heard firsthand how the residents of Flint are dealing with the ongoing public health crisis and the challenges that still exist for the city."

On Wednesday, before he addressed the crowd at the UAW-GM Human Resources Center on auto matters, he said: "The only job that's more important to me than president is the job of father. I would be beside myself if my kids' health would be at risk. Yesterday I met with Mayor (Karen) Weaver, and I told her we're going to have her back and all the people of Flint's back as they work their way through this terrible tragedy. It is a reminder why you can't shortchange basic services you provide your people."

Related: [Rally highlights Flint water, DPS woes for Obama visit](#)

Flint was under the control of a state-appointed emergency manager when, in a cost-cutting move, the city temporarily switched its source of drinking water from Lake Huron water treated by the Detroit Water and Sewerage Department to Flint River water treated at the Flint water treatment plant. State Department of Environmental Quality officials have admitted they made a disastrous mistake when they failed to require the addition of needed corrosion control chemicals. As a result, the corrosive Flint River water caused lead from services lines and fixtures to leach into the drinking water.

The president sat down with CBS News correspondent Lee Cowan for a CBS "Sunday Morning" interview Wednesday while he was in Michigan, and told Cowan the handling of the Flint water crisis is "inexcusable."

"What is inexplicable and inexcusable is once people figured out there was a problem and that there was lead in the water. The notion that immediately families were not notified, things were not shut down — that shouldn't happen anywhere," Obama said. "It's also an indication that sometimes we downplay the role that an effective government has to play in protecting public health and safety of people and clearly the system broke down."

On Jan. 5, Gov. Rick Snyder declared a state of emergency and Jan. 12 he mobilized the National Guard to assist with distribution of bottled water and water filters to Flint residents. Obama declared a federal state of emergency in Flint on Saturday.

Earlier Wednesday, when asked whether Snyder should resign, White House deputy press secretary Eric Schultz told reporters on Air Force One: "Our view is right now everybody should be focused on the actual problem."

Michigan Gov. releases more than 270 pages of Flint emails

WKBN News – January 20, 2016

LANSING, Mich. (WOOD) — Gov. Rick Snyder on Wednesday released his 2014 and 2015 emails in an attempt to demonstrate what he knew about the lead water crisis in Flint and when.

>>PDF: [All the emails](#)

The first to reference Flint's water in the 273-page batch of emails both to and from the governor is an April 25, 2015 press release from the city announcing it had switched to the Flint River for its water. That release promised that despite concerns, the water was safe to drink.

After Flint started to get complaints about the water and realized there were problems, it asked the state for \$30 million for infrastructure and capital improvements. According to the notes for a Sept. 15, 2015 conference call with the city, members of the administration were initially worried about giving Flint that money. The Treasury department claimed

“state funding of the city’s \$30 million request will likely invite requests from many other communities with similar needs.”

It appears the first email to reference lead in the water specifically is from Sept. 25. In it, Dennis Muchmore, the governor’s chief of staff, says that the Michigan Department of Environmental Quality and health department “feel that some in Flint are taking the very sensitive issue of children’s exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state.”

Muchmore goes on to say he “can’t figure out why the state is responsible except (then-state Treasurer Andy) Dillon did make the ultimate decision so we’re not able to avoid the subject.”

“The real responsibility rests with County, city and KWA (Karegnondi Water Authority), but since the issue here is the health of citizens and their children we’re taking a pro-active approach putting DHHS (the state health department) out there as an educator,” Muchmore wrote.

Later that day, another email said the governor wanted to speak to the leader of the DEQ about the situation.

That was the same day the City of Flint issued a Lead Advisory for the water and advised residents to flush cold-water pipes by running the water for about five minutes, using only cold water for drinking, cooking and making baby formula, and installing a water filter.

At the same time, the Michigan Department of Health and Human Services still seemed critical of lead water concerns brought up by a doctor at Hurley Medical Center in Flint, saying the department was reviewing the data but that it had checked five years of data opposed to two partial years and a larger sample size that Hurley’s and that the department “saw no increase outside the normal seasonal increases.”

The next day, Sept. 26, another email from Muchmore lays out how returning to the Detroit water system would be impossible — Flint had already sold its connector line and the water rate would be more expensive and outside of Flint citizens’ ability to pay.

“The water certainly has occasional less than savory aspects like color because of the apparently more corrosive aspects of the hard water coming from the river, but that has died down with the addition of main filters. Taste and smell have been problems also and substantial money has been extended to work on those issues,” Muchmore’s Sept. 26 email continues.

“Now we have the anti everything group turning to the lead content which is a concern for everyone, but DEQ and DHHS and EPA can’t find evidence of a major change ... Of course, some of the Flint people respond by looking for someone to blame instead of working to reduce anxiety. We can’t tolerate increased lead levels in any event, but it’s really the city’s water system that needs to deal with it. We’re throwing as much assistance as possible at the lead problem as regardless of what the levels, explanations or proposed solutions, the residents and particularly the poor need help to deal with it.”

The email goes to say that the most viable option continued to be find the money to pay for home filters. Muchmore says residents were “caught in a swirl of misinformation and long term distrust of local government unlikely to be resolved.”

It didn’t seem to be until October that the state DEQ first admitted it handled the situation inappropriately. Then-DEQ Director Dan Wyant wrote to the governor, “I believe now we made a mistake.”

“Simply said, our staff believed they were constrained by two consecutive six-month tests. We followed and defended that protocol. I believe now we made a mistake. For communities with a population above 50,000, optimized corrosion control should have been required from the beginning,” Wyant wrote.

"Because of what I have learned, I will be announcing a change in leadership in our drinking water program. I've spoken with Dennis about this, and will be making that announcement as part of the Detroit News article that will likely be out tomorrow."

It was shortly after that the governor ordered a task force to review actions taken at the local, state and federal level that led to the water problems and find solutions.

The documents following the DEQ's admission explain what went wrong with the lead tests and interaction between the federal Environmental Protection Agency and DEQ about what was being done and what should have been done.

In December, the Flint Water Advisory Task Force said it believed the blame for the crisis lay with the DEQ:

"We believe the primary responsibility for what happened in Flint rests with the Michigan Department of Environmental Quality (MDEQ)," the task force wrote in a letter to Gov. Snyder. "Although many individuals and entities at state and local levels contributed to creating and prolonging the problem, MDEQ is the government agency that has responsibility to ensure safe drinking water in Michigan. It failed in that responsibility and must be held accountable for that failure."

The problem, the task force said, was a "culture ... in which 'technical compliance' is considered sufficient to ensure safe drinking water in Michigan." It called that a "minimalist approach" that was "unacceptable" and "simply insufficient."

"It led to MDEQ's failure to recognize a number of indications that switching the water source in Flint would — and did — compromise both water safety and water quality," the letter reads in part. "The MDEQ made a number of decisions that were, and continue to be, justified on the basis that federal rules 'allowed' those decisions to be made."

It said the department's approach should instead be "founded on *what needs to be done to assure drinking water safety.*"

The emails seem to show the governor's office was slow to realize the scope of the problem, but once it did, it worked to try to find a solution and help Flint residents. The office also seemed to work to share a lot of information with the public, like lead testing data and information about resources and help. There were several mentions of releasing information on Thursday rather than Friday, recognizing that information released on Friday is less likely to get the same attention.

FREEDOM OF INFORMATION ACT

The governor promised to release the emails during his annual State of the State address on Tuesday. He didn't have to give them up. Under Michigan law, the governor and his office are exempt from requests under the Freedom of Information Act, which provides an avenue for members of the public to access government-controlled documents and data. Among states, only Michigan and Massachusetts protect their governors' offices from FOIA.

But was been public pressure for Snyder to release the documents to show when he was informed about what was going on.

In a brief note released with the emails, Snyder said he was providing the documents "in the spirit of transparency and accountability."

"The Flint water crisis is an extraordinary circumstance and therefore I'm taking this unprecedented step of releasing my emails to ensure that the people of Michigan know the truth," the note continues. "I am committed to solving this crisis and look forward to working with all Michiganders to help the residents of Flint."

FLINT WATER CRISIS

Flint's water troubles have been ongoing for nearly two years, but the state didn't really start taking action until last autumn and the crisis has received national attention only in recent weeks.

It started when the city switched to the Flint River for its water in April 2014 in an effort to save money while it was under the control of a Snyder-appointed emergency financial manager. There were immediate complaints about the look, smell and taste of the water. Then tests found Flint children had elevated levels of lead in their blood.

It was eventually discovered that the highly corrosive water from the river had damaged the city's aging pipes, drawing lead from them. State officials initially challenged or dismissed the suggestion that there was lead problem, but eventually, the Michigan Department of Health and Human Services confirmed it.

In October 2015, the state government approved funding to switch back to the Detroit system, but it was too late. The damage to the pipes had been done and lead continues to contaminate the water being sent to residents' homes.

Lead exposure can cause behavior problems and learning disabilities in children, and kidney ailments and other issues in adults.

The city declared an emergency on Dec. 14, 2015, the county on Jan. 4, 2016, Snyder on Jan. 5, and President Barack Obama on Jan. 16, clearing the way for federal aid to the city.

WHO'S TO BLAME?

Snyder said his office was assured repeatedly by the DEQ and DHHS that there was nothing to worry about — which the emails seem to confirm — which is why it took so long to act. Top leadership at the DEQ resigned and was replaced by Snyder in the wake of the crisis.

But Snyder has also claimed responsibility as governor.

"I let you down," he said during his State of the State address on Tuesday. "You deserve better. You deserve accountability. You deserve to know the buck stops here with me."

Flint residents were skeptical of Snyder's apology: "He poisoned us. He doesn't care about us," one resident told 24 Hour News 8 on Tuesday.

Also during the State of the State, which focused largely on Flint, Snyder:

Announced a bill to provide \$28 million more in aid to the city (the House approved it on Wednesday afternoon, sending it to the Senate for consideration);

Said he was sending more Michigan National Guard members to Flint to help with water distribution efforts;

Promised that every Flint household in need would be checked as soon as possible;

Said he would appeal President Barack Obama's request of federal disaster declaration (which he did Wednesday).

Daughter of Legionnaires' victim: 'She could be alive'

Detroit Free Press – January 21, 2016, By Daniel Bethencourt

When Odie Brown arrived at a Flint hospital in December 2014, she was only supposed to stay a day or two. She'd had some breathing problems that were quickly resolved.

Yet by Christmas Day, the 65-year-old was transferred to the intensive care unit. She had contracted Legionnaires' disease, a severe type of pneumonia from bacteria that thrives in warm, untreated water, and that has become part of the news surrounding the city's water crisis.

Within three weeks after her arrival, and after a transfer by helicopter to a University of Michigan hospital in Ann Arbor, Odie Brown was pronounced dead. The causes were Legionella pneumonia — another term for Legionnaires' disease — and acute respiratory distress syndrome, according to her death certificate. Hurley Medical Center would not confirm her visit, but the hospital "is following all required guidelines related to water testing and treatment," said spokesperson Ilene Cantor.

"I'm devastated," Cholyonda Brown said. "My whole entire family was devastated. My mother was my everything. It's kind of hard to believe that she's gone."

It's not clear how exactly Brown became infected with pneumonia. She had recently suffered a heart attack and was in and out of hospitals for the past few months of her life, said Brown.

But Brown is sure that no one ever brought up the city's water supply, which had been switched to the Flint River months earlier. And more recently, amid public outcry over the city's water crisis and lead poisoning, officials revealed that the Flint area also saw a spike in Legionnaires' disease — 87 cases from June 2014 to November 2015, up from a handful of cases each year. Among the 87 cases, 10 were fatal. The state has refused to release the names of the 10 victims.

[DETROIT FREE PRESS](#)

[9 must-read pages from Rick Snyder's e-mail drop](#)

Odie Brown was one of those 10, according to her daughter. A state health spokesperson confirmed that a 65-year-old woman was among those who died, but declined to name that victim.

"While cases of Legionnaires' disease are not expected in the winter, we remain diligent in our efforts and continue working with the Genesee County Health Department and our federal partners to protect the health of Flint residents," said Jennifer Eisner, a spokeswoman for the Michigan Department of Health and Human Services.

And Brown said about her mother's cause of death: "It always stuck with me in the back of my head. She could be alive today if it wasn't for (the water)."

[DETROIT FREE PRESS](#)

[Snyder e-mails: Aides figured Flint was others' problem](#)

The water crisis began in 2014, after an emergency manager tried to save money by switching the city's water supply to the corrosive and polluted Flint River water. Then lead began to leak into the water from the city's pipes. The Department of Environmental Equality has acknowledged their failure to stop the lead, but state officials largely ignored complaints from residents about the water's taste, odor and appearance.

After the city continued to use polluted water, it is estimated that all of the city's children under 6 — about 8,600 kids — should be treated as exposed to lead, which is most dangerous to small children.

[DETROIT FREE PRESS](#)

[Legionnaires' cases around Flint raised flags in 2014](#)

The crisis has sparked protests calling for Gov. Rick Snyder's resignation and even calls for his arrest and prosecution. Snyder has released some e-mails that he sent and received relating to the water crisis.

"I'm sorry and I will fix it," he said addressing Flint residents near the opening of his 50-minute State of the State address on Tuesday. "You did not create this crisis, and you do not deserve this."

It's not clear whether Odie Brown drank Flint River water in the hospital, but a drinking water expert has hypothesized that the *Legionella* bacteria was present in the Flint River water when it was piped into the city's system. *Legionella* grows best in warm water and usually enters the body from a person breathing it in, but it can't spread between people. The most vulnerable are those with weakened immune systems.

Cholyonda Brown says she and her mother had been drinking bottled water for as long as she can remember.

One month after Odie Brown's death, her daughter got a letter from the Genesee County Health Department that asked for more details about the two weeks before her death. But Brown never got a call back, even after leaving voice mails.

And when asked about her thoughts on the water crisis, Brown added: "I'm really upset and very angry. This is something that could have been prevented, and it's really unacceptable."

Reporting methods mask the high lead levels of children in Kalamazoo's core city neighborhoods

Second Wave Media – January 21, 2016, By Kathi Valenii

The Flint water crisis has gone from bad to worse since the very first reports from residents of brown, smelly water after the city switched over to river water in an attempt to save money.

When the toxicity tests on their water revealed that an entire city's population of children had been exposed to high levels of lead leaching from pipes corroded by the river water the crisis got much worse.

And when Michigan learned that officials disregarded concerns and ignored warnings about lead contamination for months before alerting residents and taking action, we found ourselves baffled by such a blatant disregard for the well-being of citizens and a willingness to let people drink poison to avoid admitting a mistake.

Now a state of emergency has been declared in Flint for the man-made disaster, Gov. Rick Snyder has asked the federal government for assistance, and the national media has shed a bright light on mismanagement at all levels.

The crisis opened up a national debate over a number of things – mainly lead exposure – but also a community's ability or inability to trust the leadership of their municipality and state to keep their residents safe. For Flint, the action regarding city's water system was taken by an Emergency Manager appointed by the governor, making decisions for that community without regard to local elected officials or citizens.

Those efforts proved not only to be a financial disaster but more disturbingly passed on lifelong learning impairments to children who were needlessly exposed to additional lead toxicity through the water pipes in their city. Between 2013 and 2015, elevated blood lead level (BLL) rates were found in 4 percent of children in Flint, a doubling of previous levels.

That is "additional" exposure, because Flint, like Kalamazoo, was already listed as one of Michigan's 14 target communities for lead exposure before the recent disaster. A target community has known issues with children exposed to lead, not from corroding water pipes as in Flint, but in their environments – mostly from ongoing exposure in older homes such as lead paint dust released from the friction of opening and closing old windows and doors, and exposure to lead in the soil around a home. About half of those 14 target communities have county-wide intervention programs to support their children. Flint is among them. Kalamazoo is not.

Effects of lead exposure cannot be corrected

Kalamazoo City Commissioner Matt Milcarek has been thinking a lot about lead exposure in light of Flint's crisis. Really, he has been thinking about a troubling lead problem – concentrated in pockets of Kalamazoo – for quite some time.

Milcarek is not only a newly elected city commissioner, he is a licensed lead inspector and risk assessor. Through his decade of work in residential construction, including his present position as the Construction Manager for Kalamazoo Neighborhood Housing Services, he oversees a variety of lead abatement rehabilitation projects in homes in Kalamazoo.

On a personal level, he has a child with elevated blood lead levels. He and his family live in the heart of the Vine neighborhood, one of the city's historic districts, with predominantly older homes. Even though they knew the precautions to take, their daughter became exposed to lead through lead dust found in their home.

Recently, Milcarek's home underwent lead hazard reduction work through the [State's Lead Safe Home Program](#), which involves lead assessment, recommendations, and remediation, to reduce toxic lead exposure within the home to families with at-risk children.

Families with children under age 6 may qualify, and those with children with elevated blood lead levels have priority. The application process can take a while, though. And for a family whose child has been diagnosed with lead poisoning, time is of the essence.

Families need intervention immediately to identify the sources of lead exposure and to eliminate it because the longer a child is exposed to lead, the greater the potential physical damage. Ongoing exposure to even low levels of lead can be as detrimental to a child's long-term cognitive and neurological abilities as a one-time high-level exposure.

According to the [CDC](#), "No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement. And effects of lead exposure cannot be corrected."

2014: Kalamazoo Cuts Lead Intervention Program

Kalamazoo used to have one of the most robust county-wide intervention programs in the state. When a child tested positive for lead poisoning, a registered nurse and lead assessor would go to the family's home, locate sources of lead, educate the family about how to reduce exposure and offer remediation options. In 2014, the program was cut, entirely.

Gillian Stoltman, Director at Kalamazoo County Health Department cites several reasons for cutting the program — funding changes that put more financial burden on local jurisdictions; the Michigan Department of Health and Human Services (MDHHS) expanded its follow-up programs; more private businesses offer lead abatement work; and the fact that the children with elevated blood lead levels had "dropped substantially."

A consistent decline in elevated blood lead levels in the county — a trend that was a reality for Kalamazoo, and nearly all of the other 14 lead target communities, during the several years preceding 2013 — can be detected in the last accessible year of the state's annual report on blood lead levels of children in Michigan.

The increased testing and awareness appeared to be working. It would be important to analyze the statistical data from 2014 — the year the county program stopped — to see if the downward trend continued. At publication, Second Wave is awaiting a response to an FOIA request for the document with that data.

The Kalamazoo County Health Department instead provided seven months worth of data from 2015, April through December, which included information about confirmed venous draws and not capillary blood tests. Venous tests are

blood draws taken directly from the vein — they are typically only conducted when capillary test results come back elevated. Capillary blood tests are more common and are a finger poke to express a small amount of blood for testing. Venous tests are more accurate and have a lower level of false positive outcomes, but they reflect a much smaller percentage of the children tested (not all those who have elevated capillary tests are re-tested with venous draws). More importantly, though, confirmed venous tests, alone, are not the data that communities use to evaluate their lead risk. Combined capillary and venous tests are the standard used to assess a community's lead risk.

Cutting an intervention program is an interesting choice when your community remains one of a handful of lead target communities in the state. The County Health Department insists that Kalamazoo has low levels — the overall county rate of children in Kalamazoo County who have elevated blood lead levels in 2013, the latest full-year data available, was 3.6 percent, slightly less than the current crisis level of 4 percent in Flint. And for the seven-month snapshot between April and December of 2015 that the Health Department offered, the overall county rate was 3 percent. However, further scrutiny of the statewide data reveals a troubling pattern.

11 percent of children in zip code 49007

Certain neighborhoods within Kalamazoo have concentrated pockets of lead poisoned children. The state report, on [Blood Lead Levels of Children in Michigan](#), breaks the numbers down by zip code, according to the most current available reports — from 2013 and earlier.

In 2013, in zip code 49001, home of the Edison neighborhood, 44.5 percent of the housing stock is made up of homes built prior to 1950, those that have the greatest lead risk. The testing rate for children in that zip code was 24.9 percent, and of the children tested 6.5 percent tested positive for elevated blood lead levels.

Jump to zip code 49007, which contains the city neighborhoods of the North Side and Vine. The housing stock there is made up of more than 60 percent older homes. In 2013, 34 percent of children in that demographic were tested for lead, and of those children, 10.9 percent tested as having elevated blood lead levels.

So, of the children being tested in some of Kalamazoo's most under-resourced neighborhoods, up to almost 11 percent of them were testing positive for lead poisoning.

It's irrelevant that the overall county rate was 3.6 percent when pockets of Kalamazoo's lowest-income neighborhoods show elevated blood lead levels at upward of three times the county rates.

“People see lead as an overblown regulatory issue,” says Milcarek

Prior to 2012, blood lead levels were only considered elevated if they were above 10 micrograms per deciliter, but now the CDC considers anything above 5 micrograms per deciliter elevated.

That's because lots and lots of studies [between 1991 and 2012](#) confirmed not only the broad risk that lead exposure poses but the small quantities that can lead to a lifetime of problems. Dozens of studies involving tens of thousands of children have documented adverse health effects in children with lead levels between 5 micrograms per deciliter and 9 micrograms per deciliter. Known adverse effects of lead poisoning include loss of IQ and lifelong behavior and learning impairment.

Lead testing is reported to the state, the Michigan Department of Health and Human Services recommends that an environmental history be done, and when very high levels are detected, a referral to case management is made, but the reality is MDHHS services the entire state on a limited and set budget. Which is why county-wide intervention programs are so important.

How much better could we be serving our most at-risk children?

What it would take to get the lead intervention program reinstated? Kalamazoo County's Stoltman reiterated that it boils down to funding.

Kent, Ingham, Genesee, Saginaw and Wayne County health departments are all target communities, like Kalamazoo. They retain community-based prevention programs. Families in those communities identify young children at risk for blood lead poisoning, and monitor blood lead levels of children above 10 micrograms per deciliter and assure follow-up of children with blood lead levels above 20 micrograms per deciliter.

And because budgets are tight in nearly every municipality, some communities have been creative as they sought out funding sources. The City of Detroit Health Department, for instance, was awarded a grant through the CDC's Childhood Lead Poisoning Prevention Program and funding from the Maternal and Child Health Block Grant for the identification and follow-up of lead-poisoned children.

If you look at the zip code break out for Kalamazoo, it's clear. Lead poisoning doesn't discriminate. But it does disproportionately affect the most marginalized children in a community.

Milcarek says lead poisoning is tied to socio-economics for a number of reasons. "It's housing, but not just old houses," he says. "We don't have good housing opportunities. We don't have a good housing stock in core cities. You have decades of disinvestment in core communities. You couple that with a state that literally has a financial system that strangles core cities and, you know, it's just this sort of decades-long compounding of consolidating low-income people in inner cities, with limited resources, in old homes and there's no equity in those homes to get them repaired. A new home doesn't have lead — it never had any put in."

Masking the problem

Which brings us back to the way we discuss a community's lead problem. Going back to the state's annual report from 2013 it shows that there were 2,300 kids under age 6 living in Portage zip code 49024. That zip code only has an older housing stock of 4.5 percent, yet they tested 333 kids or 14.5 percent of the total number of children in that zip code. Of those, only 1.5 percent had elevated blood lead levels.

Stephanie Evergreen is an award-winning researcher with a doctorate in research and evaluation. She took a look at the county reports and found two things of concern in the reporting methods.

First is the fact that "grouping (zip codes) all together masks the high lead levels happening within specific communities."

The second concern she found was in the disparity between the numbers of children tested in the highest risk areas and those tested in the lowest risk areas. Children on Medicaid are required to be tested for lead, but the 2013 data report reveals that state-wide only 26 percent of the community's children on Medicaid were tested. Kalamazoo county did better than the statewide average, but still only tested 55 percent of the highest risk children in the community.

Evergreen says, "if we are under testing, it's likely we are under accounting." She also notes that if the remainder of 45 percent of non-Medicaid children is made up of more educated parents who request testing for their child "(that) definitely would lead to a biased sample."

Discussing a community's lead problem by focusing solely on county numbers reflects a willful look-away from the most vulnerable children in our community.

There has been harsh and deserved criticism for the state-appointed leadership in Flint. Basically, the criticism can be summed up like this: "City poisons the poor to save a few bucks." Can't the same be said for Kalamazoo?

5 striking emails on the Flint water crisis

CNN – January 20, 2016, By Dana Ford

(CNN)Michigan Gov. Rick Snyder released more than 250 pages of his emails Wednesday regarding the Flint water crisis.

They date from 2014 and 2015 and, taken as a whole, help paint the picture of how officials responded to concerns about toxic lead contamination in Flint's tap water.

Timeline: How years of problems led to lead poisoning

Individually, some are striking.

Here are five of the most notable emails from the governor's release:

February 1, 2015

An email on this date included a Department of Environmental Quality "backgrounder," which discussed complaints about the taste, smell and color of Flint's water.

It stressed that the Safe Drinking Water Act works to ensure that water is safe to drink but does not regulate aesthetic values of water.

The backgrounder went on to list three factors affecting the aesthetics of water in Flint.

"It's the Flint River," it said first. "With hard water, you get a different flavor and feel. It's why General Motors suspended use of Flint Water -- it was rusting their parts."

Second, "the system is old. Flint has more than 500 miles of water pipes. More than half of those pipe miles are more than 75 years old. Much of it is cast iron. Hard water can react with cast iron and exacerbates the rusty factor, which creates that brown water that angry residents were holding up in jugs for the media cameras last week."

And third, "Flint is old. Many of the homes served by the system are old. Brown water complaints may also be attributable to cast iron pipes in customers' service connection to the city lines," the backgrounder read.

September 5, 2015

Harvey Hollins, director of urban initiatives, tells the governor that 1,500 kitchen water filters were delivered and distributed to Flint residents.

He wrote that the donated supply was exhausted in four hours with "200 people still waiting to get a filter."

The governor asks: "Factually accurate update; but how did it go over with the residents?"

To which Hollins responds: "Governor, it went over extremely well with the residents. There is a demand for more."

September 25, 2015

"The issue of Flint water and its quality continues to be a challenging topic," wrote Dennis Muchmore, Snyder's then-chief of staff.

In this email, the staffer expressed concern the water crisis was being politicized and argued the issue was not primarily the state's problem.

"The DEQ (Department of Environmental Quality) and DCH (Department of Community Health) feel that some in Flint are taking the very sensitive issue of children's exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state," said Muchmore.

September 26, 2015

Muchmore returns to the issue of responsibility one day later, telling the governor "it's really the city's water system that needs to deal with it."

"The water certainly has occasional less than savory aspects like color because of the apparently more corrosive aspects of the hard water coming from the river, but that has died down with the additional main filters. Taste and smell have been problems also and substantial money has been extended to work on those issues," he writes.

"Of course, some of the Flint people respond by looking for someone to blame instead of working to reduce anxiety. We can't tolerate increased lead levels in any event, but it's really the city's water system that needs to deal with it."

Muchmore adds: "We're throwing as much assistance as possible at the lead problem as regardless of what the levels, explanations or proposed solutions, the residents and particularly the poor need help to deal with it."

October 6, 2015

The regularity and intensity of emails has picked up by this point as it's become increasingly clear that Flint is a major problem.

The governor himself writes "we need a better update system."

"I saw in the press this am that DHHS (Department of Health and Human Services) announced yesterday that water filters would start being given out today. This should have come internally with more detail. I had press questions last night.

"Overall, we should have a daily report on Flint until our recommendations are fully implemented," Snyder wrote.

Gun deaths climb, mental health gains foothold

Michigan Chronicle – January 21, 2016, By Tom Watkins

The debate over gun control and the Second Amendment rages on. Clearly we have a problem of violence and death associated with guns.

Compared to other affluent and modern countries like Canada, Japan, and the UK, the rate of firearm homicides in the United States is three times higher. The rate of children killed by guns is 19.5 times higher.

Since 1997, there have been 51 mass shootings in the United States, compared to numbers in the single digits in other highly developed countries. Regardless of what side of the argument you are on, the facts are clear: in America more than 30,000 people die by firearms every year. We owe it to our fellow citizens impacted by this senseless violence, our families, and our future, to not become numb to this issue.

We have all tuned into the aftermath on the news: innocent movie-goers, college students, helpless children – no one is safe from someone with a gun and enough determination to do harm. The majority of Americans, including gun owners, admit something must be done legislatively to address this madness.

Executive Action/ POTUS

President Obama recently took executive action to reduce the gun violence plaguing our nation and rotting our moral fabric. Some have scoffed at his efforts while others are applauding his actions. The president's proposed plan will expand background checks through 24/7 processing, increased staff, and closer monitoring of online sales. Background checks would make available information such as whether buyers had a violent history.

Quality Mental Health Care

His proposal also included a \$500 million investment, geared toward increasing access to mental healthcare. Although people with mental illness are more likely to be a victim than the perpetrator of a crime, increased funding for mental

health can help. Besides homicides, there is a major problem of people taking their own lives committing suicide using guns. Additional mental health funding may help cut the number of people completing suicide yearly via firearm – a number eleven times higher than firearm deaths related to self-defense. Additional mental health funding would be a major victory not only for victims and families of crimes, but all individuals who struggle with accessing proper mental healthcare.

Senator Stabenow Steps Up

2016 is already proving to be a major year for mental healthcare. In addition to President Obama's executive actions, U.S. Senators Debbie Stabenow, D-Lansing, and Roy Blunt, R-Missouri, announced that they will unveil new legislation early this year that will boost funding for behavioral health services across the country. Sen. Stabenow has been a champion for quality mental healthcare throughout her career. She pioneered the Excellence in Mental Health Act, which was signed into law in 2014. With the leadership of the State Department of Health and Human Services, Michigan is pursuing this demonstration funding, to enhance services, such as: 24-hour crisis psychiatric care, integrated services, and counseling.

Mental Health First Aid Training

Recently, emergency first responders across Wayne County took part in a week long mental health first aid training course provided by Detroit Wayne Mental Health Authority and the Flinn Foundation. The program is geared at training first responders to identify a mental health crisis and de-escalate the situation. We have trained over 10,000 individuals over the past two years.

Detroit Fire Commissioner Eric Jones, who had several emergency personnel participate in the training said, "Encounters with a person in some sort of crisis happen often in our line of work, it helps to have the tools to handle them as best we can." Further grants are now allowing the program to include even more participants throughout Detroit/Wayne County to help create awareness in our schools, neighborhoods and places of worship.

If you or someone you know is struggling with a mental illness, or is need of assistance. Please reach out to our 24Hr Crisis Helpline at 800- 241-4949. Or to find out more information about Mental Health First Aid visit www.dwmha.com

Tom Watkins is president and CEO of the Detroit Wayne Mental Health Authority

Governor of Michigan Feeling Heat Over Flint Water Crisis

Townhall – January 21, 2016, By Justin Holcomb

Under an intense amount of pressure from his state, Governor Rick Snyder released 273 pages of e-mails and documents Wednesday night. This stems from the local tap water malfunction in Flint, Michigan where the water contains unusually high levels of lead. The issue has been ongoing for several years after the city decided to retrieve its water from the local river. It has finally reached a point where the federal government has had to step in and provide aide.

The governor's office claims that the local city officials are to blame because they are dodging handling the issue themselves.

"The DEQ (Department of Environmental Quality) and DCH (Department of Community Health) feel that some in Flint are taking the very sensitive issue of children's exposure to lead and trying to turn it into a political football claiming the departments are underestimating the impacts on the populations and particularly trying to shift responsibility to the state," wrote Dennis Muchmore, Snyder's former chief of staff.

"The real responsibility rests with the county, city and KWA (Karegnondi Water Authority), but since the issue here is the health of citizens and their children we're taking a proactive approach putting DHHS (Department of Health and Human Services) out there as an educator," he said.

The community about 75 miles north of Detroit, has about 100,000 residents, with about 40 percent of them living below the poverty line. The population is nearly 60 percent black.

Gov. Snyder not yet called to testify before Congress, office says

MLive – January 21, 2016, By Brad Devereaux

FLINT, MI — Congress has not contacted Gov. Rick Snyder to testify about the Flint water crisis, a spokesman for the governor's office said Thursday, Jan. 21.

Commenting on a *freep.com* report initially indicating Snyder was expected to be called to testify before congress, press secretary Dave Murray said on Jan. 21 the governor's office "received no communication from the Oversight and Government Reform Committee regarding a possible hearing and look forward to hearing from its leaders."

The Freep report, updated from its original version, now states Snyder "may be asked" to testify.

U.S. Rep. Brenda Lawrence, D-Detroit, on Thursday, Jan. 14, announced a formal request for a hearing on the public health crisis of high concentrations of lead in the drinking water in Flint.

She made the request to the House Committee on Oversight and Government Reform Subcommittee on Interior, of which she is a member.

Lawrence's office did not immediately respond to a request for comment Jan. 21.

"We trust our government to protect the health and safety of our communities, and this includes the promise of clean water to drink and clean air to breath," Lawrence said in a Jan. 14 prepared statement.

"Unfortunately, the people of Flint have had their trust violated. This public health crisis was caused by state and local officials, who made tragically bad decisions with the drinking water of Flint.

"Congressional oversight is needed to set things right, on behalf of the people of Flint and on behalf of future generations. Anything less than that would demonstrate gross negligence in providing the services that our constituents need and deserve."

In a letter requesting the hearing, Lawrence expressed concern that evidence shows that local and state government officials knew, or should have known, about the risks to human health posed by their decision to end its 50 year contract with Detroit for drinking water and enter into a new contract to receive water from the Flint River.

Within a year of the new contract, multiple researchers, including the Michigan Department of Environmental Quality (MDEQ), found carcinogens and lead in the water, Lawrence said.

Michigan Governor Rick Snyder declared a state of emergency for Flint on Jan. 6, and Genesee County switched back to Detroit Water.

"The governor is working to resolve the Flint water crisis, which is the result of missteps of government at all levels – local, state and federal," Murray said in an email requesting comment.

"Governor continues to work to bring resources to help Flint residents now and long into the future, and appreciates the support of our partners in Congress as we move forward." Murray said.

Politicians and celebrities have made statements about the Flint water crisis.

How government poisoned the people of Flint

"It is estimated that thousands of children in Flint have been exposed to lead-tainted water, even after parents were assured it was safe," Lawrence said.

"This was all done to save a few dollars."

Lawrence said she has been working on the issue "extensively," and has met with the Environmental Protection Agency and the MDEQ about it.

She said she is working with House Committee on the Judiciary Chairman John Conyers and Rep. Dan Kildee to address the lack of environmentally sound infrastructure throughout Metropolitan Detroit and the state of Michigan.

"The situation in Flint represents a crisis of leadership on all levels, and we must ensure that we take the appropriate steps to ensure that similar situations do not occur elsewhere," Lawrence said. "This hearing should examine the actions of key decision-makers who played a role in the development of this completely avoidable crisis."

Gov. Snyder: I will fix this, and I mean it

USA Today – January 21, 2016, By Rick Snyder

Residents in one of Michigan's proud cities cannot drink their water. That's unacceptable. The crisis in Flint arose from missteps at all levels of government — local, state and federal. But as governor, I take responsibility for what these families are going through, and I'm holding people in my administration accountable for their failures.

In the State of the State Address on Tuesday, I outlined an immediate action plan to help Flint residents. I asked the legislature for an immediate \$28.5 million; lawmakers are moving quickly to approve this critical assistance. Here's what we are doing on the ground in Flint:

Michigan's National Guard, state police, disaster workers and volunteers have visited affected residences, offering safe bottled water to those who need it, along with water and replacement filters.

We are testing and replacing fixtures in schools, day care centers and other high-risk locations.

We are treating children with high lead levels, including diagnostic testing, individual nurse visits, nutritional counseling and environmental assessments.

My administration is working with lawmakers on long-term funding requests to address health concerns, medical and utility costs, infrastructure repairs and more to help Flint residents into the future.

USA TODAY

How officials failed Flint: Our view

Immediately upon being made aware of the situation, my heart sank for the people of Flint, but we took swift action, executing a 10-point plan to protect those who had been harmed. Working with local officials, we declared a state of emergency, called the National Guard, and sought and received federal emergency assistance.

I ran for governor to reinvent Michigan, and we are. We're putting more Michiganders back to work and improving the quality of life by investing in and expanding programs such as Healthy Kids Dental, which is providing critical dental care to 895,000 kids. More than 600,000 lower-income residents have health care coverage through our Healthy Michigan program. Michigan is now a national leader in early childhood education. We have tackled impossible tasks and will again.

As I said to the people of Flint this week: I will fix this, and I mean it.

Rick Snyder, a Republican, is the governor of Michigan.

<http://www.usatoday.com/story/opinion/2016/01/21/flint-water-gov-rick-snyder-editorials-debates/79136190/>

Officials cannot confirm or deny disease link to Flint water crisis

WLNS – January 21, 2016

LANSING, MI (WLNS) – In a report released Thursday, the Michigan Department of Health and Human Services says at this time they cannot link the increase in Legionnaires Disease in Genesee County to lead levels in the water supply.

The final conclusion of the report is that "MDHHS cannot conclude that the increase is related to the water switch in Flint nor can we rule out a possible association at this time."

Of 42 LD cases from May 2015 – October 2015, four were fatal cases. From June 2014 to March 2015 there were five fatalities among 45 LD cases.

Among the 87 cases between June 2014 and November 2015, 35.6 percent of people got their water from the city of Flint. The MDHHS says no community exposures were identified.

Source of deadly Flint Legionnaires' outbreak still unknown, new report says

MLive – January 21, 2016, By Gary Ridley

FLINT, MI – Health officials say they are still unable to conclude what led to a deadly outbreak of Legionnaires' Disease in the Flint area.

The Michigan Department of Health and Human Services released a new report Thursday, Jan. 21, that claimed state investigators were unable to "determine a conclusive environmental source" of the outbreak.

"Our department, along with experts in the field, remain proactive in addressing the potential for future cases," MDHHS spokeswoman Jennifer Eisner said.

Gov. Rick Snyder and state Health and Human Services Department officials said Wednesday, Jan. 13, that the Flint area experienced a spike in Legionnaires' beginning in summer 2014 that left 10 dead and 77 others sick in 18 months.

The outbreak began just weeks after the city stopped using treated water from Detroit and began using the Flint River as the source of its drinking water, a change made by a Snyder-appointed emergency manager.

State health officials investigated a possible link between the city's water supply and the outbreak, but they have not concluded if there is a relationship between the two situations

"MDHHS cannot conclude that the increase is related to the water switch in Flint nor can we rule out a possible association at this time," a Thursday statement from the state health agency said.

Investigators are still trying to determine the source of the outbreak.

The new report issued Thursday reviewed 42 Legionnaires' cases reported in the Flint area between May and Oct. 2015. Four deaths associated with the disease were included in the study.

"While cases of Legionnaires disease are not expected in the winter, we remain fully engaged with the Genesee County Health Department as well as our federal partners at the Centers for Disease Control and Prevention to protect the health of Flint residents," Eden Wells, M.D., Chief Medical Executive with the MDHHS said in a statement. "We remain diligent in our efforts to proactively and appropriately address the potential for future cases."

This is the second report the agency has released on the outbreak.

The first report, compiled in June 2015 but not released to the public until Jan. 13, showed 45 Legionnaire's cases were reported in the Flint area between June 2014 and March 2015.

Initially, state officials reported that 10 people had died from the outbreak, but that number was changed to nine in the newest study.

The MDHHS said Legionnaires' deaths are defined as fatalities that occurred within 30 days of the hospital discharge. The total number of associated fatalities were changed because some cases occurred outside of the 30 day period.

Officials with Snyder's office could not immediately be reached for comment on the study.

Check back with Mlive.com as new information becomes available.

Department of health's Legionnaires report inconclusive with link to Flint water

FOX 2 – January 21, 2016

The Michigan Department of Health and Human Services' report on the outbreak of Legionnaires' disease has proven inconclusive.

The report was issued Thursday regarding the increase of Legionnaires during 2015 in Genesee County. MDHHS cannot conclude that the increase is related to the water switch in Flint nor can we rule out a possible association at this time.

From May 2015 through October 2015, 42 LD cases were reported in Genesee County. Data previously indicated three Legionnaires associated deaths from May 2015 through October 2015, however additional case information received has brought this number to four.

“While cases of Legionnaires disease are not expected in the winter, we remain fully engaged with the Genesee County Health Department as well as our federal partners at the Centers for Disease Control and Prevention to protect the health of Flint residents,” said Eden Wells, M.D., Chief Medical Executive with the MDHHS. “We remain diligent in our efforts to proactively and appropriately address the potential for future cases.”

Legionella is a type of bacteria commonly found in the environment that grows best in warm water, such as hot tubs, cooling towers, hot water tanks, potable water systems, and decorative fountains. When people are exposed to the bacteria, it can cause Legionellosis, a respiratory disease that can infect the lungs and cause pneumonia. The bacteria can also cause a less serious infection called Pontiac fever. Legionella is not transmitted person to person.

The state today also released an updated report for cases from June 2014 to March 2015. During that time, 45 LD cases were confirmed in Genesee County, including five associated fatalities. The report issued on January 13 originally identified seven fatalities during that time period.

Consistent with published literature, legionella related deaths are defined as fatalities that occurred within 30 days of hospital discharge. While the number of cases remain unchanged for LD in Genesee County, the total associated fatalities is now nine because some cases occurred outside of the 30 day period.

During LD outbreak investigations, clinical isolates, or case specimens, are often evaluated against environmental specimens to aid in determining an infection source. One reason that the increase in cases cannot be directly related to the change in Flint water supply is due to the lack of clinical Legionella isolates from case patients. Clinical isolates are necessary to interpret the findings of an environmental investigation in an outbreak. Although a limited number of clinical isolates are available from the 2015 cases, there are not enough to determine a conclusive environmental source.

Of the 87 total confirmed cases between June 2014 and November 2015, 31 people, or 35.6 percent, received city of Flint water to their residence. A total of 26 people, or 29.8 percent, had no known exposure to a Flint hospital on the city of Flint water system in the two weeks prior to illness, nor were their homes on the Flint water system. Other possible exposures were evaluated and no known community exposures were identified. Enhanced surveillance will continue in 2016.

MDHHS has been and continues to work with the Genesee County Health Department (GCHD), Michigan Department of Environmental Quality (DEQ), Centers for Disease Control and Prevention (CDC) and the Environmental Protection Agency (EPA) on this matter. MDHHS shared an initial report with local and federal partners in June 2015, and has continued to facilitate regular communication with our federal partners and GCHD to monitor cases.

State officials decrease number of Legionnaires' deaths

Detroit Free Press – January 21, 2016, By John Wisely and Kristi Tanner

State health officials said today that nine people died from Legionnaires' disease in Genesee County in the past two years, one less than previously reported.

The Michigan Department of Health and Human Services revised the figure after receiving guidance from the Centers for Disease Control about which deaths should be attributed to the disease. The new figures were based on deaths that occurred within 30 days of a discharge from a hospital or where Legionella was listed as a cause of death.

Earlier this month, the state had estimated 10 people had died from Legionnaire's disease over that period. Overall, the state confirmed 87 cases in the county in 2014-15.

State officials reiterated that they can't pinpoint the source of the cases, though Flint's switch to Flint River water in April 2014 has raised questions about whether the bacteria that causes the illness came from the city's water system.

The state "can't conclude that the increase is related to the water switch in Flint nor can we rule out a possible association at this time," the Michigan Department of Health and Human Services said in a statement today.

In previous years, the number of cases in Genesee ranged from 6 to 13 annually, but in 2014, the number of cases increased to 42. In 2015, 45 cases were confirmed.

EPA Regional Chief Resigns in Connection With Flint Crisis

ABC News – January 21, 2016, By John Flesher, the Associated Press

A regional director of the U.S. Environmental Protection Agency resigned Thursday in connection with the drinking water crisis in Flint, Michigan, and EPA chief Gina McCarthy issued an emergency order directing state and city officials to take actions to protect public health.

EPA said in a statement that Susan Hedman, head of the agency's regional office in Chicago whose jurisdiction includes Michigan, was stepping down Feb. 1 so it could focus "solely on the restoration of Flint's drinking water."

High levels of lead have been detected in the impoverished city's water since officials switched from the Detroit municipal system and began drawing from the Flint River as a cost-saving measure in April 2014. Some children's blood has tested positive for lead, a potent neurotoxin linked to learning disabilities, lower IQ and behavioral problems.

While much of the blame has been directed at Gov. Rick Snyder and state officials, particularly the Department of Environmental Quality, some have faulted the EPA's Region 5 office for not acting more forcefully.

The order issued Thursday acknowledges the state notified EPA officials in April 2015 that Flint was not treating the river water with additives to prevent corrosion from pipes. It says Hedman and others in the regional EPA office voiced concern to state and city officials over the next few months. But it wasn't until Oct. 16 that EPA established a task force to provide technical help — the day Flint switched back to the Detroit water system.

"Mismanagement has plagued the region for far too long and Ms. Hedman's resignation is way overdue," said U.S. Rep. Jason Chaffetz of Utah, chairman of the House Committee on Oversight and Government Reform.

The EPA said McCarthy had sent a memo to all staff members establishing a policy assessing and responding to "critical public health issues."

The agency also released a letter from McCarthy to Snyder outlining terms of the emergency order, which says that city and state responses to the water crisis have failed.

The EPA "is deeply concerned by continuing delays and lack of transparency," the letter said, describing the measures as "essential to ensuring the safe operation of Flint's drinking water system and the protection of public health."

Among them: submitting plans for ensuring that Flint's water has adequate treatment, including corrosion controls; making sure city personnel are qualified to operate the water system in a way that meets federal quality standards; and creating a website where citizens can get information.

The agency also said it would begin sampling and analyzing lead levels and would make the results public.

Snyder's office released a statement saying the state would cooperate with EPA.

"As Gov. Snyder said in his State of the State Address earlier this week, government at all levels failed the people of Flint. He accepted accountability for that, and noted that federal, state, and local leaders broke the trust of the people," it said.

President Barack Obama said during a U.S. Conference of Mayors meeting Thursday that about \$80 million in federal funding would be sent to Michigan next week — part of a nationwide investment in water system upgrades. It wasn't immediately clear how much would go to Flint. Obama met earlier this week with Flint Mayor Karen Weaver.

Also Thursday, Michigan officials said they still aren't certain whether there's a link between a drinking water crisis in Flint and an increase in local cases of Legionnaires' Disease.

A report by the Michigan Department of Health and Human Services says nine people died of the bacterial illness between June 2014 and October 2015 in Genesee County, which includes Flint. That's down from the 10 fatal cases reported earlier this month. Officials say the number was changed after they found some deaths weren't considered to have been caused by Legionnaires.

Eighty-seven Legionnaires' disease cases were confirmed between June 2014 and November 2015. About one-third of the infected people's homes received Flint water, which was found to have elevated lead levels after the city began drawing from the Flint River.

EPA blasts handling of Flint crisis, says risks remain

Detroit Free Press – January 21, 2016, By Todd Spangler

WASHINGTON — The U.S. Environmental Protection Agency announced in an emergency order Thursday that it plans to take over lead sampling in Flint after sharply criticizing local and state officials in the handling of the city's water crisis, saying repeated delays and a lack of transparency continue to pose "an imminent and substantial" danger to residents.

Months after the problems with the water in Flint first came to light, the EPA said in its Thursday emergency order and in a letter from Administrator Gina McCarthy to Michigan Gov. Rick Snyder that "there continues to be inadequate transparency and accountability with regard to ... test results and actions taken ... critical for the people of Flint."

"EPA will promptly begin sampling of lead levels and other contaminants in the city to assure that all regulatory authorities and the public have accurate and reliable information," the emergency order said, adding that months after the agency required corrosion controls to be added to the water system and it switched its water source back from the Flint River to Lake Huron water, "underlying problems" and "fundamental deficiencies" remain.

It gave the state a day to agree to comply with the order. Dave Murray, a spokesman for Snyder, said the state "stands ready to work with the U.S. Environmental Protection Agency and all agencies to fix the water crisis in Flint."

The order, which calls for the state to create a public website where all reports and sampling results will be made public and for the city of Flint and the state to generate an inventory of all homes in the city with lead service lines, was the strongest statement yet by the EPA in the controversy, which has come under scrutiny for its handling of the crisis as well. On Thursday, the agency also reported its Midwest Region 5 director in Chicago, Susan Hedman, tendered her resignation, effective Feb. 1, in the wake of the crisis.

McCarthy accepted the resignation, the EPA said in an e-mail, "given Susan's strong interest in ensuring that EPA Region 5's focus remains solely on the restoration of Flint's drinking water." Hedman and some of her staff have come under criticism for not reacting more swiftly to reports — some of which came almost a year ago — to high levels of lead found in Flint residents' water. Those reports were disputed, however, by the state Department of Environmental Quality, which maintained for months that the water was safe.

DETROIT FREE PRESS

Snyder could be asked to testify before Congress on Flint

Outside testing has shown a spike in lead levels in children's blood in the city as well as raised dire concerns about the corrosive nature of the Flint River water, which has caused lead to leach from old service lines. The EPA has said Flint and the state DEQ should have required treatments for corrosion control before switching to the river water, a claim DEQ previously disputed but now accepts.

But EPA also has been criticized for appearing at times over the last year to defer to DEQ's claims, even when its own scientist found high lead levels in homes. At one point, Hedman told the former Flint mayor that a draft report of those levels, which circulated without agency permission, should have been kept under wraps until it had been vetted and revised — a process which took months.

"We've said since day one everyone at every level needs to be held accountable for whatever role they had in this crisis. It's unfortunate the Legislature and state aren't moving nearly as swiftly as the federal government now appears to be," said state Senate Minority Leader Jim Ananich, D-Flint.

The EPA, which could also be called to appear at a congressional hearing said to be set for early next month, also requested that its Inspector General evaluate Region 5's supervision program for public water systems, a move U.S. Sen. Gary Peters, D-Mich., applauded as a way to "better understand how EPA could have helped prevent Flint's water crisis and what they can do to keep this situation from ever happening again."

President Barack Obama, meanwhile, announced in remarks to the U.S. Conference of Mayors on Thursday that more funding could soon be on the way to help Flint manage its water crisis: with \$80-million on its way to the state next week, at least some of which could potentially be used to help rebuild water lines and other infrastructure in the city.

Obama, who declared a state of emergency in Flint last Saturday, noted that earlier this week he met with Flint Mayor Karen Weaver "to talk about what has been an inexcusable situation with respect to drinking water there."

"In last month's bipartisan budget agreement, we secured additional funding to help cities like yours build water infrastructure," Obama continued, "and we're going to have that funding available to you by the end of next week, and that includes more than \$80 million for the state of Michigan."

Obama was referring to funding already allocated, but not yet made available, to Michigan through a federal revolving loan fund enacted through the current fiscal year budget by Congress. States use the funds to make low-cost loans to eligible entities, including municipalities, for water infrastructure, meaning Flint could be a prime candidate.

However, it was not immediately known how much, if any, of that funding would go to Flint or its capacity to cover even low-interest loans.

Certainly there is a need for funding, however. Snyder had previously asked the Federal Emergency Management Agency for more than \$50 million for infrastructure repairs as part of a major disaster declaration request which was denied last week because the Flint crisis does not meet the federal definition of a major disaster under FEMA's controlling statutes.

But even if all of the \$80 million went to Flint, replacing lead service lines and making other infrastructure repairs there could cost far more, from between \$700 million to more than \$1 billion by some estimates.

Even so, Michigan officials seized on the announcement as evidence that Obama was committed to helping Flint, where residents have been complaining of foul smelling, discolored water since switching to using the Flint River as its water source in 2014 as what was supposed to be a temporary, cost-cutting move.

"I want to thank President Obama for quickly responding to our request for federal assistance," said U.S. Sen. Debbie Stabenow, D-Mich., adding that it's the state that bears primary responsibility for the situation in Flint and the state which "must take lead in making things right for Flint families."

"It's time for the governor to act and prioritize Flint. Our community should get a significant share of these new federal resources to begin to repairing the damage done by this terrible manmade crisis," said U.S. Rep. Dan Kildee, D-Flint Township.

EPA's emergency order and letter to Snyder, who has apologized for the state's role in the Flint water crisis, suggested that even though the response in Flint has grown considerably in recent weeks and months — with several federal agencies and the National Guard there handing out bottled water, water filters and arranging blood tests, especially for children — deep concerns remain.

Noting that it was the Michigan DEQ and the city of Flint that moved to using Flint River water without corrosion controls and "triggered a cascade of events," the EPA said not only did those parties fail to protect public health, "there continue to be delays in responding to critical EPA recommendations and in implementing the actions necessary to reduce and minimize the presence of lead and other contaminants in the water supply."

The agency said the problems will continue until the deficiencies are addressed and moved not only to set rules for the kind and level of corrosion controls which would be used, but to require specific plans for reviewing those levels, setting water quality parameters and monitoring equipment.

It also called on the city and state to set up an independent advisory panel to advise them on drinking water issues, and said that before any move to a new Lake Huron water system is permitted the city must show it has the "technical, managerial and financial capacity" to do so and ensure that all testing has been completed.

As for the order to make an inventory of lead service lines in the city, it could be difficult since reports have said even city officials aren't sure how many or where they all are. But Snyder's office said he has committed to do what he can to help Flint.

"As Governor Snyder said in his State of the State address earlier this week, government at all levels failed the people of Flint," Murray said. "He accepted accountability for that, and noted that federal, state, and local leaders broke the trust of the people. We should all focus on the needs of Flint — both immediate and long-term. Making the city whole again must be our top priority."

Flint lead crisis getting a tad overdone: David Mastio

USA Today – January 22, 2016, By David Mastio

Before hitting the panic button, remember we are winning the war on lead poisoning

Now that the leaching of poisonous lead into the tap water of Flint, Mich., has been declared a [national emergency](#), it might be time to dial back the panic just a notch (or two).

Flint's [8,000 children](#) have not had their lives destroyed. Jesse Jackson can roll up his [crime tape](#). Michael Moore [can go back](#) to promoting his latest film. Taken as a whole, in fact, Flint's kids are better off than the previous generations of Michigander kids in at least one important way. Even after Flint's disaster, the city's children have far less lead in their blood than their parents or grandparents did at the same age.

That's of little comfort, of course, to those exposed to higher levels than they should have been because of a [nearly bankrupt](#) local government, a [scientifically incompetent](#) city water utility, [indifferent Michigan](#) environmental regulators and a bumbling federal Environmental Protection Agency. And any lead has a [long-term](#) insidious health impact, even after it has left the blood. But amid the furor, it's important to take a deep breath and put the exposure levels in context.

Less lead than 10 years ago

In 2005, Michigan completed the years-long process of [collecting 500,000 lead blood tests](#) from children in the state [under 6](#). Back then, [26% of kids](#) tested — that's more than one in four — had blood lead levels (5 micrograms per deciliter or greater) that would cause concern today. In the hardest hit parts of Flint now, [only 10.6% of kids](#) have such concerning levels of lead in their blood.

How can that be? While drinking water management in Flint has obviously been a mess in recent years, it's a mess that comes amid one of the greatest public health and environmental triumphs in U.S. history.

Centers for Disease Control and Prevention data are clear. In the late 1970s, [88% of Americans](#) ages 1 to 5 had at least 10 micrograms per deciliter of lead in their blood, or twice as much as today's level of concern.

By the early 1990s, [only 4.4%](#) of children were exposed to so much lead. And year by year since then, according to more than [31 million blood tests](#) compiled by the CDC just since 2005, lead has been steadily disappearing from American kids' blood.

Is that good enough? No. As any public health official will tell you, there is no safe level of lead. Once you are exposed, lead can haunt you even as it disappears from your blood. But reality is frustrating. We spent decades spewing lead into

the air and coating our houses with it before we banned leaded gasoline and lead paint. Millions of American homes get water from lead pipes and millions more have copper pipes with lead solder.

New tighter lead laws

Getting to zero isn't going to happen anytime soon, but government officials of both parties have steadily increased efforts to combat exposure to lead, which causes an array of health problems, including significantly lower IQs in children. In 2007 and 2008, the George W. Bush administration tightened rules for lead in the air and water. In 2011, President Obama signed a law tightening rules for lead in plumbing fixtures. In 2012, the CDC tightened its rules on what level of lead in blood raises concern.

After years of progress, context-free panic over events in Flint is counterproductive. It feeds the cynical idea that government always fails. And, when a more sober analysis of the health threat in Flint eventually emerges, it will damage the credibility of the politicians, public health advocates, scientists and journalists who raised alarms shorn of nuance.

Virginia Tech University researchers first brought proof of high lead levels in Flint water to public attention last September, performing three water tests in each of the more than 250 Flint homes. Lead levels were high enough to warrant urgent government action. But in a similar problem with Washington, D.C.'s tap water a little over a decade ago, hundreds of homes were found to have stratospheric lead levels of 300 parts per billion or more. In Flint, Virginia Tech found one home with such a high lead level in the water.

So how dangerous was that water? In 2015, the Michigan Department of Health and Human Services tracked one child in Flint whose initial blood test was so alarming it required hospitalization. A later, more accurate test showed a lower, but still dangerous level of lead at more than five times the CDC's level of concern. In contrast, 2005 CDC data show more than 300 people in Michigan with the same or worse confirmed test results.

Flint research complications

Michigan State University-backed research, comparing the lead in Flint children's blood before and after poison-laced tap water flowed into their homes, did find a dangerous rise in blood lead. But in raising the alarm about a threat throughout Flint, researchers minimized results that cast doubt on the breadth of the health problem — neglecting to emphasize that, in three of the city's nine wards, lead tests showed a nearly 50% decline in the number of kids testing positive. In a fourth, there was no change. The study also found that the number of children with elevated blood lead levels rose even for county residents whose water supply did not change.

One reason for such widely divergent results in Flint, where the percentage of children with elevated blood lead levels tripled in one place while nearby the percentage of kids affected fell, may be that some of the test results stem from an inaccurate screening test far less reliable than the procedure recommended by the CDC as the gold standard.

According to officials in the CDC's lead program, "capillary" test errors overestimate the amount of lead in a child's blood. Test results that show blood lead levels of 5 to 9 micrograms per deciliter, the lowest level of lead exposure now tracked by health officials, require only a single prick test. According to the CDC, the average error is 1 microgram per deciliter, a 10% to 20% overestimate in lead levels between 5 and 9. And federal rules allow laboratories to overestimate blood lead levels by as much as 4 micrograms per deciliter and still meet accuracy standards.

How many false positives?

The Michigan State University researchers who raised the alarm on blood lead levels in Flint refused to give USA TODAY their data on exactly what levels of lead they found. Michigan's health department maintains a similar database of 3,353 blood tests on children in Flint from 2015 and provided USA TODAY a preliminary analysis. Seventy-seven percent of the "positive" test results are in the lowest 5-9 micrograms per deciliter range most vulnerable to the inaccuracy of capillary

tests, raising the possibility of a significant number of false positives. As one CDC analysis dryly notes, "the ratio of imprecision to measurement value, particularly at (blood lead levels of less than 10 micrograms per deciliter) is relatively high."

What happened in Flint starting in 2013 needlessly risked the health of thousands of people who deserve better, exposing anyone who drank tap water to poisonous lead that never should have been there. Of this, there is no question.

But it also true that the health threat in Flint is being exaggerated. While plenty of questions remain about who is most at fault and who is most at risk, one thing is for sure: Flint residents of only a decade ago would have counted themselves lucky to suffer the lead "poisoning" rates plaguing the city today.

Judy Putnam: Long-ignored teeth getting help from Mason dentists

Lansing State Journal – January 22, 2016, By Judy Putnam

Out of 4,000 Zielinski Dental patients, an estimated 300 are on the Healthy Michigan Plan. The dentists say the plan makes it possible to treat patients because it covers costs plus a little more.

MASON – What is the cost of having teeth that hurt and look so bad you try not to smile?

Ask Grace Harry.

She's spent the past two years self-conscious about her smile and worried how it affected her tips as a waitress and bartender. And she estimates she's been to urgent care 10 to 12 times in extreme pain from tooth infections. The clinics gave her antibiotics and painkillers and sent her home until the next episode.

Harry, 41, went to the dentist about three years ago, the first time in her adult life. She needed extensive work and she was referred to a clinic at the University of Michigan. She couldn't afford the time and transportation. Her teeth, she said, were broken, cracked and infected.

"I never smiled. My confidence was down because I didn't want to show my teeth," she said. "There were days I couldn't eat because the pain was so bad."

She said the births of her three children were less painful.

Then a coworker at Big Boy in Mason, where she now works as a cook and dishwasher, told her about Timothy Zielinski. He's a Mason dentist who has a practice with his nephew, Sean Zielinski. The pair volunteer at the Care Free Dental Clinic, a free clinic in Lansing, and they accept Healthy Michigan Plan insurance at their Mason private practice, Zielinski Dental.

Timothy Zielinski pulled all of Harry's teeth in November. Her gums are healing and she will get a full set of dentures, likely next month. That's a service that his office manager, Marcia Meyers, estimates would cost an uninsured person \$6,000 out of pocket—clearly unaffordable for a low-income family without insurance. It's now covered by the Healthy Michigan Plan, Michigan's expanded Medicaid program for low-income adults that began in April 2014.

Out of 4,000 patients at Zielinski Dental, an estimated 300 are on the Healthy Michigan Plan. The dentists say it makes it possible to treat those patients because it covers costs plus a little profit. They hope more of their peers will look into it.

"A lot of people live with this pain day in and day out," Timothy Zielinski said.

Fewer than half of patients on the Healthy Michigan Plan last year visited a dentist, according to the Michigan Department of Health and Human Services. The plan now has more than 600,000 enrollees in Michigan, including 25,000 in Ingham, Eaton and Clinton counties.

Timothy Zielinski said the Healthy Michigan Plan is the biggest boost to helping people that he's seen in more than 30 years of practice. He credits Gov. Rick Snyder — now under heavy criticism for ignoring people with low incomes in Flint — for having the courage to push through the expanded Medicaid program when other Republican governors balked.

Zielinski says he doesn't want to weigh in on the Flint tainted water controversy but he has to credit Snyder for helping people with untreated dental problems.

"I'm going to have to applaud him for that," he said.

As for Grace Harry, she's looking forward to smiling again.

Hospital ties Legionnaires' to Flint water

The Detroit News – January 23, 2016, By Karen Bouffard

Flint's contaminated water likely contributed to the Legionnaires' disease outbreak in Genesee County, where the bacteria was found in a hospital's water supply, an expert for McLaren Regional Medical Center said.

Water testing during the outbreak found Legionella bacteria at the Flint hospital, where an expert on the disease concluded the organism likely came from the city's tainted water.

Further, a state analysis showed that a high number of those diagnosed with Legionnaires' in Flint had been patients at McLaren Flint in the 14 days prior to showing symptoms.

Gov. Rick Snyder on Jan. 13 reported a spike in cases of the deadly disease in Genesee County, but he and state health officials said it was unclear if it was tied to Flint's water crisis. The state reported 87 cases, including nine deaths, in the months after Flint started drawing corrosive water from the Flint River instead of the Detroit Water and Sewerage Department.

"The water quality issues, from a microbiological point of view, certainly were a factor in the increase in Legionnaires' disease in Genesee County," said Janet Stout, a research associate professor at the University of Pittsburgh's Swanson School of Engineering and an expert on Legionnaires' disease. She was hired to help the hospital assess and deal with the Legionella germ found in its water.

In an email to The Detroit News, McLaren spokeswoman Laurie Prochazka confirmed the facility undertook "aggressive testing" of its water after noting an increase in Legionnaires' there and at other hospitals in the spring of 2014.

"Early test results indicated the presence of a low level of Legionella," she said

The medical center took action, and “all Legionella testing continues to show the McLaren Flint water supply is well within safety and quality standards,” Prochazka added.

Legionnaires’ disease is caused in warmer months by a bacteria in warm fresh water that leads to pneumonia and sometimes death. The bacteria can be found in large plumbing systems, hot tubs, air-conditioning units and fountains.

Heightened scrutiny of the potential role of hospitals in recent outbreaks comes as Snyder’s Flint Water Advisory Task Force on Friday predicted another surge in Legionnaires’ disease this spring, since the bacteria flourishes in warmer temperatures.

The task force recommended the city’s health care facilities extend disinfection safeguards to all air treatment and cooling systems to prevent colonization with Legionella, noting “time is of the essence.”

Stout said the germ likely entered the hospital via brown water, which was delivered by the Flint water system laden with organic matter on which Legionella and other bacteria feast.

State epidemiological reports found more cases “associated” with McLaren than with any other source of exposure, but have not made a connection with Flint River water.

Hard to identify strain

Director Nick Lyons, asked why the state health department did not act sooner to alert the public, said this week that experts had linked multiple Legionnaires’ cases to a single hospital and thought the problem might be resolved if the hospital took appropriate actions.

“It’s important for us to inform the public,” Lyon said Tuesday. “It’s also important for us to stay open-minded and ensure that we’re really checking any sort of possibility for Legionnaires’, including anything that could be associated with the water source change.”

Michigan Department of Health and Human Services spokeswoman Jennifer Smith said a “strain match” is needed “to make a definitive statement on environmental causation.”

Officials have said it’s impossible to identify the strain because Legionella samples were never kept from the patients who had Legionnaires’.

According to Stout, the University of Pittsburgh professor, studies have estimated Legionella would be found in about 50 percent of hospitals if water testing were required by the federal Centers for Disease Control and Prevention.

Eisner referred questions about how the bacteria got into McLaren’s water system to water experts at the Michigan Department of Environmental Quality.

A state epidemiological study released last week noted 16 of 45 people who came down with Legionnaires’ between June 2014 and March 2015 had been patients at McLaren before the onset of symptoms. It concluded that McLaren was more strongly “associated” with the outbreak than any other possible source — including Flint River water. About 47 percent of the cases involved patients whose primary water came from the city.

A report released Thursday on 42 cases from May through November 2015 said 22 were hospitalized at what was identified as “Hospital A” within two weeks of Legionnaires’ onset. One was an inpatient at Hospital A and another facility. Eisner would not name the hospitals, saying the facilities were identified by error in the earlier report.

Few cases found earlier

Before the water switch, Genesee County reported only about a dozen cases of the disease each year.

“In this case, the Legionella outbreak that was reported from June 2014 to March 2015 was found to have an association with a health care facility, and that facility did undertake remediation,” state health department spokeswoman Jennifer Eisner told The Detroit News, identifying McLaren Regional Medical Center as the facility.

Genesee County Environmental Health Division Director Jim Henry said the county worked with McLaren — which uses Flint city water — to resolve a “brown water” issue that occurred after the city switched from Detroit water to Flint River water in April 2014. At least one water main rupture occurred near the hospital, he added.

Prochazka said the hospital noted an increase in Legionella cases at McLaren and other local hospitals shortly after the city switched to Flint River water. Aggressive water testing indicated the presence of a “low level” of Legionella bacteria, she said.

“Once this was identified, we put immediate measures in place that were successful in controlling the situation,” she said. “We have taken additional measures to safeguard the quality of our water system even more by installing a secondary water disinfectant system throughout the entire facility at a cost of nearly \$300,000.

“We have also installed lead filters on water and ice machines and continue to aggressively test and monitor our water system. All Legionella testing continues to show that the McLaren Flint water supply is well within safety and quality standards.”

Bacteria link sought

The University of Pittsburgh’s Stout said an exact molecular match is ideal for determining where the bacteria came from. In the absence of scientific proof, studies have found links between poor quality water from community water systems and increased cases of legionnaires’ disease in New Jersey and Baltimore.

“You have to look at what’s probable,” Stout said. “(When) you have these brown water events and you have water main breaks ... the result of that is you have more nutrients in the water.

“The other benefit is that the materials neutralize the chlorine in the water so it’s not available for killing this bacteria,” Stout said.

Marc Edwards, a Virginia Tech researcher whose water testing helped uncover the lead contamination problem, suggested a link between the increase in Legionnaires’ cases and a critical misstep in the MDEQ’s handling of Flint’s water treatment — the state’s failure to require corrosion controls to prevent lead from leaching into the water.

Edwards and his research team won a National Science Foundation grant in September for a study on the effects of interruptions in corrosion control.

In a posting last week on his website, Edwards wrote: “A key hypothesis of our (grant) is that the rapid corrosion of iron in water mains in Flint would dramatically increase growth of Legionella in buildings.”

Stout said it’s fairly uncommon for people to get Legionnaires’ disease from water at their homes. Large, complex water system in big buildings are more likely to harbor the bacteria.

Jim Henry, the county environmental health director, said it’s been difficult to get information needed to track the origin of the disease. He has submitted a Michigan Freedom of Information Act request to the city of Flint for the location of water main ruptures that result in brown water and is still waiting for a response.

Breaking Down the Risk of Legionnaires' Disease

WILX – January 22, 2016, By Faith Miller

Lansing, MI (WILX-TV) - You have seen the headlines - "Nine Dead in Genessee County from Legionnaires' Disease."

Old pipes, pipes with stagnant water, and warm water are all factors that help Legionella, the bacteria that causes the disease, to grow, says Joan Rose, and Michigan State University Professor of Water Quality and Public Health.

"Legionella can commonly be found in water systems, and what we worry about is the specific type of Legionella, Legionella pneumophila, and if it's growing to high concentrations," Rose said. You can't get the disease by drinking the bacteria. If the water becomes steam, like in a shower or through an air conditioner, then the bacteria can be inhaled, and that's when it is dangerous.

"If you're sensitive, the elderly and people who have pre-conditions, you are more susceptible to getting Legionnaires disease," Rose said.

Symptoms of Legionnaires are like a mild flu, with a cough, fever and body aches, says Angela Minicuci of the Michigan Department of Health and Human Services. Most people can get over the disease on their own, but if you're not getting better with rest, Minicuci says see a doctor.

There aren't really filters you can buy to get the bacteria out of the water, but Rose says keeping your water heater at 130 degrees Fahrenheit.

"Anytime it's found, the course of action is to disinfect those pipes and clean it out," Rose said.

MDHHS says there has not been an increase in cases of Legionnaires' disease in Ingham County, just Genessee. But if you're concerned, or someone more susceptible to the disease because you have a weakened immune system, Mincuci says washing your hands diligently can help protect you.

Packaged salad listeria outbreak kills 1 in Macomb Co.

Detroit Free Press – January 22, 2016, By Ann Zaniewski

One Michigan resident has died and three others fell ill as part of a listeria outbreak in six states linked to Dole packaged salads.

Officials are working to identify the source of the contamination and urging people to throw away salads that could be affected.

Twelve people in six states — Michigan, Indiana, Massachusetts, New Jersey, New York and Pennsylvania — have been infected with the outbreak strain of *Listeria monocytogenes* since July 5, according to the Centers for Disease Control and Prevention.

The sole death was a person who lived in Macomb County. That person's name, age, gender and hometown have not been publicly released because of confidentiality rules, said Angela Minicuci, spokeswoman for the Michigan Department of Health and Human Services.

Although the outbreak began in July, officials were not able to isolate its source until January.

The outbreak was traced to a Dole processing facility in Springfield, Ohio. Dole has since shut down the facility and is withdrawing all packaged salads that were produced there, according to the CDC.

Officials are now hunting for the source.

"I liken this to a sort of food safety 'CSI.' It sometimes takes a while to identify a source of contamination, and sometimes a source is never identified," said Jennifer Holton, spokeswoman for the Michigan Department of Agriculture and Rural Development.

"(The outbreak) was associated with products produced at that plant, but it doesn't mean the contamination occurred at that plant. ... All aspects of the supply chain are going to be looked at."

Holton said the state agriculture and health departments are working with the U.S. Food and Drug Administration in the investigation.

She said officials are trying to get a distribution list so they can pinpoint where the prepackaged salads were shipped in Michigan.

"We are all committed to food safety," she said.

The affected products are sold under various brand names including Dole, Fresh Selections, Simple Truth, Marketside, The Little Salad Bar and President's Choice. They can be identified by the letter "A" at the beginning of the manufacturing code on the package.

People who bought the products should throw them away and wash the refrigerator drawer where they were stored, as well as any cutting boards used to chop the greens.

The people who got sick ranged in age from 3 to 83, the CDC said.

Listeria can cause listeriosis, a life-threatening illness. Symptoms include high fever, severe headache, neck stiffness, muscle aches, and nausea, sometimes diarrhea or other gastrointestinal symptoms, according to state health officials.

The disease primarily affects pregnant women, newborn babies, older adults and adults with weakened immune systems. The incubation period is typically between two and three weeks, but can be as long as 70 days.

Thirsting for justice, Flint family's first concern is rationing water

Al Jazeera America – January 22, 2016

For Jennifer Stevens and her family, even a simple decision over what to cook for dinner now has to factor in how it will eat into a precious commodity in Flint, Michigan: drinkable water.

“Oh, we want spaghetti for dinner? Well, we’re going to have to use about five bottles of water to boil some noodles for a spaghetti dinner,” she explained from her home in Flint, which continues to suffer from a 2013 cost-saving decision to switch its water supply from Detroit’s system to its own new one, which will draw water from Lake Huron but drew water from the Flint River while the new system is being completed.

Faced with a water contamination crisis that could imperil the health of thousands of people and has pitted residents against municipal and state officials they have accused of negligence, the Stevens family has had to learn a kind of household triage.

Life now revolves around bottled water. And everyday tasks like brushing teeth, washing hair and bathing have become needlessly difficult.

And like many others in Flint, sickness has befallen the family in the months since the switch to water from the Flint River in April 2014. About a year ago, Stevens came down with strep throat and placed blame on the tap water. So she started relying more and more on bottled water, and now bottled water is a way of life.

“You’ve got to take care of your kids because one day, you’re not going be around, and they’re still going to be affected by this,” she said.

Just about every day, she joins the steady parade of Flint residents who pick up free water distributed by the National Guard. Everyone gets one case per day, but at one point, she used food stamps to buy water. “Before I got my stamps, I was freaking out because I only had that much water to survive on,” she said.

Under the direction of a state-appointed emergency manager, Flint — a working-class, mostly black city of 100,000 people north of Detroit — switched its water source to save money. But the more corrosive water from the Flint River, which is known locally as a dumping ground, was not treated and caused more lead to leach from the city’s aging water pipes than Detroit’s water did.

Complaints about the water began within a month of the change, but officials did not take steps to remedy the situation until October 2015, after tests showed elevated levels of lead in some tap water in the city and in some children. Lead is a toxin that can damage brains and cause other health problems.

The city switched back to Detroit water in mid-October, but the contamination continued. According to Flint Mayor Karen Weaver, despite switching back to water from Lake Huron, it was too late to undo corrosion damage to the water pipes, *The New York Times* reported.

Michigan Gov. Rick Snyder and other state officials are now under fire from many quarters for their slow and insufficient response to the crisis. Snyder, a Republican, has rejected calls from critics for his resignation. He asked the Michigan state legislature this week to approve \$28 million to assist Flint and said there would be additional funding requests.

On Thursday, President Barack Obama said his administration would provide \$80 million in aid to Michigan, much of which will go to remedy the situation in Flint, *The Detroit News* reported.

Stevens blames local, state and federal officials for the crisis. "They were lazy. They wanted a cheaper way out. You get what you pay for."

Snyder is expected to appear before a congressional panel under the auspices of the House Oversight and Government Reform Committee, according to the office of Rep. Brenda Lawrence, D-Mich. but the media representative for at least one Republican on the committee said details about any hearing "are entirely premature."

The Michigan Department of Health and Human Services said that it saw an increase in Legionnaires' disease cases in Genesee County, which includes Flint, during the time the Flint River was the primary water source but that it could not conclude if the cases were related to the water switch. A report released on Thursday said there were 87 Legionnaires' cases in the county from June 2014 through October 2014, including nine deaths.

Residents like Stevens have little faith in city and state officials to undo the damage that has been done to their lives.

She asked, "When will we catch a break? When will our lives just go back to what we call normal?"

<http://america.aljazeera.com/articles/2016/1/22/flint-learns-to-survive-as-water-crisis-continues.html>

Feds asked to extend Obamacare deadline for Flint

Detroit Free Press – January 22, 2016, By Todd Spangler

WASHINGTON — Two Michigan members of Congress are asking the Obama administration to extend the open enrollment period for health coverage under the Affordable Care Act for residents of Flint because of the drinking water crisis there.

In a letter Friday to Health and Human Services Secretary Sylvia Burwell, U.S. Sen. Gary Peters and U.S. Rep. Dan Kildee, D-Flint Township, said "a special enrollment period would provide more time for Flint residents to enroll in quality health plans that are vital to their future health."

Federal agencies, including the Department of Health and Human Services have been responding to the crisis in Flint, where drinking water has been found to have high levels of lead and researchers have found both an increased number of children with high lead levels in their blood and a rising number of cases of Legionnaires' disease, which may be related.

In a statement released by Peters' and Kildee's offices they said that quality health care is "one factor that can help mitigate some of the adverse physical, cognitive and behavioral effects of lead exposure, particularly for young children who are most vulnerable."

Experts say that lead poisoning, especially in children, can have lifetime impacts, affecting IQ and potentially leading to learning disabilities, speech and language problems and an increased risk for behavioral issues. In adults, it can be a contributing factor in increased blood pressure and hypertension, kidney problems and reproductive issues in men and women, the EPA says.

Faces of water crisis: Flint residents describe health fears

DETROIT FREE PRESS

Flint resident speaks on water crisis

The deadline for enrollment under the ACA for coverage in 2016 is Jan. 31. According to the Kaiser Family Foundation, a nonprofit organization focusing on health issues, the Flint area was one of the lowest areas for eligible recipients on the state insurance marketplace signing up in Michigan in 2015, at 37%.

Peters and Kildee also asked DHHS to "commit additional resources to assist Flint families to secure health care coverage" before the Jan. 31 deadline.

"The health implications of this catastrophe are severe and its impact is irreversible, but signing Flint residents up for quality health care insurance will improve their long-term health outcomes," they said.

Peters, Kildee and U.S. Sen. Debbie Stabenow, also D-Mich., also sent a letter to Gov. Rick Snyder on Friday urging him to request a disaster declaration from the Small Business Administration which, if granted, could free up low-interest loans for businesses, homeowners and others impacted by the crisis.

Snyder already lost a bid for a presidential disaster declaration in Flint because the statute limits those to natural disasters, fires and explosions. But the Michigan members of Congress said he could still receive a physical or economic disaster declaration from the Small Business Administration.

Legionnaires' expert blames spike in cases on Flint water

Detroit Free Press – January 22, 2016, By Kristi Tanner and Elisha Anderson

A national expert in Legionnaires' disease who met with health and hospital officials in Michigan blames the spike in cases in Genesee County on Flint's water.

Janet Stout, associate professor at the University of Pittsburgh Swanson School of Engineering with 30 years of experience studying the disease, concluded the problems with Flint's water are related to the increase in Legionnaires' cases — although she can't prove it.

"It is like an emperor's new clothes situation," Stout said. "Somebody has to say it."

She said it's a "reasonable conclusion" given the link between poor water quality and Legionnaires' disease in scientific studies done elsewhere.

New data released this week by the Michigan Department of Health and Human Services on Legionnaires' outbreaks shows 70% of people who contracted the disease were exposed to Flint water two weeks before their symptoms began.

State officials have said they haven't pinpointed the source of the outbreaks. From June 2014 to November 2015, there were 87 people hospitalized, including nine who died, officials said in a report released Thursday.

Angela Minicuci, a spokeswoman for the state Department of Health and Human Services, told the Free Press Friday that it's highly unlikely they'll ever be able to determine what caused two spikes in Legionnaires' disease in Genesee County. She said officials must look at a specimen from the person who got sick and match it to a specimen from the environment.

"Because these people are no longer ill and because there's a good chance that something may have changed in the environment since the time they were potentially exposed, it's very difficult to go back and actually make those associations," Minicuci said.

Legionnaires' is a severe form of pneumonia caused by the Legionella bacteria. The bacteria also can produce a milder form of illness known as Pontiac fever, with flu like symptoms.

Legionella in water is "fairly common," Minicuci said.

Since June 2014, 61 out of 87 people were exposed to Flint water either at home or at a Flint health care facility connected to the city's water system — in some cases both — before contracting the disease, a Free Press analysis of state data shows.

A state report shows that in the first 10 months of the outbreak, 51% of confirmed cases included people who had been patients or visitors at McLaren Flint two weeks before getting sick.

The hospital released a statement Friday saying after Flint switched its source of water from Lake Huron to the Flint River in April 2014, they noticed an increase in Legionella cases and people seeking treatment.

"We began aggressively testing our water supply," a statement provided by the hospital said. "An early test result indicated the presence of a low level of Legionella. As soon as this was identified, McLaren Flint put immediate measures in place that were successful in controlling the situation."

That test result came back in August 2014, hospital spokeswoman Laurie Prochazka said.

The hospital has installed a \$300,000 secondary water disinfectant system and lead filters on water and ice machines, the statement said. Testing shows McLaren Flint's water supply is "within safety and quality standards," it said.

"No tests have ever determined that McLaren is the source of exposure for any patients testing positive for the Legionella antigen," the statement said.

Stout said she consulted with McLaren Flint on reducing Legionella and also talked to officials with the Genesee County Health Department. She said McLaren Flint is much safer than many hospitals across the U.S. who have yet to test their water for Legionella.

Stout said smaller water systems, like homes, are less likely to have Legionella than larger water systems like those found in apartment buildings, hospitals and hotels.

According to the Genesee County Health Department, people contract Legionnaires' disease by breathing in a mist or vapor containing the bacteria and can't get it from drinking water containing Legionella.

People most at risk to get Legionnaires' disease include smokers or former smokers, people with health problems and elderly people.

State's top doctor admits 'missed opportunity' for earlier Flint response

Detroit Free Press – January 23, 2016, By Keith Matheny

The state's own data showed a spike in Flint children's blood lead levels in months after the city switched to Flint River water. But state epidemiologists explained it away.

The Michigan Department of Health and Human Services' own review last July showed a spike in blood-lead levels in Flint children in the months after the city switched its water supply to Flint River water. But state epidemiologists explained it away, a "missed opportunity" that could have resulted in an earlier response to the crisis, the agency's chief medical officer said.

"If I knew then what I know now ... We needed a much more robust analysis," Dr. Eden Wells, Health and Human Services' chief medical executive, said Friday. "We should have torn it up and apart and gone up and down with that (data). That wasn't done.

"When I think about how Flint citizens have just had one thing after another — not just over the past two years, but many, many years — I wish that was not a missed opportunity."

[DETROIT FREE PRESS](#)

[State data confirms higher blood-lead levels in Flint kids](#)

The July data review by the department came amid a growing outcry among Flint residents and local officials about the condition and safety of the city's water. The data showed a spike in the levels of lead in Flint children's blood in July, August and September 2014 — only a few months after the city had switched its water supply from the city of Detroit's system to Flint River water. Email exchanges within the department showed efforts to broaden the data review, to see if the conclusions would change. They didn't. "Even compared to the previous three years, the portion of first-time EBL (elevated blood-lead levels) is highest during summer 2014," health department officials stated in a July 28 memo for Health and Human Services Director Nick Lyon.

But the state data also showed a drop in blood-lead levels in Flint children for October 2014 — a typical, seasonal reduction. That led state epidemiologists to decide the summer spike they saw was insignificant. "So, they said we'll just have to keep collecting further data, and taking a look at this, and follow it," Wells said.

It was the work of one Flint pediatrician, Dr. Mona Hanna-Attisha, who saw alarming increases in the incidences of children with elevated blood-lead levels at her Hurley Medical Center that ultimately led the state health department's team of epidemiologists — a group Wells called among "the most advanced epidemiology bureaus, in terms of PhD status" — to what was really happening in Flint.

Hanna-Attisha held a news conference in Flint on Sept. 25 to announce her findings. A total of 1,746 test results from Flint children seen at Hurley were compared against 1,640 results from elsewhere in Genesee County. The number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4% between Jan. 1 and Sept. 15 of 2015. In certain ZIP codes, the change was even more troubling — jumping from 2.5% of the children tested to 6.3%.

The next day, an email from Health and Human Services spokeswoman Geralyn Lasher to fellow state officials, including Lyon and Gov. Rick Snyder's then-chief of staff Dennis Muchmore, seemed to rebut, if not dismiss, the pediatrician's findings.

"MDHHS epidemiologists continue to review the 'data' provided by a Hurley hospital physician that showed an increase in lead activity following the change in water supply," Lasher wrote, putting "data" in quotes. "Hurley conducted their analysis in a much different way than we do at the department."

Lasher, in her e-mail, said that Hanna-Attisha looked at only two years of data, and the state looked at "five comprehensive years and saw no increase outside the normal seasonal increases." The state's data, she noted, included all hospital systems in Flint, not just Hurley.

Lasher told the Free Press Friday that she put "data" in quotes because at the time, the health department had only received slides from Hanna-Attisha's PowerPoint presentation.

"In no way, shape or form was I being condescending on that," she said. "That just wasn't the full details to be analyzed."

It was then that "Dr. Wells got Dr. Hanna-Attisha and the epidemiologists all on the phone to say, 'We need to stop doing apples and oranges and start doing apples and apples,'" Lasher said.

When state epidemiologists reviewed Hanna-Attisha's data and followed her methodologies, they reached the same conclusions she did — the switch to Flint River water was causing elevated blood-lead levels in an increasing number of children in the city. Wells took part in a news conference reversing her department's position and announcing the findings Oct. 2, one week after Lasher's reassuring e-mail.

Since October, the state health department has transformed its epidemiological practices to better conform with the approach Hanna-Attisha took with Flint blood-lead data, analyzing it at the ZIP code level or even more locally to better understand what it can tell health officials, Wells said.

"This may inform lead surveillance programs — it's going to inform ours statewide, and already has. It's going to inform lead programs throughout the country," she said.

EPA regional chief Susan Hedman to step down Feb 1 after clean drinking water crisis in Flint

Lawyer Herald – January 23, 2016

Susan Hedman, a regional director of the U.S. Environmental Protection Agency in charge of the drinking water crisis in the Flint area, will step down on February 1. EPA chief Gina McCarthy announced Thursday Hedman's resignation, saying she accepts it to solely focus on restoring the clean drinking water in Flint.

Since the EPA is accused of acting too slow in resolving the issue of high lead content in Flint's water, McCarthy issued an emergency order demanding that the state and its head act to ensure the safety of the public. Business Insider reported that McCarthy wrote a letter to Governor Rick Snyder, saying the EPA "is deeply concerned by continuing delays and lack of transparency."

Meanwhile, according to *The Hill*, Hedman's office already knew since April 2015 that Flint's move to shift to another water supply could lead to higher chances pipe corrosion and a surge in lead levels. She opted not to tell the public and instead demanded Michigan officials to simply address the issue. Later on last year, lead poisoning became prevalent among children, which led to the Flint water crisis. Before Hedman, Michigan's Determinant of Environmental Quality Dan Wyant resigned December for being part of the controversy.

According to The Guardian, Michigan officials still aren't certain whether the Flint drinking water crisis and the increase in the cases of Legionnaires' disease in the area are linked. The Michigan department of health and human services reported Thursday that nine people died from the illness from June 2014 to October 2015 in Flint and surrounding Genesee County areas. The number was decreased from 0 after officials found out that some of the deaths weren't caused by Legionnaires.

Overall, there were a total of 87 cases of the Legionnaires' disease from June 2014 to November 2015 in the area. A third of the people infected used Flint water, which had high levels of lead.

Flint lead problem could be eased by recoating old pipes

Huewire – January 23, 2016, By Darrin Jackson

For many, it echoes the lackluster federal response to New Orleans during Hurricane Katrina in 2005.

The crisis in Flint is rooted in a decision made while the city was under control of an emergency manager appointed by the state.

The money is actually a revolving loan fund, not an appropriation, Dave Murray, spokesman for Gov. Rick Snyder, said late Friday.

Among other requirements, the EPA said the city should: Submit plans for ensuring that Flint's water has adequate treatment, including corrosion controls; ensure city personnel are qualified to operate the water system in a way that meets federal quality standards; and create a website where the public can get information.

Snyder, a Republican in his second term, was blasted by Hillary Clinton in her remarks after the recent Democratic presidential debate.

The water crisis started in 2014, when – as a cost saving measure – the city changed its water supply, from the city of Detroit, to the Flint River. "Communication about lead in drinking water and the health impacts associated with that, that's the role of [the Department of Health and Human Services], the county health department and the drinking water utility".

Michigan National Guard member Zach Burrell helps distribute water to residents in their cars in Flint, Michigan, on January 21.

"The baby drinks bottled water but she does have to bathe in it", Parker said of his 4-year-old.

Long-term exposure for infants and children can lead to "delays in physical or mental development; children could show slight deficits in attention span and learning abilities".

Snyder apologized for failing the people of Flint. The Flint native said he's still trying wrap his mind around what happened.

Water is an essential part of the meat company's production; when making its famous franks, Koegel Meats taps into the township water supply, which comes from the Detroit water system.

"We have to live with the consequences", he said. They've allowed themselves to be captured and they haven't followed the science... In the early 1970s, the automaker employed 80,000 blue- and white-collar workers in the area. Fewer than 8,000 GM jobs remain. "It's God's work. He's bringing out the best in a lot of people". This story isn't just about Flint.

On a visit to Detroit on Wednesday, Obama said: “I know that if I was a parent up there, I would be beside myself that my kid’s health could be at risk”.

A switch in the water supply in April 2014 led to elevated levels of lead in drinking water. They would never do this to Ann Arbor.

Those in disbelief over the events in Flint will find little comfort in a new set of revelations published by the Guardian on Friday afternoon.

Bernie Sanders, who is running for the Democratic presidential nomination, demanded Snyder’s resignation, saying that “a man who acts that irresponsibly should not stay in power”.

Moore also cited deaths from Legionnaires’ disease recorded in the Flint area over the past two years and only announced publicly last week by Snyder. Milman explained that practices like that “have been criticized by the EPA for not providing accurate results, with the agency telling authorities not to use them”.

When the Water Turned Brown

The New York Times – January 23, 2016, By Abby Goodnough, Monica Davey and Mitch Smith

FLINT, Mich. — Standing at a microphone in September holding up a baby bottle, Dr. Mona Hanna-Attisha, a local pediatrician, said she was deeply worried about the water. The number of Flint children with elevated levels of lead in their blood had risen alarmingly since the city changed its water supply the previous year, her analysis showed.

Within hours of Dr. Hanna-Attisha’s news conference, Michigan state officials pushed back — hard. A Department of Health and Human Services official said that the state had not seen similar results and that it was working with a much larger set of data. A Department of Environmental Quality official was quoted as saying the pediatrician’s remarks were “unfortunate,” described the mood over Flint’s water as “near-hysteria” and said, as the authorities had insisted for months, that the water met state and federal standards.

Dr. Hanna-Attisha said she went home that night feeling shaky and sick, her heart racing. “When a state with a team of 50 epidemiologists tells you you’re wrong,” she said, “how can you not second-guess yourself?”

No one now argues with Dr. Hanna-Attisha’s findings. Not only has she been proved right, but Gov. Rick Snyder publicly thanked her on Tuesday “for bringing these issues to light.”

Nearly a year and a half after the city started using water from the long-polluted Flint River and soon after Dr. Hanna-Attisha’s news conference, the authorities reversed course, acknowledging that the number of children with high lead levels in this struggling, industrial city had jumped, and no one should be drinking unfiltered tap water. Residents had been complaining about the strange smells and colors pouring from their taps ever since the switch.

Already this month, federal and state investigations have been announced, National Guard troops were distributing thousands of bottles of water and filters, and Mr. Snyder was calling for millions in state dollars to fix a situation he acknowledged was a “catastrophe.”

Yet interviews, documents and emails show that as every major decision was made over more than a year, officials at all levels of government acted in ways that contributed to the public health emergency and allowed it to persist for months. The government continued on its harmful course even after lead levels were found to be rising, and after pointed, detailed warnings came from a federal water expert, a Virginia Tech researcher and others.

For more than a year after an emergency manager — appointed by Mr. Snyder to oversee the city — approved a switch from the Detroit system to water from the Flint River to save money, workers assigned to manage the city's water system failed to lower lead risks with a simple solution: adding chemicals to prevent old pipes from corroding and leaching metals like lead. Disagreements and miscommunication between state and local officials about what federal law requires of so-called corrosion control measures further delayed fixing the problem, the documents show.

"This could have been nipped in the bud before last summer," said Daniel Giammar, an environmental engineer at Washington University in St. Louis.

The testing of homes in Flint for lead, too, was insufficient and flawed, some experts say. Officials failed to focus on the many homes with lead service lines that were most likely to be tainted, instead looking at wider problems that would have muted the calls of alarm.

The city authorities also urged, and state regulators allowed, methods of sampling that experts say had been shown to underestimate lead levels. Residents were advised, for example, to run their water before taking samples, a move that tends to flush out concentrations of lead particles that might have accumulated.

And through it all, officials persisted in playing down and dismissing the concerns of Flint residents — one referred to concerned residents groups as "anti-everything" — and authoritatively vouching for the water's purity, even as they themselves were debating whether it was pure.

Three months before Dr. Hanna-Attisha voiced her fears and findings, a regulations manager for the federal Environmental Protection Agency had sent a detailed interim report to the state and federal authorities that included unambiguous warnings like this: "Recent drinking water sample results indicate the presence of high lead results in the drinking water, which is to be expected in a public water system that is not providing corrosion control treatment."

It is unclear how many people have had elevated lead levels in their blood over the last year and a half. The state has identified 233 since April 2014, but Dr. Hanna-Attisha said its numbers likely "grossly underestimate" exposure, partly because testing was generally limited to 1- and 2-year-olds until recently. Lead remains traceable in the blood for only about a month after exposure.

As criticisms have mounted, high-ranking officials have resigned, including Howard Croft, Flint's director of public works; Dan Wyant, the state's Environmental Quality director; and Susan Hedman, the E.P.A. regional director.

Dave Murray, a spokesman for Mr. Snyder, issued a statement on Friday calling the crisis "a failure of government — at the local, state and federal levels." He added that the governor was "committed to fixing the problem and addressing the immediate and long-term needs of the people of Flint."

Dr. Hanna-Attisha also cited the wholesale failure of government. "They had the information," she said. "They just weren't looking closely or believing it."

Repeated Assurances

On April 25, 2014, Flint, whose population had dwindled from more than 195,000 in 1960 to fewer than 100,000 people, switched to using the Flint River as its water supply. The city had drawn water from Detroit's system for decades, but it was expensive, and so Flint joined efforts to create a new, regional system that would draw from Lake Huron.

Costs had become a central concern in a city that has lost thousands of auto industry jobs. Fiscal troubles were so significant that the state sent an emergency manager — with ultimate decision-making power — to oversee a recovery. Until the new pipeline to Lake Huron was constructed, the city would take its water from the Flint River, which it had used as a backup.

City leaders toasted the switch with cups of water. Residents were less sure. For years the Flint River had been a dumping ground — for cars and even bodies. Aware of the doubts, the city's first news release on the switch trumpeted state and local officials' assurances.

Then came the odd colors from the tap — greens and browns — and the offensive smells and tastes. Soon there were reports of rashes and clumps of hair falling out. Parts from a General Motors engine plant here were corroding, so the company stopped using Flint's water.

Tammy Loren, a mother of four who rents a home, was having a hard time believing the answers she got about why her sons' skin had itchy rashes. At various times over the last year and a half, she said, their doctors diagnosed scabies, ringworm and other fungal infections, but prescribed medicines never worked. The family even had the home treated by an exterminator, thinking the problem might be fleas.

"The water was brown, and it had a disgusting smell," said Ms. Loren, whose sons are now 14, 12, 11 and 10. "It was like dirt coming out."

For months, Ms. Loren said, she conducted her own research on the Internet and asked plaintive questions on community Facebook pages. Her family started drinking bottled water when it could, but Ms. Loren, who receives federal disability payments for her back and other problems and relies on food stamps, said it was not that often.

"There was times when we couldn't afford it," she said. "We just kept drinking out of the tap."

Through it all, the government reassurances were constant, insistent and unequivocal. "It's a quality, safe product," Mayor Dayne Walling told The Flint Journal in June 2014.

At points, the city's water tested positive for E. coli bacteria, which can cause intestinal illness, and residents were advised to boil their water. City officials pumped extra chlorine into the system to address the bacteria issue, which led to elevated levels of total trihalomethanes, or TTHMs, chemical compounds that may cause health problems after long-term exposure.

A state briefing in February last year acknowledged the TTHM level was "not 'nothing' " but also not an imminent "threat to public health."

In July, Flint sent residents a letter saying it was "pleased to report" the "water is safe."

But officials' efforts to soothe residents about other contaminants seemed to overshadow the growing signs of trouble about lead.

By March 2015, with residents turning up at public events bearing bottles of murky water, the City Council voted to "do all things necessary" to reconnect to Detroit's water system. But the state-appointed emergency manager, Gerald Ambrose, said no. He repeated the official mantra: The water meets state and federal standards. And he noted, once more, that Detroit water was among the most costly in the state.

"Water from Detroit is no safer than water from Flint," Mr. Ambrose said.

Corrosion Control Failure

Behind the scenes, though, officials seemed far less sure.

By the end of February, Miguel Del Toral, the E.P.A. regulations manager who had learned of high lead content in one Flint resident's water, was raising a fundamental question with his state and federal colleagues: What was Flint using to treat the river water to avoid corrosion?

"They are required to have O.C.C.T. in place which is why I was asking what they were using," he wrote in an email on Feb. 27, using the initials for "optimal corrosion control treatment."

Surely, the assumption was, the city was adding a chemical to the water to coat its aging pipes and prevent corrosion, since controlling corrosion is required by a federal rule governing lead and copper. The water that Flint had drawn for years via Detroit from Lake Huron had been treated with orthophosphate, a common anti-corrosion additive. And Flint River water is naturally even harder and more corrosive, experts say, than the water the city was buying from Detroit.

An official from Michigan's Department of Environmental Quality answered Mr. Del Toral's inquiry the same day: Flint has "an optimized corrosion control program." But less than two months later, the state said it had been wrong. There actually was no treatment in place in Flint to stop corrosion, a timeline of events provided by the state now shows.

The authorities themselves did not agree on what the federal rules meant. Some state officials believed that testing needed to be done over a year before a new plan could be put in place to block corrosion, documents suggest, while other officials thought the treatment with chemicals needed to start the moment Flint began receiving water from the river.

"We made a mistake," Mr. Wyant, then the state's environmental quality director, said in October. Corrosion controls, he said, "should have been required from the beginning."

The lead issues should have been anticipated long before the city switched water supplies, experts said. "I think that's pretty obvious, in going from having a corrosion inhibitor to not having one, you might have expected to have increased corrosion," said Professor Giammar.

By June, Mr. Del Toral wrote in a memo to state and federal colleagues that Flint had essentially stopped providing treatment used to mitigate lead and copper levels in drinking water, which he called a "major concern from a public health standpoint."

E.P.A. officials contend that they pressed Michigan regulators to take more decisive action after Mr. Del Toral's report, but for months federal officials did little to inform the public of those findings or take decisive action. It was not until Thursday that the federal agency issued an emergency order and assumed oversight of lead testing in Flint.

Flaws in Testing

All along, Flint's water was being tested for lead.

Yet when health officials studied tests showing higher levels of lead in children's blood in the summer of 2014, they suggested that the increases were a result of ordinary seasonal fluctuations. Water samples, too, showed rising levels of lead in the first half of 2015 compared with late 2014, and a Flint Journal data analysis concluded that they were at their highest in 20 years.

There was so much lead found in water at the home of LeeAnne Walters that officials shut her water off in April and temporarily installed a garden hose to carry water from a neighbor's house. Still, state officials noted that the city's levels remained within federal and state standards.

But the water tests themselves were flawed, experts say.

According to the American Civil Liberties Union of Michigan, which conducted its own investigation, as did researchers at Virginia Tech, the city was not only advising residents to run their water before collecting a sample, but doing other things to “skew the outcome of its tests to produce favorable results.” For example, the A.C.L.U. reported in September, the city retested water from homes found to have low lead levels, but not from homes whose initial levels were high.

The city also appeared to be unsure which houses had lead service lines connecting them to its water distribution system, the report said. Federal law requires cities testing for lead in drinking water to focus on homes with the highest risk for contamination, but the report found no evidence Flint had done so.

Dr. Hanna-Attisha said that after she shared her methodology with the state, it replicated her findings. Mr. Snyder then announced that the state would provide filters and test tap water.

Marc Edwards, the Virginia Tech professor who helped identify and expose Flint’s lead problem, said the state “had no sense of urgency at all, nor did E.P.A.”

Ms. Loren, the mother of four, said her sons’ skin remained irritated, and she is worrying obsessively about their lead levels, particularly that of her 11-year-old, who has learning disabilities.

“My trust in everybody is completely gone, out the door,” she said. “We’ve been lied to so much, and these aren’t little white lies. These lies are affecting our kids for the rest of their lives, and it breaks my heart.”

Flint sets a new low for hazardous water

The Toledo Blade – January 24, 2016, By Tom Henry

FLINT, Mich. — Weakened by years of neglect, notoriously down-and-out Flint has blown past Toledo as America’s new poster child for water pollution.

That’s evident in the worry in the eyes of Flint’s 100,000 residents, a hardy bunch who — like Toledo — come from a city steeped in automotive history and union pride.

But unlike Toledo, where nearly 500,000 residents had to avoid algae-infested water the first weekend of August, 2014, Flint’s residents have been exposed to a much worse poison — lead — for nearly two years.

RELATED CONTENT: Lead-based paint still poses risk for families in Toledo

The city shown in ruins on the big screen in 1989, when Michael Moore chronicled his hometown’s deterioration in his award-winning documentary *Roger & Me*, is having its mettle put to the test like few, if any, U.S. cities in modern history.

Nobody knows when their water will be safe to drink again.

They’re told to put their faith in water filters distributed by the Michigan National Guard until something better happens.

Experts know the damage has been done and the best long-term solution is a complete overhaul of Flint’s underground distribution pipes and those throughout every house — a project that would cost untold billions of dollars.

Next week, the Michigan Legislature is being asked to provide \$28 million more in relief aid, mostly to buy more faucet filters and bottled water. President Obama's pledge to commit an additional \$80 million in aid next week also is seen by many people as a proverbial drop in the bucket.

Toledo blew past Charleston, W.Va., where a chemical spill into the Elk River fouled water for 300,000 residents in January, 2014. Two decades before that, tap water was fouled for weeks in Milwaukee, where a 1993 outbreak of the parasite cryptosporidium killed 69 people and sickened more than 400,000.

IN PICTURES: The Flint water crisis

The sad irony is the crises in Milwaukee, Toledo, and Flint occurred in the water-rich Great Lakes region, often perceived as the last place where access or quality should be an issue.

"Every one of these water crises — Charleston, Toledo, and Flint — are unique. But the common thread is we've been taking our great water system for granted in this country," said Peter Gleick, president and co-founder of the Pacific Institute in Oakland, Calif., which tracks global water stresses and publishes an inventory of the world's water hot spots every two years.

"It's inexcusable anywhere, but it's especially inexcusable in a country that could have afforded to solve this problem a long time ago," Mr. Gleick said. "We've taken it for granted forever that we'll turn on our taps and high quality water will come out. We can't assume that will happen all by itself."

How it began

Flint Mayor Karen Weaver points out her city's water crisis began nearly two years ago but fell on deaf ears for a long time even after poor and largely disenfranchised residents showed up screaming at public meetings with jugs of brownish-orange water drawn from their faucets.

By any measure, Flint's water crisis has erupted into a national story with huge ramifications for the 2016 presidential election.

The story caught fire in the fall of 2015 after Dr. Mona Hanna-Attisha, director of the pediatric program at the Hurley Medical Center in Flint, and Virginia Tech's Marc Edwards, an expert on municipal water quality, came up with hard scientific evidence that high-level Michigan Department of Environmental Quality and U.S. Environmental Protection Agency bureaucrats — despite their best efforts at soft-pedaling the crisis — couldn't deny.

Michigan DEQ Director Dan Wyant and his chief spokesman, Brad Wurfel, resigned Dec. 29. Gov. Rick Snyder apologized that day and during his State of the State address Tuesday.

On Thursday, the U.S. EPA's Midwest regional chief, Susan Hedman, accused of suppressing a federal EPA employee familiar with the Flint crisis, announced she would step down Feb. 1.

On Friday, the U.S. EPA blamed the state of Michigan and the city of Flint for responses that "have been inadequate to protect public health."

Citing "serious, ongoing concerns with delays, lack of adequate transparency, and capacity to safely manage the drinking water system," the federal EPA vowed to begin publishing sampling results on its website. It announced it has instituted, effective immediately, a new policy for staff members to report serious public health issues to their supervisors.

Scandal's effects

Dr. Hanna-Attisha said she "was naive and at first didn't believe it" when the scandal broke.

Her office holds records of blood drawn from most Flint children for routine lead tests between the ages of 1 and 2. Documenting the trend, she said, was the “easiest research project I ever did” because it only required about two weeks of analyzing records.

She and Mr. Edwards were initially called hysterical, said Dr. Hanna-Attisha, who said much of the criticism came from the Michigan DEQ.

What gnaws at her is how 8,000 to 9,000 Flint children aged 6 or under — nearly a tenth of the city’s population — are at high risk for brain damage and a number of other neurological, growth-impairing maladies associated with lead poisoning.

Most come from poor families who already face an uphill battle for a decent life, Dr. Hanna-Attisha said. Almost 57 percent of Flint is African-American. With 40 percent of city residents living below the poverty line, it is one of America’s poorest cities.

She said many of those children likely will never develop into the adults they could have been.

“There is no safe level of lead,” Dr. Hanna-Attisha said.

She cited studies that link the metal to lower IQs, impaired motor skills, attention deficit disorder, behavioral problems, hyperactivity, and even criminality as an adult.

Research also shows it can cause DNA changes that get passed on to future generations.

“All of the evils of lead are well-documented,” Dr. Hanna-Attisha said. “These kids have every obstacle in the world in front of them. Now, they have lead poisoning, too.”

There is no known antidote. The best Dr. Hanna-Attisha said she can do is reassure young mothers “with that fear and that anguish and that panic and that trauma in her eyes” that not every child metabolizes lead the same.

Putting at-risk children on diets high in iron, calcium, and vitamin C can help absorb some of the lead. But that’s a long shot at full recovery, she said.

“If you could think of something to put into a population to keep them down now and forever, it is lead. It is the most damning thing you could do,” Dr. Hanna-Attisha said. “That’s why this is such an emergency and it’s been an emergency for almost two years. We’ve exposed an entire population to this neurotoxin and what is going to be the impact in five years, in 10 years, and in 20 years? What is going to be the impact on our education system, our mental health system, and our criminal justice system?”

Flint’s children

Late Wednesday afternoon, a CNN crew traveling with the cable network’s chief medical correspondent, Dr. Sanjay Gupta, was packing up its gear in another room as two more journalists were brought into Dr. Hanna-Attisha’s office for what has become a steady string of daily interviews.

Dr. Hanna-Attisha took a quick call from the Rev. Jesse Jackson as her guests were being seated.

She emphatically told the Rev. Jackson she can’t leave Flint to meet him in Chicago anytime soon and — surprisingly — implored him not to send more cases of bottled water.

“We don’t need more water. We need people to invest in these kids,” Dr. Hanna-Attisha said and directed him to a website flintkids.org, which is making plans to support kids victimized by lead poisoning.

During her interview with The Blade, Dr. Hanna-Attisha said she and other researchers will be tracking many of Flint’s most at-risk kids for at least the next 20 years.

“We need to do good for these kids,” Dr. Hanna-Attisha said. “These kids did nothing wrong.”

The following afternoon, Dr. Gupta reported on national television he’d found exposure levels among Flint’s most vulnerable age group “off the charts.”

Though health officials agree there is no safe level of lead, they generally agree the threshold for it should be no higher than 5 parts per billion, he said.

One Flint child, according to Dr. Gupta, had a blood-poisoning level of 13,000 ppb.

“It’s among the highest I’ve ever seen in the world,” Dr. Gupta said during his segment.

Political decisions

The birthplace of General Motors, Flint has seen its urban decay greatly exacerbated by the automaker’s decision to shut down factories there years ago.

But GM’s decision to abandon Flint is only part of the crippling domino effect: In 2013, Flint was one of five Michigan cities Gov. Snyder put under control of an all-powerful, state-appointed emergency operations manager to avert what appeared to be looming bankruptcies.

Many of the decision-making powers vested in local elected officials were, under Michigan law, transferred to emergency operations managers. In theory, that cuts down political stalemates and streamlines efforts to help cities regain fiscal strength.

The emergency operations manager at the time used his political clout to have Flint break ties with Detroit.

Detroit had been supplying Flint treated Lake Huron water for decades but at much higher costs than what Detroit residents pay.

Flint began making plans to eventually treat its own Lake Huron water. Its decision to draw from the Flint River, known for a legacy of corrosive automotive chemicals, was seen as a short-term fix to fill a three-year window.

The biggest mistake, said Virginia Tech’s Mr. Edwards, was the emergency operation manager’s decision to save a mere \$100 a day by not having Flint treat the tap water with corrosion-inhibitors, a standard practice at all municipal treatment plants.

That allowed pipes to corrode and leach lead as well as other contaminants.

Flint became the only known U.S. city to skip that vital treatment process — an oddity Dr. Hanna-Attisha said inspired her to begin checking medical records on file for Flint kids after she was tipped off about the decision by a high school friend who works at the U.S. EPA’s headquarters.

The American Water Works Association, the Washington trade group representing the nation’s water-treatment plant operators, said in a statement last week that switching over to a new water supply always carries a big risk because of the complexity of water chemistry.

Many of the health effects in children are likely to take three to five years to develop.

But the Michigan Department of Health and Human Services said in a recent statement that Genesee County had a spike in Legionnaires' disease — a bacterial infection that causes a severe type of pneumonia transmitted through inhaled water — in the summer of 2014 and 2015.

Of 87 known cases afflicting residents aged 26 to 94, 10 resulted in death.

Mr. Edwards said the whole Flint mess might have been avoided if that standard corrosion-inhibitor protocol had been followed.

Records show the Michigan DEQ and the U.S. EPA knew about the situation, but did not act.

"All of the leaks, the lead, and quite possibly the Legionnaires' disease could have been avoided," Mr. Edwards said. "I don't think initially they did it to save money. I think they forgot."

Loss of faith

In the aftermath of Toledo's 2014 water crisis, then-Mayor D. Michael Collins told The Blade that algal toxins did far more than pollute the city's water when they breached the aging Collins Park Water Treatment Plant and made their way into the metro area's water supply.

He said Toledo's event became a "crisis of confidence" in governmental officials.

That theme resonates strongly from the rough-and-tumble streets on Flint's north side to Mr. Edwards' office, a 13-hour drive way.

"We're in this problem — it's a man-made problem — because we weren't told the truth," Genesee County Sheriff Robert Pickell said.

His deputies helped the National Guard, the American Red Cross, and others distribute home water filters and cases of bottled water from a Flint fire station door-to-door.

"People lied to us," the sheriff said. "People have lost faith in the capacity of government to work with them."

Lt. Col. Ray Stemitz said he and other guardsmen "truly empathize with all of the residents of Flint."

Flint began receiving treated water from Detroit in October again, yet what came out of their faucets continued to be discolored for weeks.

"It's still brown, but I'd say it's a little orange, too," Drew Williams, 30, of Ridgeway Avenue said.

He said he worries about his 4-year-old daughter, Kiera.

At the Hasselbring Park Senior Community Center on Flint's north side, Tobias Lee, 66, questioned why impoverished Flint residents are expected to pay for contaminated, unfiltered water they used.

One woman at Fire Station No. 3 on Martin Luther King Avenue showed a \$385 bill she received for water usage. Several people interviewed said they are charged in excess of \$200 a month.

Trina McNeil, 43, worries about her children, Niko, 18, and Dayvion, 14. She compared Flint's situation to that of New Orleans in the aftermath of Hurricane Katrina in 2005.

"Sorry is not going to fix the pipes," Ms. McNeil said of Gov. Snyder's apology. "The city of Flint is pissed off right now."

Meanwhile, the leader of a Flint independent film-making group called Team 810 Productions said he has been using some of the group's proceeds to help distribute cases of bottled water to city residents for weeks.

Yusuf Bauswell, 43, spent seven years in the Michigan Department of Corrections on charges of uttering and publishing, robbery, and failure to pay child support.

He said Team 810 is able to get bottled water to unconventional residents, such as the city's homeless or those who don't want a National Guard or police vehicle coming to their front door.

Residents together

James Arnold, 44, a Hasselbring volunteer and Flint native who works at GM's Toledo Transmission Plant, said residents have felt disenfranchised for years but especially since Gov. Snyder put fiscal decisions under the control of emergency managers.

"We were already devastated. It didn't start with the water. The water was the coup de grace," said Brenda Purifoy, a Mount Morris Township resident who was the city's last paid ombudsman until her position was eliminated with the appointment of the first emergency manager on Dec. 2, 2011.

Anita Brown, 50, Ms. Purifoy's former chief investigator, said the ombudsman's office gave Flint residents "an avenue to vent."

Surprisingly, though, it's bad water that's bringing residents together, Ms. Purifoy said.

Darryl Matiere, Sr., 52, an Army sergeant and National Guard member from 1983 to 1992, called Gov. Snyder a "coward" and the situation "pitiful." But he agreed the water crisis has formed a bond among Flint residents.

"We have come together standing as one," he said.

Corrin Nelson, 38, said she worries about her three children. Her 3-year-old son, Kaesey, has autism.

A Flint resident for 15 years, she said she might move back to her home state of Georgia.

LaWana Walker, 43, and Tychernises Butler, 39, said they have had patches of hair fall out of their scalps. They blame it on the water.

Sanai Miller, 40, said it's offensive to learn what the government knew.

He worries about his 5-year-old boy, Messiah Simpkins.

"I don't have no faith in our government," he said. "They can hand out all of the water they want, but they've got to fix the pipes."

More than 500 lawsuits, including three class-action lawsuits, have been filed, according to news reports.

LaToya Jenkins, Hasselbring Park community center director, oversees near-daily shipments of donated bottled water and hears many of the frustrations.

She said Flint will endure “by the grace of God.”

“We’re just going through a storm right now,” Ms. Jenkins said. “Once the storm is over, the sun will shine. That’s how God works.”

Health care community helps Flint respond to emergency

Crain’s Detroit Business – January 24, 2016, By Jay Greene

Physicians in Flint sounded the alarms early last fall about possible lead poisoning.

Now, local health care providers and insurers are helping the city respond to the crisis.

When the city switched to the Flint River in April 2014, residents immediately complained about the water's smell, taste and color, said Kirk Smith, CEO of the **Flint Area Health Coalition**, which is coordinating the local health effort.

Despite complaints, Flint residents were told for more than 18 months by state and city officials that tests indicated the water was fine and not to worry.

But in late September, Mona Hanna-Attisha, a pediatrician at **Hurley Medical Center**, a city-owned hospital in Flint, announced tests she conducted showed up to 9,000 children in Flint were being exposed to double and even triple the average blood lead levels from the water.

Hanna-Attisha's study, which has been published in the *American Journal of Public Health*, showed the percentage of children 6 years old and younger with more than 5 micrograms per deciliter of lead in their blood increased from 2.1 percent when Flint purchased Lake Huron water from Detroit to 4 percent after the switch to the Flint River.

"Once I got the data, I shared it with other pediatricians (that included Dr. Lawrence Reynolds, CEO of **Mott Children's Health Center**)," said Hanna-Attisha, director of the Hurley pediatric residency program. "I am new and needed an army behind me."

But her warnings at a Sept. 24 press conference were criticized by the establishment in Lansing for more than a week.

"Even when the state was fighting back, saying I was playing political football, causing hysteria, slicing and dicing the data and that we were wrong, I had the full support of the physician community and my hospital," she said.

Fellow physicians at the **Genesee County Medical Society**, at local hospitals that included Hurley, **Genesys Health** and **McLaren Flint**, and the health coalition echoed her concerns, Smith said.

A doctor-to-doctor conversation with Eden Wells, M.D., the chief medical executive with the **Michigan Department of Health and Human Services**, was the game changer that turned around the state's attitude, said Hanna-Attisha, who now is lead with the **Michigan State University/Hurley Pediatric Public Health Initiative**.

Wells, also a clinical associate professor of epidemiology at the **University of Michigan's School of Public Health**, said state epidemiologists were already trying to replicate Hanna-Attisha's study, which they did Oct. 1.

The next day, Gov. Rick Snyder ordered the distribution of filters along with water testing and blood testing for children.

But it wasn't until Oct. 16 that the city switched back to the Detroit water system. And it wasn't until Dec. 15, when newly elected Flint Mayor Karen Weaver declared a state of emergency, followed by Genesee County on Jan. 5 and Michigan on Jan. 6.

"Those two months felt like a year," Hanna-Attisha said. "I wish they could have gone back to April 2014" and never made the decision to use the Flint River.

But Hanna-Attisha said even though the Detroit-supplied water is less acidic, Flint's water pipe infrastructure has been damaged and there is still ongoing lead exposure.

"Everybody is really trying to help now," she said. "We had a meeting (last week) with all the Medicaid plans in the county. We need to all work together as providers, health plans, to address the needs of our children for the long term."

Long-term vigilance

Officials for **HealthPlus of Michigan, Molina Healthcare of Michigan, McLaren Health Plan and Meridian Health Plan of Michigan** said they are stepping up state-mandated lead screening tests for children 6 or younger. They have donated money and also are working closely with the **Genesee County Health Department** and Flint schools to provide staff for screening exams.

Area hospitals also have stepped up their efforts through the Flint health coalition and clinics they operate in the city, said officials with Genesys, McLaren and Hurley.

"We have been talking about prevention to make sure our members go to their primary care physicians," said Christine Surdock, COO of Molina, which began operations in Genesee on Sept. 1 when it acquired HealthPlus' 70,000 Medicaid members.

"We have met with all the large providers in the area, including the health department," Surdock said. "We have identified children without lead test screening, and when we get the blood test done, we have expanded our case management program for that population."

Surdock said Molina and other plans don't yet know the long-term implications for children. "All the medical directors are having conversations at this point," she said.

At HealthPlus, CEO Mike Genord, M.D., and executive Nancy Jenkins said tests have shown rising lead levels in children in the Flint area.

Genord said HealthPlus has 8,000 commercial members in the affected ZIP codes in Flint.

"We have care coordination teams who have reached out there and provided them with information and clean water," he said.

McLaren Health Plan's CEO, Kathy Kendall, said the HMO has been involved in the lead crisis since last fall, focusing on the 5,000 members in Genesee ages 6 and under.

"We have provided education and doubled down on lead testing in the most impacted ZIP codes. We have done mass screenings in the schools," Kendall said. "We work closely with our primary care physicians to do developmental screens and encourage change in diets."

While "there is no magic pill for lead" poisoning, Wells said, it will be up to responsible officials to ensure children get all the medical and behavioral support they require.

Because lead screening only shows exposure within 20 to 30 days, Hanna-Attisha said longer-term tests are needed on children for the foreseeable future.

"Testing now underestimates lead exposure," she said. "The CDC will do longer-term tests to collect (children's) teeth. It is good way to measure lead exposure."

Other symptoms from lead poisoning include irreversible brain damage, lower IQ, developmental delays, speech problems, a boosted risk for behavioral issues and other serious chronic conditions.

To address longer-term problems, Smith said the Flint health coalition has formed the **Flint Child and Health Development Fund**, with a fundraising goal of \$100 million. The fund will provide child development, nutrition, education, social services, medical and behavioral support, he said.

The coalition also is administering the **Genesee County Children's Healthcare Access Program**, or CHAP, one of nine agencies in Michigan. The program helps physicians with social support services for families.

"Our service volume has been increasing every month," said Smith, adding that last week CHAP got 20 referrals in one day.

But during the last year, Bobby Mukkamala, M.D., an otolaryngologist in Flint who is vice chairman of the **Michigan State Medical Society**, said physicians in Flint were frustrated the state did not act sooner.

"We were discussing it at the medical staff level for months, long before the state of emergency," Mukkamala said. "It wasn't taken seriously until somebody started screaming about it."

Subject: Contributing time, muscle and money

During this month's Martin Luther King Jr. holiday weekend, some state employees turned their "day off" into a "day on" in Flint. There, they delivered bottled water, water filters, replacement cartridges and water testing kits to families. The volunteers joined other Michiganders, turning Dr. King's birthday observance into a day of service.

Mike Zimmer, director of the Office of Good Government and the Department of Licensing and Regulatory Affairs, has shared a link – www.helpforflint.com – that offers other opportunities to contribute time, muscle and money to bring clean drinking water to the community. Here in DTMB, some of our employees didn't wait for an invitation to lend a hand. Office of Retirement Services staff contributed funds that were used to buy 31 cases and 23 gallons of water, which a local organization transported to Flint.

Autumn Hubbard, Ambrea Mack and Sarah Esquivel, who are in the photo at the left, nearly emptied the shelves at their local grocery store. Thanks for your efforts.

everyone.

Now work.

Last week, I signed a new policy that formalizes the annual employee review process and sets expectations for employees and managers. [Administrative Policy 200.37](#) establishes consistent standards for implementing performance plans and reviews. Some of the standards are practices we have followed for years. Others are new. Some of particular note include:

- The mandatory use of HRMN
- A standard Feb. 1-Jan. 31 rating period for all employees
- An Individual Development Plan that specifies training or development programs for each employee
- Competencies and objectives that align to DTMB goals or scorecard metrics
- Consequences for managers and supervisors who do not complete the review process as required

A fundamental role of each DTMB manager or supervisor is to provide employees with direction and feedback on their performance. Employees also are expected to take an active role in pursuing professional development opportunities and achieving their competencies and objectives. I encourage you to review the new policy and talk with your manager or supervisor if you have questions. Of course, I welcome your questions and input as well. Please send your comments and ideas to me at behend@michigan.gov.

I know these have been busy weeks for many of you as you take on additional responsibilities and work hard to provide resources and services for our customers and citizens across the state. Please know that your hard work has not gone unnoticed. Thank you for everything you do, every day.

Have a great week,

David

Four cases of listeriosis in Michigan

WLKM – January 26, 2016

The Michigan Department of Health and Human Services has been collaborating with local health departments on a multistate foodborne outbreak of listeriosis.

Rebecca Burns, director of the Branch-Hillsdale-St. Joseph Community Health Agency, said listeriosis is a bacterial infection that causes fever and muscle aches, often preceded by gastrointestinal symptoms.

Twelve people in six states have been infected with the outbreak strain of listeria since July 2015, including four cases in Michigan.

The source of the illnesses was not known until January 2016, when the laboratory results from packaged salad collected at a Dole processing facility in Springfield, Ohio, was linked to the illnesses. Laboratory tests showed that the strain of listeriosis found in the plant was similar to that found in the people who became ill.

Subpoenas served for Gov. Rick Snyder's Flint water emails

MLive – January 25, 2016, By Gary Ridley

FLINT, MI – Gov. Rick Snyder's emails and other communications have been subpoenaed as part of an ongoing class-action lawsuit over the city's water crisis.

Subpoenas were served Monday, Jan. 25, on Snyder and the Michigan Department of Environmental quality as part of civil action over alleged personal injury and physical damages suffered by residents during the city's water crisis.

The subpoenas are seeking the emails, text messages or other documents sent or received by Snyder, his staff and Flint's former emergency managers relating to the Flint River as a source of drinking water, Flint River quality and the Karegnondi Water Authority, according to the attorneys who filed the lawsuit.

Similar documents are requested from the DEQ.

Snyder's representatives declined to comment on the subpoenas.

"It would be inappropriate to discuss pending litigation," said Snyder's Press Secretary Dave Murray.

The contents of Snyder and his administration's communications have become a focal point in the city's water crisis.

Snyder's office, in what Murray called an "unprecedented move" released nearly 300 pages of emails from 2014 and 2015 last week in response to demands that he disclose his communications involving the Flint water crisis.

The release included emails, talking points and previously-released studies, but has drawn criticism from some who alleged the release may have been incomplete. The release also did not include communications from 2013, when the city began receiving its drinking water from the Flint River

Emails from Snyder's office are exempt from the state's Freedom of Information Act, and the governor declined to release emails from his staff.

The subpoenas seek records dating back to the beginning of 2011.

The lawsuits were filed by a team of lawyers from across the state, including Royal Oak-based Pitt McGhee Palmer & Rivers, Detroit-based Goodman & Hurwitz, Ann Arbor's Deborah LaBelle and Flint's Trachelle Young.

Flint residents were told not to drink their water in October. However, residents are still required to pay for the water and the city has been sending shutoff notices to those who do not comply.

The city of Flint switched its water source to the Flint River in April 2014. Testing showed high levels of lead in the blood of children and infants since the switch. This month, state and Genesee County officials announced the Flint area has also seen a spike in the cases of Legionnaires' disease, including nine deaths, although a link to the water switch has not been confirmed.

Snyder declared a state of emergency in Genesee County on Jan. 5 and earlier this month President Barack Obama signed an emergency declaration opening the door for federal aid to deal with Flint's water crisis.

Flint Isn't the Only Michigan Town That Should Be Worried About Lead

City Lab – January 25, 2016, By Natalie DelGadillo

A new map reveals elevated lead levels across the state—though paint, not water, is the culprit.

The contaminated water crisis wreaking havoc on Flint, Michigan, is easily one of the worst public health and environmental disasters in recent memory. It's been the subject of widespread public outcry, calls for Michigan Governor Rick Snyder's resignation, and a federal investigation.

But while Flint is clearly an extreme case, it is by no means alone in exposing its residents to dangerous levels of lead. Many other Michigan cities also show signs of elevated lead exposure in children—although in these cases, the problem doesn't come from water but from exposure to lead paint in old houses.

Using information from the Michigan Department of Health and Human Services, Mike Wilkinson of *Bridge* magazine pieced together an interactive map that provides a startling picture of elevated lead levels across the state of Michigan as a whole. The map's dark red splotches indicate places where 10 or more children have shown

elevated levels of lead in their blood. The lighter red splotches indicate where fewer than 10 children tested had seriously elevated lead levels.

On the [full interactive page](#), you can zoom in to see how many children tested positive for elevated lead levels in a given zip code.

The exposure to poisonous water in Flint clearly constitutes an urgent public health crisis. But it's not the only place in Michigan where the direct living environment exposes families to dangerous toxins, and it's not the only place the public should be worried about.

In Flint, MDHHS eyes possible Legionnaires' disease sites

WKAR – January 26, 2016, By Mark Bashore

As state, federal and local officials continue working to gain more control of the Flint water crisis, Current State's Mark Bashore talks with Dr. Eden Wells, the chief medical executive for the Michigan Department of Health and Human Services.

[Click here](#) to Listen

State, federal and local officials continue working to gain more control of the Flint water crisis.

In recent days, we've heard both good and bad news. Among the good, early tests suggest a drop in lead levels in Flint's water since the switch back to Detroit's water system.

Among the bad, health officials said Friday that the city could see a spike in Legionnaire's Disease when warmer spring weather returns.

Current State's Mark Bashore talks with Dr. Eden Wells, the chief medical executive for the Michigan Department of Health and Human Services.

Child abuse rises 3%; Michigan a leader in child deaths

Detroit Free Press – January 26, 2016, By David Crary, the Associated Press

NEW YORK — The number of U.S. children victimized by abuse and neglect increased by nearly 3% in the latest annual reporting period, according to new federal data.

According to the report released Monday by the the Department of Health and Human Services, the estimated number of victimized children in the 2014 fiscal year was 702,208 — up from 682,307 in 2013.

The report estimated fatalities attributable to child abuse and neglect at 1,580 — up from 1,530 in 2013.

HHS said Rafael Lopez, commissioner of the Administration on Children, Youth and Families, had sought input from child welfare officials in states with the increases in reported abuse and neglect. According to Lopez, the officials cited substance abuse, mental health issues and domestic violence as factors contributing to the increased maltreatment.

DETROIT FREE PRESS

Michigan lawmakers propose registry for child abusers

"We need to shift our focus to the front-end prevention of child abuse and neglect and make sure that families get the help they need when they need it," Lopez said.

States with more than 30% increases in maltreatment over the past five years include Arizona, Kansas, Louisiana, Massachusetts, New Jersey, New Mexico, North Dakota, Oklahoma and Tennessee, according to the report.

DETROIT FREE PRESS

Pentagon: Hundreds of military kids sexually abused

About 70% of the fatalities in 2014 involved children younger than 3, and parents were the perpetrators in 80% of the cases. Georgia, Illinois, West Virginia, Oklahoma and Michigan had the highest rates of child fatalities.

Overall, white children accounted for about 44% of the victims of maltreatment, black children about 21% and Hispanic children about 23%. Smaller percentages were Asian, Native American and mixed race.

Seventy-five percent of the victims suffered neglect, 17% were physically abused and 8.3% were sexually abused. The report tallied 58,105 children who were sexually abused in 2014 — down considerably from the peak of about 150,000 in 1992.

The report, formally known as the National Child Abuse and Neglect Data System, is based on input from child protection agencies in every state.

MDHHS reminds beneficiaries to provide new contact information

Record & Clarion – January 26, 2016

LANSING – Michiganders who receive family planning services through the Plan First! program should call the Michigan Department of Health and Human Services if they have new contact information.

Plan First! recipients should call 877-522-8050 as soon as possible to provide MDHHS with any update in their mailing address and telephone number.

As Plan First! ends, MDHHS will conduct reviews for all recipients to determine eligibility for other Michigan Medicaid programs including the Healthy Michigan Plan.

Anyone who has private health insurance purchased through the Marketplace with Advance Premium Tax Credits and is determined to be eligible for Medicaid coverage may have tax penalties. To avoid these penalties, contact the Marketplace at www.healthcare.gov or call 1-800-318-2596.

Anyone who does not want MDHHS to review their eligibility for Medicaid if they receive Advance Premium Tax Credits can call 877-522-8050 by Feb. 8 to opt out.

Plan First! coverage for individuals will end once MDHHS has made a determination regarding that person's eligibility for Medicaid.

Plan First! was approved by the Centers for Medicare and Medicaid Services in 2006 for family planning services for uninsured women ages 19 to 44 who were not eligible for Medicaid. Since then, the Healthy Michigan Plan launched and expanded health care coverage to approximately 600,000 residents who were previously ineligible for Medicaid, resulting in the decision to terminate Plan First!

Anyone with questions should call 1-877-522-8050 or TTY 1-866-501-5656.

http://www.gladwinmi.com/business/mdhhs-reminds-beneficiaries-to-provide-new-contact-information/article_bfa04d68-c43e-11e5-a7d5-bb5653b1b2ea.html

Hurley pediatric researcher got approval for Flint lead research study in 2 days

Crain's Detroit Business – January 25, 2016, By Jay Greene

It took only two days for the institutional review board at **Hurley Medical Center**, a city-owned hospital in Flint, to approve the research plan presented by Mona Hanna-Attisha, a Hurley pediatrician, to test children she thought might be exposed to lead poisoning through Flint's water supply.

"What we did in that short period of time could only have happened at an institution like Hurley," said Hanna-Attisha, who is also an associate professor at **College of Human Medicine at Michigan State University**. "We are very lean."

An IRB is a committee established by a health care institution to review and approve research involving human subjects. The IRB ensures research complies with all federal, institutional and ethical guidelines.

While Hanna-Attisha already was thinking about whether children in Flint were exposed to lead in their public drinking water supply, she decided to analyze children's blood-lead levels after she read an explosive study in early September conducted by Marc Edwards, the nation's leading lead exposure expert at **Virginia Tech University**, that refuted state tests and pronouncements.

Complete coverage of the Flint water crisis in our special section.

Edwards' Flint Water Study showed that 90 percent of the 277 collected samples from Flint homes showed lead levels that were above 25 parts per billion, far above the 15 ppb danger level.

In his report, Edwards said Flint has "a very serious lead in water problem." Data from his testing show Flint water was 19 times more corrosive than Detroit water. He warned residents not to trust state officials that the water going into their homes was fine.

"Everybody in Flint who drank the water was exposed to lead," Hanna-Attisha said. "There are 8,000 to 9,000 children in Flint of a population of 100,000. I wanted to know if kids were getting lead and how much."

Lead mostly affects unborn children and those ages 6 or younger whose brains are still being formed. Research shows lead causes irreversible brain damage, developmental delays, speech problems, rashes, a boosted risk for behavioral issues and other serious chronic conditions.

"Within two hours after contacting (Hurley's) chief medical officer (Michael Jaggi, D.O.), we got the data we needed," she said.

Crucial to the data collection, Hanna-Attisha said, was Hurley's electronic medical record system. The EMR had data on blood samples of dozens of children in Flint.

"IRB approval normally takes a month. But our institution is a public hospital with a mission to serve people. Everybody acted quickly. The whole research project was completed in two weeks. At other institutions, nobody would have funded it. This was pure altruism out of our duty to protect the community," she said.

At a Sept. 24 news conference, Hanna-Attisha and other doctors presented the findings.

Her study showed the percentage of children 6 years old and younger with more than 5 micrograms per deciliter of lead in their blood increased from 2.1 percent when Flint purchased Lake Huron water from the Detroit water system to 4 percent after the switch to Flint River water.

Some children in certain ZIP codes were being exposed to triple the average lead levels from the water, jumping from 2.5 percent of the children tested to 6.3 percent.

Hanna-Attisha, who is also lead with the **MSU/Hurley Pediatric Public Health Initiative**, said her study was immediately criticized by state officials, with references that it was creating hysteria and that it was part of a political witch hunt to blame the Snyder administration. But Hanna-Attisha got key backing from key supporters including Melany Gavulic, R.N., Hurley's CEO; Lawrence Reynolds, M.D., CEO of **Mott Children's Health Center**; the **Genesee County Medical Society**, and State Sen. Jim Ananich of Flint.

Within a week, however, several state employees, led by Eden Wells, M.D., the chief medical executive with the **Michigan Department of Health and Human Services**, and several state epidemiologists were agreeing with Hanna-Attisha.

"We were able to show our data was consistent with hers," said Wells, who is also a clinical associate professor of epidemiology at the **University of Michigan School of Public Health**.

Wells said Hanna-Attisha and the Flint physician network helped galvanize support within the medical community to get the message out about how lead in Flint's water supply was affecting children.

"I am proud of what Mona and our organization did," said Kirk Smith, CEO of the **Flint Area Health Coalition**, who also supported the study from Day One. Hurley, the health coalition and the medical society "demanded action from the city and the county. It was a public health threat."

Subject: Flint Drinking Water Lawsuits - Mays v Snyder

Matt,

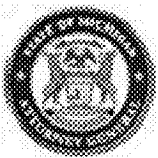

As a follow-up to our earlier telephone conference, we would like to set up a meeting to discuss the process of gathering hard and electronic copies of potentially relevant documents for the Mays v Snyder lawsuits involving DHHS and Dr. Wells. Do you have any time tomorrow morning to meet with us? I'd also like to invite the DTMB contacts for DHHS, whom will have a substantial role in assisting us in preserving and gathering electronic documents. I believe those contacts are Linda Pung (DTMB GM for DHHS) and Susan Nordyke (DTMB BRM for DHHS). If I have identified the incorrect people from DTMB, please let me know.

Michigan requests additional medical services for Flint

FOX 2 – January 26, 2016

The state of Michigan is requesting additional medical services for all Flint residents under the age of 21.

Governor Rick Snyder announced the request on Tuesday, which would allow all Flint residents under 21 to receive additional healthcare to address potential problems brought on by exposure to lead.

The request will include:

- Expanded Medicaid eligibility for all residents in the impacted areas up to age 21, regardless of income level. The request would also include the expansion of Medicaid coverage for people already enrolled in other forms of insurance to ensure comprehensive benefits are available to children who may have come into contact with lead in the water.
- Additional, community-based resources to ensure all children, regardless of health insurance coverage, have access to comprehensive medical treatment. This will include physical and behavioral health treatment in addition to long-term health care services.
- Federal Medicaid match for lead abatement activities in impacted areas. Because of the number of children enrolled in Medicaid in the impacted area, lead-abatement programs would help minimize and/or prevent any long term adverse health problems associated with lead exposure.

The request has not yet been submitted to the Michigan Department of Health and Human Services or The U.S. Department of Health and Human Services but it will be soon.

Flint hires professor who helped bring water crisis to light

ABC 13 – January 27, 2016

FLINT, Mich. (AP) - The Latest on Flint's water crisis and efforts to fix the problem of lead in the drinking water (all times local):

12:05 p.m.

Flint Mayor Karen Weaver says she has hired a Virginia Tech professor whose extensive testing helped bring the city's lead-tainted water problems to light.

Weaver said at a news conference Wednesday that Marc Edwards will oversee all water testing done by the state and federal governments. She added he will be "fully independent," report to her and get paid through private donations. She also touched on the issue of Flint residents' water bills. Supplemental funding approved by the state House last week included \$3 million to help residents pay their bills.

Gov. Rick Snyder says Edwards and Weaver are part of a 17-member group of medical experts selected to determine long-term solutions to fix Flint's water system and help residents who have been exposed to lead.

Snyder also announced that the state would have an increased administrative presence in Flint and called it the beginning of a long-term effort.

9:20 a.m.

Michigan Gov. Rick Snyder and Flint Mayor Karen Weaver have scheduled a news conference to address the actions the Michigan city has taken and the next steps it will take to deal with a public health emergency caused by lead-tainted water.

The state's website says the news conference will be at 11 a.m. Wednesday.

Others expected at the news conference are Michigan State Police Capt. Chris Kelenske, Department of Environmental Quality Interim Director Keith Creagh and Department of Health and Human Services Director Nick Lyon.

9 a.m.

Michigan Gov. Rick Snyder has named a group of medical and field experts to a committee that will determine long-term solutions to fix Flint's water system and help residents who have been exposed to lead.

In a news release issued Wednesday, the governor says the 17-member committee will make recommendations regarding the health of people exposed to lead, study Flint's water infrastructure and determine potential upgrades, and establish ways to improve communication between local and state government.

The committee includes Flint Mayor Karen Weaver, Virginia Tech professor Marc Edwards, who has extensively studied the issue in Flint and elsewhere, and Dr. Mona Hanna-Attisha, who is credited with bringing the problem to the public's attention after state agencies initially dismissed her concerns.

Members will serve three-year terms expiring Dec. 31, 2018.

8 a.m.

A new lawsuit asks a federal judge to force Michigan and the city of Flint to replace all lead pipes in Flint's water system to ensure residents have a safe drinking supply.

The complaint, filed Wednesday, says service lines from water mains into homes should be replaced at no cost to customers. The suit seeks an order requiring city and state officials to remedy alleged violations of the federal Safe Drinking Water Act.

It's at least the fourth lawsuit filed over Flint's lead-tainted water. The others seek financial damages and class-action status.

The plaintiffs are the Natural Resources Defense Council, American Civil Liberties Union of Michigan, Concerned Pastors for Social Action and resident Melissa Mays.

This item has been corrected to reflect the proper name of the Natural Resources Defense Council.

Snyder to seek aid for Flint children exposed to lead

Detroit Free Press – January 26, 2016, By Matthew Dolan and Todd Spangler

Michigan governor seeks to expand Medicaid to help at-risk young people exposed to lead in Flint during water crisis

Gov. Rick Snyder said Tuesday he will seek permission from the Obama administration to allow all young people in Flint the chance to receive publicly funded health care services for lead exposure amid the city's contaminated drinking water crisis.

"We're focused on protecting the health and welfare of Flint residents, especially children and young adults who might have been exposed to lead," Snyder said in a news release. "We want to make sure comprehensive medical care services are available, and we hope the federal government will partner in our efforts."

The White House and federal Department of Health and Human Services did not have an immediate response Tuesday to Snyder's initiative targeting Flint residents up to age 21 through the expansion of Medicaid.

DETROIT FREE PRESS

Riley: Rachel Maddow wants focus back on Flint residents

Specifically, the initiative, which is expected to be sent to the Obama administration in the next week, seeks expanding Medicaid eligibility to those affected regardless of income level. The request would also include the expansion of Medicaid coverage for people already enrolled in other forms of insurance.

The idea, state officials said, is to spread comprehensive benefits to children who may have come into contact with lead in the water regardless of their ability to pay. Generally, lead affects children more than it does adults. Children tend to show signs of severe lead toxicity at lower levels than adults, according to the federal Centers for Disease Control.

In addition, the state would ask for additional resources to bolster community-based services to address behavioral issues arising from lead exposure. Finally, additional resources would be poured into removing lead from Flint homes through an expanded Medicaid match program.

Before the governor's announcement, in an interview with Free Press reporters, one of the leading public health advocates in Flint said that the state and federal government had set aside little up until now to pay for new efforts to treat young people who have been exposed to lead.

"Everything has gone for infrastructure and water," Dr. Mona Hanna-Attisha, head of the pediatric residents program at the city-owned Hurley Medical Center and pediatrics and human development professor at the Michigan State University College of Human Medicine, said in a conference call Tuesday afternoon. "Those are Band-Aids. Those are today problems."

DETROIT FREE PRESS

Madonna joins the call to help Flint residents

She added that the total cost of treating the community exposed to lead could be a crisis needing billions of dollars to address and take years to complete.

Earlier this month, a group of concerned community members in Flint, including Hanna-Attisha, created a charitable fund seeking donations to support Flint's children exposed to lead. The fund is designed to supplement the ongoing pursuit of additional state and federal funding, backers had said.

Earlier this month, Hanna-Attisha estimated between 8,000 and 9,000 children under the age of 6 years living in Flint may have been exposed. State officials said that 25,000 children in Genesee County currently receive Medicaid. It was unclear Tuesday how many young people may receive new or expanded services as a result of the governor's request.

State officials also said they were unsure of the total cost, some of which would be borne by the state and some of which would be assumed by the federal government.

Flint stopped buying water from the Detroit Water and Sewerage Department in April 2014 and began using the Flint River after Flint decided to join the Karegnondi Water Authority in a move considered more cost-effective for the financially ailing city. It needed an interim water source because construction on the water authority project will not be complete until later this year.

After failing to answer alarm bells sounded by outraged citizens who complained of discolored and foul-smelling tap water and scoffing at reports of a spike in blood-lead levels in Flint children, Michigan acknowledged a problem in early October and helped Flint reconnect to the Detroit system. But officials say a danger persists because of damage to the water-distribution system by the corrosive Flint River water and said that residents still shouldn't drink the tap water without using a lead filter.

Snyder declared a state of emergency Jan. 5 and mobilized the Michigan National Guard to help with water and filter distribution on Jan. 12. On Jan. 16, President Barack Obama declared a federal state of emergency in Flint but an emergency declaration seldom brings more than about \$5 million in short-term aid. Obama also announced \$80 million in financial aid for water infrastructure projects in Michigan — but it's not clear how much of that will go to help Flint.

Several other federal agencies are on the ground in Flint and Hanna-Attisha said the Obama administration's point-person in the city, Dr. Nicole Lurie of the U.S. Department of Health and Human Services, seems to understand the need for long-term intervention for affected children and others. But the question of federal financial resources to support that remains.

The state Department of Environmental Quality admitted that it failed to require corrosion-control chemicals in the water after the switch in sources. Many also blame local officials and federal environmental experts for their roles in the poorly treated water. The city was under the control of a state-appointed emergency manager at the time.

The Legislature has already approved \$9.35 million for Flint for the current 2016 fiscal year and a further 2016 appropriation of \$28 million has passed the House and is awaiting action in the Senate this week.

The \$28-million supplemental appropriation bill for 2015-16 is expected to be revised Wednesday in the Senate Appropriations Committee before moving on to the full Senate. Senators have said that because of the massive surge of donations of bottled water to Flint, some of the money could be targeted away from water toward other needs.

Currently, the bill allocates \$500,000 to study Flint's water infrastructure and \$2 million for water system needs, which could include new infrastructure.

Officials say Flint has about 500 miles of old iron pipe and thousands of lead service lines, none of which have been replaced since the state acknowledged a public health crisis around Oct. 1.

Since January 9, state-led water resource teams have helped deliver 176,118 cases of bottled water, 93,048 filters, 198,552 filter cartridges and 29,320 water testing kits, according to state officials on Tuesday.

There are more than a half-dozen federal agencies active in responding to the Flint crisis, including FEMA and the DHHS, with a large part of that effort dedicated to supplying residents with fresh water and providing technical assistance and resources to ensure that residents, especially children, have their blood-lead levels tested. Agencies are also looking at what resources can be made available to continue to monitor exposed children.

Dedicated funding for long-term infrastructure repairs, however, has not been made available, since emergency declarations like the one signed for Flint are generally limited to \$5 million and even individual assistance is rare under that process.

The federal HHS says the Centers for Disease Control is providing technical assistance to assess lead exposure, especially in homes with children, and that HHS is working with the Centers for Medicare and Medicaid Services to locate vulnerable residents who may need help getting bottled water and filters.

HHS also said that Medicaid regularly requires Medicaid-eligible children up to age 6 be tested for lead poisoning and that treatment is covered under Medicaid as are home investigations. HHS says the state can expedite enrollment into Medicaid for eligible children in need of immediate medical attention.

Less than a week after issuing an emergency order that it would take over water sampling in Flint, the U.S. Environmental Protection Agency issued an update on Tuesday saying it expects to begin several rounds of sampling to confirm that filters distributed to residents are effective in removing lead and to better understand the types of service lines prevalent in the city. The EPA also said it would take samples to "ensure corrosion control is being restored in the drinking water system."

Last week, the agency complained that the city of Flint and state DEQ weren't enacting recommendations for improving city water quickly enough.

Suit: Safe Drinking Water Act violated in Flint

The Detroit News – January 27, 2016, By Jennifer Chambers and Jacob Carah

Flint — Arguing the water in Flint is still not safe to drink because state and city officials are violating the Safe Drinking Water Act, a coalition of religious, environmental and civil rights activists is asking a federal judge for help.

The group, led by the Natural Resources Defense Council, the ACLU of Michigan, Concerned Pastors for Social Action and Flint resident Melissa Mays, filed a lawsuit early Wednesday in U.S. District Court in Detroit alleging government officials continue to violate the federal law that protects drinking water amid Flint's widespread lead-contamination crisis.

The 59-page lawsuit says the harm suffered by Flint residents will not be addressed until city and state officials properly treat Flint's water to control lead, properly test the water for lead contamination, promptly notify residents of testing results, and report their activities to state regulators, all as required by the Safe Drinking Water Act.

"The damage done to the city's pipes from the Flint River water means that lead will continue to contaminate the city's drinking water. This contamination poses an ongoing health risk to city residents, especially young children who are most vulnerable to the effects of lead," the lawsuit.

The suit names as defendants state Treasurer Nick A. Khouri, the five-member Flint Receivership Transition Advisory Board, Flint city administrator Natasha Henderson and the city of Flint.

According to the complaint, Khouri oversees and manages the city's operations while it remains under state control, the advisory board must approve city contracts and budget amendments including those related to operations of the water system and Henderson and the city are operators of the water system under federal law.

It is also asking the court to order state officials to completely replace all lead service lines in the water system at no cost to customers, including privately owned lines.

"The water in Flint is still not safe to drink because city and state officials are violating the federal law that protects drinking water," said Dimple Chaudhary, senior attorney with the Natural Resources Defense Council. "In doing so, they are exposing the people of Flint to lead, a powerful toxin that can be devastating to young children. We are asking a federal court to step in because the people of Flint simply cannot rely on the same government agencies that oversaw the destruction of its infrastructure and contamination of its water to address this crisis."

The suit says members of Concerned Pastors for Social Action and Flint residents want to use unfiltered tap water they purchase from the water system rather than having to spend additional money and the inconvenience of using bottles water or installing filters.

"These filters can, if not used, changed and maintained regularly and properly, stop working or even make lead problems worse," the complaint says.

The group, including the Rev. Jesse Jackson, discussed the lawsuit at a press conference Wednesday morning at a Flint church.

"Justice looks like those who engaged in criminal negligence will face the law for those who made the decision to cover it up. On the other hand, justice for the people will require a substantial investment in not just bottles of water but for the water pipes," Jackson said. "This is an epicenter of urban crisis, that reflects a candor of right wing reaction to the civil rights struggle of the last 50 years."

Bishop Neal Roberson, senior pastor of the Church of the Harvest in Flint, added the endgame for justice is for arrests to be made.

"It has been said, Flint, Michigan, is a crime scene and that someone needs to go to jail for what has happened here," Roberson said. "There are sick children; there are families hurting."

This latest lawsuit follows at least three others, which have been filed by Flint residents as part of the water crisis in recent days and months.

They include: a federal civil suit filed against Gov. Rick Snyder and others seeking class action status and money damages for the crisis; a lawsuit against Flint and others filed in Genesee County to stop water shutoffs for nonpayment, also seeking class action status; and a lawsuit filed in the Michigan Court of Claims against Snyder and the state departments

of environmental quality and health and human services that seeks to hold the state of Michigan financially accountable for the disaster.

On Thursday, the nation's top environmental official cited her agency's authority under the Safe Drinking Water Act and ordered Michigan to take "immediate action to address serious and ongoing concerns" with Flint's drinking water system.

EPA Administrator Gina McCarthy issued an emergency order that requires "necessary information" be provided to the public in a clear and transparent way to assure that "accurate, reliable and trustworthy information" is available to inform the public and decisions about next steps.

The order includes:

- Full implementation of EPA task force recommendations on sampling, with prompt and regular reporting to the federal agency and the public.
- Ensuring Flint has all of the professional assistance necessary to operate its water system safely.
- Soliciting, through a transparent public process, the input of "nationally recognized experts" on safe water treatment, sampling and distribution.
- Ensuring the city has the "technical, managerial and financial capacity" to safely transition from its current water source, the Detroit Water and Sewerage Department, to the newly formed Karegnondi Water Authority some time later this year.

Flint's water crisis stems from the city's switch to Flint River water in April 2014 while under control of a Snyder-appointed emergency manager. In October, after health officials confirmed elevated levels of lead in the bloodstreams of Flint children, the city switched back to Detroit's Lake Huron water system.

Lead can cause irreversible brain and developmental damage in children and infants who ingest it through water or lead-based paint. Health officials said its impacts can take years to manifest and require heightened monitoring to identify.

Flint crisis researchers named to state response team

The Detroit News – January 27, 2016, By Jonathan Oosting

Lansing – Michigan Gov. Rick Snyder on Wednesday appointed two researchers who helped expose the Flint drinking water contamination crisis to a committee tasked with identifying long-term solutions.

Virginia Tech professor Marc Edwards and Dr. Mona Hanna-Attisha of Hurley Medical Center are among a group of medical and field experts who will serve on the 17-member Flint Water Interagency Coordinating Committee, the governor announced.

"Flint residents deserve clean, safe drinking water, and I am confident that the expertise represented on this committee will be a tremendous asset as we continue to address the water crisis in Flint," Snyder said in a statement. "I am grateful to these appointees for their willingness to serve on this important committee."

Edwards, who led an independent and volunteer Flint research team from Virginia Tech, first exposed elevated blood lead levels in drinking water following the city's switch to local river water. Hanna-Attisha later identified elevated blood lead levels in the blood of infants and children.

The state had initially dismissed their conclusions, but officials confirmed the independent findings on Oct. 1, prompting an ongoing response. The governor, in his recent [State of the State address](#), thanked Edwards and Hanna-Attisha for sounding the alarm as far back as May.

“Tragically, based on what DEQ and the Department of Health and Human Services had seen on the ground, they initially failed to reach the same conclusion,” Snyder said in his Jan. 19 speech. “I want to thank the professor, the doctor and the concerned pastors of Flint for bringing this issue to light. We are actively investigating why these agencies got it so wrong.”

Flint Mayor Karen Weaver also will serve on the new inter-agency coordinating committee, which Snyder created by executive order on Jan. 11, along with heads of various state agencies, including Department of Environmental Quality Director Keith Creagh, Health and Human Services Director Nick Lyon and Treasurer Nick Khouri.

The governor also appointed Genesee County Board Chairman Jamie Curtis, City Administrator Natasha Henderson, retired Saginaw County Drain Commissioner Jim Koski, Mott Children’s Health Center CEO Lawrence Reynolds, Kettering University professor of mechanical engineering Laura Sullivan and Genesee County Health Department officer Mark Valacak.

One other member will be named at a later date. The committee has been charged with a variety of responsibilities, including recommendations for acceptable drinking water standards and recommendations regarding the health impact on Flint residents.

A separate Flint Water Advisory Task Force, in a letter sent to the governor last week, had suggested he establish a group of subject matter experts, including Edwards, to oversee the city’s conversion to a new regional pipeline from Lake Huron. The full task force report is expected in February.

If Flint water is unsafe, what about yours?

Great Lakes Echo – January 27, 2016, by Jasmine Watts, Capital News Service

LANSING – While Flint struggles with lead in its water, other aging Michigan communities also have water lines made of the health-threatening metal.

The National Drinking Water Advisory Council said in 2014 that there is no safe level of lead. It’s a costly problem to address.

An American Water Works Association report, “Buried No Longer,” said the nation needs to replace aging pipelines that may contain lead or may leak. Over a 25-year span, “Buried No Longer” estimates that the country’s new drinking infrastructure will cost \$1 trillion.

According to the report, the total replacement cost of water pipes in the Midwest would be about \$486 billion. Public Sector Consultants is analyzing Michigan’s infrastructure to find costs and needs related to fixing or replacing wastewater and drinking water systems. The Lansing-based research and program management firm specializes in governance and regulation, health care, education, energy and environmental policy.

“Although the report is still being drafted and we can’t release the results, part of our analysis is looking at the flaws in the EPA survey about drinking water,” said Jon Beard, a consultant at Public Sector Consultants.

Beard says that there have been far too many underreported cases of decrepit pipelines that lead to underestimating the problem. The assessment of need in the EPA survey is for 20 years from the time of the survey, which also causes discrepancies.

Homes with plumbing systems built before 1978 have copper and cast iron pipe connections. The American Water Works Association report says that these pipes can contain lead.

“If there is lead within one source in the home, there is probably lead in other sources,” said Angela Minicuci, public information officer for the Department of Community Health and Human Services. “Lead poisoning has been a problem and will always be a problem until we get all lead risks out of homes.”

Minicuci recommends that people who live in homes built before 1978 get tested for lead poisoning because of lead in pipelines and in paint.

The Centers for Disease Control and Prevention says there is no safe blood level of lead and that even low levels have been shown to have an effect, especially among children.

Lead poisoning can affect mental and physical development and at very high levels can be fatal.

Grant helps Robinson Elementary School focus on health and wellness

Grand Haven Tribune – January 27, 2016, By Krystle Wagner

ROBINSON TWP. — The staff and students at Robinson Elementary School are putting a bigger focus on healthy habits and physical activity with the help of a state grant.

Robinson Elementary is one of 117 Michigan schools awarded the Building Healthy Communities grant.

The grant offers two carts of equipment — basketballs, hula hoops, cones and more — for outdoor recess and gym class. It also comes with a nutritional curriculum component, said Sheri Koetsier, a math interventionist and a Robinson Elementary School parent.

Koetsier and Laura Thompson, a physical education teacher, wrote to request the opportunity for the school to receive the grant because of what students stand to gain from the program.

Robinson Elementary Principal Jeff Marcus said the program is an extension of the Fuel Up to Play 60 program, which the school has had for the past 3-4 years.

While it’s the school job to help students academically, Marcus said they want to support the whole child through helping them develop physical activity and healthy eating habits.

“We have (physical education) classes 60 minutes a week, but it’s certainly not enough,” he said.

Since the statewide health and wellness program started in 2009, more than 180,000 students in more than 390 Michigan schools have been reached, according to a press release. The elementary program partners are Blue Cross Blue Shield of Michigan, Michigan Department of Health and Human Services, Michigan Fitness Foundation, United Dairy Industry of Michigan, and Wayne State University.

Although technology devices are “tremendous assets” for students academically and intellectually, Marcus said they are seeing children having less physical activity because they can be entertained without needing it.

The school's Fuel Up to Play 60 team helps students get involved in Zumba during afternoon recess, and it also helps them partner with the Grand Haven High School football team to teach the younger kids how to catch and throw, Thompson said.

The school has also received a Fuel Up to Play 60 grant to buy snowshoes, which can be used in gym or other classes.

In receiving the additional equipment, Thompson said it has helped students be more active during recess and develop more teamwork skills. It has also given students access to more equipment.

Students provide a nutritional tip of the day during the morning announcements.

Andrea Lape, a registered dietitian and healthy schools coordinator, visits Robinson Elementary School to work with students about nutritional lessons. She said they've worked on "my plate model," which explains what a plate should include in each meal. In next month's lesson, students will look at protein and healthy snacks.

Lape said she feels like the students are embracing the messages they're learning.

Staff members are also getting on board with the health and wellness efforts. Thompson said many teachers have stepped up to make a difference and help reinforce the healthy lessons through leading by example.

Thompson said she hopes they're developing a school environment in which the mindset is to promote healthy choices and influencing students to see the importance of exercising and continue those choices throughout their lives.

Through the programs, Marcus said he's seeing students being more open to trying new things when healthy snacks are introduced. When it comes to classroom parties and treats, Marcus said he's also noticed healthier options such as carrots and cheese.

At the end of the year, they will look at the program to better assess the impact it's having on students.

"I'm starting to see a difference," Marcus said.

Recall warning on salads issued after death

Hillsdale – January 27, 2016, By Don Reid

LANSING — The Michigan Department of Health and Human Services has been collaborating with the Centers for Disease Control and Prevention, the Michigan Department of Agriculture and Rural Development, and local health departments on a multistate foodborne outbreak of Listeriosis.

The Branch-Hillsdale-St. Joseph Counties Community Health Agency said the CDC is recommending that consumers do not eat packaged salads produced at the Dole processing facility in Springfield, OH. These packaged salads can be identified by the letter "A" at the beginning of the manufacturing code found on the package.

The outbreak of Listeriosis, a serious bacterial infection, which resulted in one Michigan death and a dozen serious illnesses around the region in six states has brought a warning.

The CDC is recommending that consumers do not eat, restaurants do not serve, and retailers do not sell packaged salads produced at the Dole processing facility in Springfield, OH.

These packaged salads, which were distributed in Michigan, were sold under various brand names including:

Dole, Fresh Selections, Simple Truth, Marketside, The Little Salad Bar, and President's Choice.

At this time, there is no evidence to suggest that packaged salads produced at other Dole processing facilities in the United States are linked to illness. Listeriosis causes fever and muscle aches, often preceded by diarrhea or other gastrointestinal symptoms

The illnesses started in July but the source was not known until January 2016 when the laboratory results from packaged salad collected at a Dole processing facility in Springfield, Ohio, was linked to the illnesses. Laboratory tests showed that the strain of Listeriosis found in the plant was similar to that found in those ill.

Listeria can cause a serious, life-threatening illness. Symptoms of listeriosis include: high fever, severe headache, neck stiffness, muscle aches, and nausea, sometimes diarrhea or other gastrointestinal symptoms.

The disease primarily affects pregnant women, newborn babies, older adults, and adults with weakened immune systems. Pregnant women may experience a milder illness with fever and non-specific symptoms, such as fatigue, headache, and aches; however, infections in pregnant women can lead to miscarriage, stillbirth, premature delivery, or a life-threatening infection in the newborn.

The incubation period can range from two to three days after exposure, to as long as 70 days. People experiencing these symptoms, and who may have consumed this packaged salad product should seek immediate medical attention.

Dole packaged salad linked to listeriosis outbreak in multiple states, including Michigan

Holland Sentinel – January 26, 2016

A multistate outbreak of listeriosis from packaged salad has infected four people in Michigan and killed one person from Macomb County.

Holland, Mich.

A multistate outbreak of listeriosis from packaged salad has infected four people in Michigan and killed one person from Macomb County.

According to the Michigan Department of Health and Human Services, 12 people in six states have been infected with the outbreak strain of *Listeria monocytogenes* since July 5. All of the cases reported were hospitalized.

In January, a packaged salad collected at a Dole processing facility in Springfield, Ohio, was linked to the illnesses. The Centers for Disease Control and Prevention recommends that consumers do not eat, restaurants do not serve and retailers do not sell packaged salads produced at the Dole processing facility in Springfield, Ohio

The company is withdrawing all packaged salads currently on the market that were produced at this facility. These packaged salads were sold under various brand names, including Dole, Fresh Selections, Simple Truth, Marketside, The Little Salad Bar and President's Choice. These packaged salads can be identified by the letter "A" at the beginning of the manufacturing code found on the package.

At this time, there is no evidence to suggest that packaged salads produced at other Dole processing facilities in the United States are linked to illness.

Listeria can cause a serious, life-threatening illness. Symptoms of listeriosis include high fever, severe headache, neck stiffness, muscle aches and nausea, sometimes diarrhea or other gastrointestinal symptoms. The disease primarily affects pregnant women, newborn babies, older adults and adults with weakened immune systems. The incubation period is typically between 2 and 3 weeks, but can be as long as 70 days. People experiencing these symptoms and who may have consumed this packaged salad product should seek immediate medical attention.

For more information about the investigation, visit cdc.gov/listeria/outbreaks/bagged-salads-01-16/index.html.

Snyder deploys top aide to work on Flint water response

The Detroit News – January 27, 2016, By Jonathan Oosting

Gov. Rick Snyder said Wednesday he is deploying a top aide to work in Flint and enlisting outside experts to study water quality in hopes of restoring access to safe tap water in the beleaguered city.

Transformation Manager Rich Baird, a Flint native, will work out of an office in the city and Lt. Gov. Brian Calley will also be a regular presence, Snyder announced in a joint press conference with Flint Mayor Karen Weaver and state officials in Flint. Baird helped recruit Jones Day bankruptcy lawyer Kevyn Orr to become Detroit's emergency manager and helped the city navigate the country's largest municipal bankruptcy in history.

"You'll find many other departments bringing resources to bear on the ground here to help the people of Flint," Snyder said. "...We're going to keep doing more, and we're going to keep committed to the city of Flint."

The state continues to advise residents against drinking unfiltered tap water due to elevated lead levels, but Department of Environmental Quality Interim Director Keith Creagh said recent testing has shown some signs of improvement.

In the near term, the state will continue to focus on recoating service pipes to control lead leaching. Some parts of the city do not have lead service lines, said Creagh, who added that targeted water testing may soon allow officials to clear some neighborhoods for tap water use.

"We're not going to guess. We're going to assure that people in this city get clean, safe drinking water," he said, noting that an "all clear" will not be given until there is a consensus between government and independent researchers. "That's our commitment, is to put together a methodical, defensible and reasonable or rational plan."

Both the state and city have enlisted the services of Marc Edwards, the Virginia Tech professor who first exposed elevated lead levels in the water last year. Snyder on Wednesday [appointed Edwards](#) to the Flint Water Interagency

Coordinating Committee, which will include Dr. Mona Hanna-Attisha, the Hurley Medical Center pediatrician who first found elevated lead levels in the blood of children.

Weaver said the city has retained Edwards to oversee all state and federal water testing. He will be paid from private dollars, she said.

The Michigan Senate could vote as early as Thursday on \$28 million in supplemental funding for Flint, as requested by Snyder. Weaver noted the plan includes \$3 million to help the city offset losses from customers who are behind on their water bills. Resident should not have to pay for water they cannot drink, she said.

"I'm glad governor said this is a first step," Weaver said. "I'm asking for a staircase. We need more, we want more."

Snyder said it is not yet clear how many underground lead service lines may need to be replaced in the city, and he declined to discuss a new lawsuit demanding the state pick up the tab for full replacement.

The more pressing issue, the governor said, is determining whether efforts to recoat existing pipes with proper corrosion controls will produce safer drinking water, now being pulled from Detroit's system while construction continues on a regional pipeline to Lake Huron.

"Let's take care of the people of Flint, both short-term making sure they have the bottled water and filters and everything else they need, and then, how do we get good water coming out of the tap, and then how do we rebuild the community?" Snyder said.

The state is also asking the federal government to expand Medicaid health care eligibility to cover all Flint-area residents up to 21 years of age and provide Medicaid match dollars for lead abatement activities.

The federal assistance could help the state stretch its resources as it looks to provide wrap-around services for Flint residents exposed to lead and ensure access to nutritional foods that can reduce the effects, said Department of Health and Human Services Director Nick Lyon.

"We know that lead can have impacts for years to come, and we're working with our local partners here at the Genesee Health System and the Genesee County Health Department to determine what tracks, what activities and what services need to be provided to ensure that children get the best chance they have at being successful," Lyon said.

Snyder continues to face criticism for an initially slow response to the Flint water crisis and some subsequent steps, including the recent hiring of two public relations firms that he is paying through an outside tax-exempt, nonprofit fund.

The governor defended the hires on Wednesday, saying there is a lot of misinformation being spread about the Flint water crisis.

"Communications is a huge issue in this," he said. "It's not about spinning anything. It's about getting the facts out there."

The state, which failed to ensure that proper corrosion controls were added to Flint water after the city switch to a local river source in April of 2014, has been ramping up relief efforts since confirming elevated lead levels on Oct. 1.

Snyder declared a state of emergency in Flint on Jan. 5 and then activated the Michigan National Guard, which has been assisting with water distribution efforts.

Water response teams have distributed 186,309 cases of water, 94,301 filters and 29,841 test kits since Jan. 9, the state's joint information center said Tuesday.

Nearly 330,000 Michigan residents signed up for coverage through HealthCare.gov

The Oakland Press – January 27, 2016, By Jenny Kalish

With just a few days left before the final deadline, about 8.9 million people have signed up for health coverage or renewed previous coverage through [HealthCare.gov](http://www.healthcare.gov).

About 329,017 of those consumers are in Michigan, the U.S. Department of Health & Human Services reported.

“The clock is ticking with just four days left before January 31, the final enrollment deadline for 2016 health coverage,” said U.S. Secretary for Health and Human Services, Sylvia Burwell, in a statement. “We are focused on making sure people know that financial help is available, the deadline is fast approaching and that we’re here to help them enroll – so that they don’t risk having to pay a penalty of \$695 or more for not having health insurance.”

Of the nearly 330,000 people in Michigan who enrolled or renewed previous coverage, approximately 170,893 are located in the metro Detroit area, the report said.

If you have questions about signing up or want to talk through your options with a trained professional, call 1-800-318-2596 or go to www.healthcare.gov. To find local help in person, go to Localhelp.healthcare.gov.

Michigan governor appoints Flint whistleblowers to remedy water crisis

The Washington Post – January 27, 2016, By Lenny Bernstein

Michigan Gov. Rick Snyder named a panel of experts Wednesday to help solve the city of Flint's water crisis, including some of the very critics who forced local, state and federal governments to acknowledge dangerous levels of lead in the drinking water there.

Flint Mayor Karen Weaver also announced at a news conference with Snyder in Flint that she had hired Marc Edwards, the Virginia Tech professor who exposed the degree of Flint's contamination, to oversee all water testing done by the state and federal governments. He will report to her as an independent consultant and be paid through private donations.

Edwards will serve on Snyder's 17-person panel, along with Mona Hanna-Attisha, the pediatrician who confirmed a sharp increase in the number of children showing elevated levels of lead in their bloodstreams after the city switched its water supply to the Flint River in April 2014.

[Flint water crisis reveals failure of government at all levels]

The Flint Water Interagency Coordinating Committee, which also includes the mayor, will make recommendations about the health and welfare of people exposed to lead and suggest ways to upgrade the city's aging water system.

The steps announced Wednesday appear intended in part to help Snyder, the state and other officials regain the trust of the city's 100,000 residents, who are still unable to drink from their taps. The governor again took responsibility for the failure to protect Flint households from lead, which leached into the water supply from aging pipes when the city switched to the more corrosive river water and the state neglected to add protective chemicals.

"I am responsible for that, and I take responsibility," Snyder said, echoing the words of his State of the State address last week.

[Flint could have saved money without switching to corrosive river water, some say]

Separately Wednesday, a coalition of environmental groups asked a federal judge to order quick replacement of all the lead pipes in the city's water system. Snyder said at the news conference that officials are trying to figure out where those pipes are so that action can be taken.

His administration has estimated that replacing as many as 15,000 damaged lead service lines could cost as much as \$55 million.

Keith Creagh, director of the state Department of Environmental Quality, said the state was continuing to sample Flint water for lead and that "things are trending better." Of 2,577 samples analyzed, 93.7 percent had less than 15 parts per billion of lead and 85 percent had less than 5 parts per billion.

The federal Environmental Protection Agency recommends that homeowners and municipalities move to reduce any lead level higher than 15 parts per billion, but some health researchers say there actually may be no safe level for lead in drinking water.

The state has asked the federal government to expand Medicaid so that blood tests for lead poisoning will be covered for all Flint children under 21. Nick Lyon, director of the state Department of Health and Human Services, promised long-term treatment and monitoring because "we know lead can have impacts for years to come."

<https://www.washingtonpost.com/news/to-your-health/wp/2016/01/27/michigan-governor-appoints-critics-to-remedy-flints-water-crisis/>

Snyder: About 200 Flint kids have elevated blood-lead levels

The Sacramento Bee – January 27, 2016

FLINT, Mich.

The latest on Flint's water crisis and efforts to fix the problem of lead in the drinking water (all times local):

6:15 p.m.

Gov. Rick Snyder says officials have identified about 200 Flint children with elevated blood-lead levels since the city's water crisis was exposed in the fall.

Snyder disclosed the figure during a tele-town hall event Wednesday with nearly 8,000 listeners. He says the state is working to ensure all kids are tested.

Michigan officials had said earlier Wednesday that water samples in Flint are "trending better," but that it's too soon to give the go-ahead to residents to resume drinking unfiltered water.

Department of Environmental Quality Interim Director Keith Creagh said the test results are not statistically valid because there's no guarantee homeowner-provided samples are coming from homes at higher risk. Further testing continues.

5:35 p.m.

Michigan Gov. Rick Snyder has convened the first meeting of a panel that will work on finding solutions for Flint residents whose drinking water is contaminated with lead, something he calls a "terrible tragedy."

The Flint Water Interagency Coordinating Committee is a 17-member panel that will make recommendations regarding the health of people exposed to lead, study Flint's water infrastructure, and establish ways to improve communication between local and state government.

Snyder told committee members it presents an opportunity to "leverage the resources" each brings.

The committee includes Flint Mayor Karen Weaver, Virginia Tech professor Marc Edwards, who has extensively studied the issue in Flint and elsewhere, and Dr. Mona Hanna-Attisha, who is credited with bringing the problem to the public's attention after state agencies initially dismissed her concerns.

3:45 p.m.

Senate Democratic Whip Richard Durbin of Illinois says Democrats will offer an amendment to a bill on the Senate floor to address the water crisis in Flint, Michigan.

Durbin says Democratic Sens. Gary Peters and Debbie Stabenow of Michigan will seek to amend a Senate energy bill being debated on Thursday. Durbin offered few details, but said the measure would "protect children from water that is deadly or poisonous."

State officials disconnected Flint from Detroit's water supply in 2014 and began using the Flint River to save money. Regulators failed to ensure the new water was treated properly and lead from pipes leached into the water supply, contributing to a spike in child lead exposure.

Sen. Bernie Sanders of Vermont, a Democratic candidate for president, called Flint's water problems "one of the great public health crises in modern times."

2:45 p.m.

Democrats in Michigan's Republican-controlled Legislature have introduced legislation to repeal an emergency manager law they say contributed to Flint's lead-tainted water crisis.

The law lets the state appoint a manager to control a local government or school district's finances. Flint was under state financial management when it disconnected from Detroit's water supply and began using the Flint River to save money.

State environmental regulators failed to ensure the new water was treated properly, which led to lead from pipes leaching into the supply.

Rep. LaTanya Garrett says emergency managers are unaccountable to residents and notes the worsening finances of Detroit's school district under state management.

Majority Republicans favor the law. House Republican spokesman Gideon D'Assandro acknowledges "mistakes were made in Flint" but says there are no cities under emergency management for the first time in 15 years. He says "that shows the early warning program and improved intervention measures we put in place worked."

1 p.m.

Michigan officials say that water samples in Flint are "trending better," but that it's too soon to give the go-ahead to residents to resume drinking unfiltered water.

Residents have been using bottled water and filters because the improperly treated supply was tainted with lead from pipes leading to old homes.

State Department of Environmental Quality Interim Director Keith Creagh stressed Wednesday that the test results are not statistically valid because there's no guarantee homeowner-provided samples are coming from homes at higher risk. Further testing continues.

Creagh says officials are studying whether the city's pipes are being recoated with enough of a lining of phosphates to keep the lead from leaching.

The state is working to identify newer neighborhoods with no lead pipes, so those residents can potentially get the all-clear on their water sooner.

12:05 p.m.

Flint Mayor Karen Weaver says she has hired a Virginia Tech professor whose extensive testing helped bring the city's lead-tainted water problems to light.

Weaver said at a news conference Wednesday that Marc Edwards will oversee all water testing done by the state and federal governments. She added he will be "fully independent," report to her and get paid through private donations. She also touched on the issue of Flint residents' water bills. Supplemental funding approved by the state House last week included \$3 million to help residents pay their bills.

Gov. Rick Snyder says Edwards and Weaver are part of a 17-member group of medical experts selected to determine long-term solutions to fix Flint's water system and help residents who have been exposed to lead.

Snyder also announced that the state would have an increased administrative presence in Flint and called it the beginning of a long-term effort.

9:20 a.m.

Michigan Gov. Rick Snyder and Flint Mayor Karen Weaver have scheduled a news conference to address the actions the Michigan city has taken and the next steps it will take to deal with a public health emergency caused by lead-tainted water.

The state's website says the news conference will be at 11 a.m. Wednesday.

Others expected at the news conference are Michigan State Police Capt. Chris Kelenske, Department of Environmental Quality Interim Director Keith Creagh and Department of Health and Human Services Director Nick Lyon.

9 a.m.

Michigan Gov. Rick Snyder has named a group of medical and field experts to a committee that will determine long-term solutions to fix Flint's water system and help residents who have been exposed to lead.

In a news release issued Wednesday, the governor says the 17-member committee will make recommendations regarding the health of people exposed to lead, study Flint's water infrastructure and determine potential upgrades, and establish ways to improve communication between local and state government.

The committee includes Flint Mayor Karen Weaver, Virginia Tech professor Marc Edwards, who has extensively studied the issue in Flint and elsewhere, and Dr. Mona Hanna-Attisha, who is credited with bringing the problem to the public's attention after state agencies initially dismissed her concerns.

Members will serve three-year terms expiring Dec. 31, 2018.

8 a.m.

A new lawsuit asks a federal judge to force Michigan and the city of Flint to replace all lead pipes in Flint's water system to ensure residents have a safe drinking supply.

The complaint, filed Wednesday, says service lines from water mains into homes should be replaced at no cost to customers. The suit seeks an order requiring city and state officials to remedy alleged violations of the federal Safe Drinking Water Act.

It's at least the fourth lawsuit filed over Flint's lead-tainted water. The others seek financial damages and class-action status.

The plaintiffs are the Natural Resources Defense Council, American Civil Liberties Union of Michigan, Concerned Pastors for Social Action and resident Melissa Mays.

This item has been corrected to reflect the proper name of the Natural Resources Defense Council.

<http://www.sacbee.com/news/nation-world/national/article56796043.html>

Officials: Bathing in Flint water OK despite rashes

The Detroit News – January 27, 2016, By Karen Bouffard

State health officials Wednesday repeated a recommendation that Flint parents can bathe children in the city's water, despite an increase in rashes reported in the past couple of weeks.

An advisory from the Michigan Department of Health and Human Services said there is "no scientific link" between Flint water and skin rashes that began appearing after the city switched from the Detroit system's Lake Huron water to Flint River water in April 2014.

The city switched back to the Detroit water system in mid-October, but residents still can't drink the water due to lead seepage from water pipes damaged by highly corrosive Flint River water.

Michigan Chief Medical Executive Dr. Eden Wells said there has been an increase in rashes reported to the city's Safe Drinking Water Hotline, totaling just under a dozen during the the past week and a half. Hurley Medical Center pediatrician Dr. Mona Hanna-Attisha told The News she too has observed an increase in skin rash cases.

A research initiative will be announced in the next few days to explore what's behind the rashes, Wells said.

"There's going to be a system in place to further evaluate the rashes," said Wells, who is also a clinical associate professor of epidemiology at the University of Michigan. "Let's get more information about these rashes so we can get the data.

"We take every concern about a rash very seriously, and we're working with our federal partners and all the doctors in the community to get more information not only about rashes but about (other health concerns.)"

Hanna-Attisha, the pediatrician whose research uncovered a spike in lead poisoning among Flint children, said a connection with the water can't be ruled out.

"We are seeing a resurgence of skin issues right now," Hanna-Attisha said. "Is there something else going on (with the water)?"

"(Investigators) are talking about copper, they're talking about phosphate, they're talking about other reasons people are having skin issues."

Currently, rashes must be reported to the state health department only when an infectious disease is suspected, such as chickenpox or measles. The Michigan Department of Health and Human Services is working with the Centers for Disease Control and Prevention as well as the Environmental Protection Agency to determine what additional supports and surveillance may be necessary to track the rashes.

Testing by the state Department of Environmental Quality and the federal EPA has shown residual levels of chlorine in some parts of the water system, which they say could be improved. State officials note that chlorine helps prevent bacteria in the water, and testing in parts of the system with the lowest levels of chlorine have found no bacteria present.

Hanna-Attisha noted that parents should bathe their children in lukewarm water, since more lead is present in hot water than in cold. State health officials should heed parents concerns, she added.

"We have little kids coming to school that haven't had a good bath since October," she said. "We have to listen to our families and believe them."

Senate panel approves \$28 million for Flint assistance

Detroit Free Press – January 27, 2016, By Kathleen Gray

LANSING -- A \$28 million appropriation for a variety of activities surrounding the Flint water crisis was unanimously approved by the Senate Appropriations Committee Wednesday and is expected to get a vote in the full Senate on Thursday.

The allocation of the money -- but not the amount -- changed a bit because of the huge amount of bottled water that's been donated to the city of Flint from all over the country. So funds initially slotted for the purchase of water has been shifted to address other needs in Flint.

“The biggest request was for \$8 million for water and water filters. Because of the generosity of people all over the country, we seem to have less of a need for direct purchases of water,” said Sen. David Hildenbrand, R-Lowell, the chairman of the committee. “So we’ll pull a little money out of the Michigan Department of Health and Human Services and transfer it to the Michigan Department of Education to beef up health assessments.”

Some \$1.75 million was taken from the purchase of bottled water and shifted to MDE; another million was taken from bottled water purchasing and moved to Genesee County for nutritional support; and an additional \$500,000 was taken from the bottled water line item and shifted to help provide more nursing support.

Some of the other items that will get funding include:

- \$3 million to help with unpaid utility bills.
- \$500,000 for an infrastructure integrity study using outside experts.
- \$3.8 million to treat Flint children with high blood lead levels, and \$275,000 to assess whether there's a link with a spike in Legionnaires disease cases in Flint and the lead-tainted water.
- \$1.4 million to replace plumbing fixtures in schools, child care centers, foster care and nursing homes.
- \$2 million for work being done by the Michigan National Guard.
- \$1.5 million for field operations costs for MDHHS.

The bill, which passed the House of Representatives unanimously last week, now moves to the full Senate for a vote. If it passes, it will have to go back to the House for final approval of the changes made in the Senate.

<http://www.freep.com/story/news/local/michigan/flint-water-crisis/2016/01/27/senate-panel-approves-28-million-flint-assistance/79409742/>

Michigan officials say too soon to give all-clear on water

WLNS – January 27, 2016

(AP) – Michigan officials say that water samples in Flint are “trending better,” but that it’s too soon to give the go-ahead to residents to resume drinking unfiltered water.

Residents have been using bottled water and filters because the improperly treated supply was tainted with lead from pipes leading to old homes.

State Department of Environmental Quality Interim Director Keith Creagh stressed Wednesday that the test results are not statistically valid because there’s no guarantee homeowner-provided samples are coming from homes at higher risk. Further testing continues.

Creagh says officials are studying whether the city’s pipes are being recoated with enough of a lining of phosphates to keep the lead from leaching.

The state is working to identify newer neighborhoods with no lead pipes, so those residents can potentially get the all-clear on their water sooner.

Flint Mayor Karen Weaver says she has hired a Virginia Tech professor whose extensive testing helped bring the city’s lead-tainted water problems to light.

Weaver said at a news conference Wednesday that Marc Edwards will oversee all water testing done by the state and federal governments. She added he will be “fully independent,” report to her and get paid through private donations.

She also touched on the issue of Flint residents' water bills. Supplemental funding approved by the state House last week included \$3 million to help residents pay their bills.

Gov. Rick Snyder says Edwards and Weaver are part of a 17-member group of medical experts selected to determine long-term solutions to fix Flint's water system and help residents who have been exposed to lead.

Snyder also announced that the state would have an increased administrative presence in Flint and called it the beginning of a long-term effort.

The Michigan Department of Health and Human Services today reminded parents that it is okay to bathe in water from the Flint water system.

The state is aware of concerns related to skin issues, but there is no known scientific link connecting rashes to the change in water source.

Many Michigan cities have higher lead levels than Flint

The Detroit News – January 28, 2016, By Mike Wilkinson, Bridge Magazine

Across Michigan, in cities large and small, lead poisoning continues to plague children, limiting them in school and on the playground.

While much of the state's focus on lead has rightly been on poisoned water in Flint, the metal continues to turn up annually in the bodies of thousands of children across the state, at percentages well above the numbers that raised red flags in Flint.

Elevated blood-lead levels are seen in a higher percentage of children in parts of Grand Rapids, Jackson, Detroit, Saginaw, Muskegon, Holland and several other cities, proof that the scourge of lead has not been eradicated despite decades of public health campaigns and hundreds of millions of dollars spent to find and eliminate it.

[DETROIT NEWS](#)

[Interactive map: Michigan cities with high lead levels](#)

"This is still an issue. It's not going away," said Dr. Eden Wells, chief medical executive of the Michigan Department of Health and Human Services.

Many in the state were shocked earlier this year by the findings in Flint: After a steady decline in lead levels, they began to rise in 2014 after the city switched its water source from Lake Huron to the Flint River. That change in water supply, experts say, triggered the increase in lead poisoning because the more corrosive river water may have stripped lead from older pipes and bled it into the drinking supply.

That uptick in Flint, noted by researchers, is what finally forced state officials to confront the dangers in the city's water. Five percent of the Flint children tested had elevated levels of lead, though certain parts of the city had much higher percentages.

Now consider lead exposure rates in some other parts of Michigan:

■ In Detroit, Hamtramck and Highland Park, 10 ZIP codes saw more than 10 percent of children tested have a positive test in 2014. That was nearly 1,000 of the 7,263 children tested, or 13.5 percent.

■ In Grand Rapids, nearly 1 in 10 children of those tested in four ZIP codes tested positive in 2014.

■And in Adrian in south-central Michigan, more than 12 percent of the 640 children tested showed elevated levels of lead.

“We do have areas in our state and areas in our country where children are at risk,” Wells said.

In Flint, crisis pushed rise

Flint’s unfolding water crisis once again brought to the fore a danger long known to rob children of cognitive and physiological function and impulse control. High levels of lead found in students in the Detroit Public Schools system have been linked to that city’s notoriously low test scores.

In the 48206 ZIP code on the west side of Detroit, 20.8 percent of the 701 children tested had elevated levels in 2013, and 20.3 percent in 2014, the most recent year tested.

In much of the state where lead is a problem, the source of poisoning has been the traditional culprits: old lead paint on homes built before 1978 and lead residue in dust and soil. Young children are particularly susceptible because of their proximity — on the ground — to the most common sources of lead. They crawl on their hands, pick up dust and dirt and put their hands in their mouths.

Because of the well-documented dangers of lead, pediatricians are constantly testing children. “And every week there are more kids on” a weekly statewide report on elevated lead levels, said Paul Haan of the Healthy Homes Coalition of West Michigan, which works to eliminate household dangers to make children safer and healthier. Parts of Grand Rapids have some of the highest concentrations of children with lead, he said.

The most recent report had 90 children on it.

Constant struggle

Taking a broader, longer-term view, far fewer Michigan children are testing positive for lead poisoning in recent decades. In 2012, 4.5 percent of those tested in Michigan showed elevated lead levels, more than five times less than the 25.6 percent a decade earlier.

In 2013, that level sank to 3.9 percent and fell again to 3.5 percent in 2014. But that is still 5,053 children under age 6 who tested positive in 2014. Each had lead levels above 5 micrograms per deciliter. (Though no amount is considered safe, 5 micrograms is the threshold that experts say constitutes a “much higher” level than most children.)

The impact on children’s nervous systems and brains are obvious to parents and teachers: children who cannot stay on task, retain information or progress academically and socially. Even low amounts of lead can steal points from a child’s intelligence — cognition they cannot get back; lead poisoning is irreversible.

Some researchers have suggested the overall reduction of lead levels in recent decades, mainly from the elimination of lead in gasoline, explains the decline in violent crime in the United States and elsewhere. But those children who live where lead exposure is still found, the implications remain profound and heart-breaking.

Kieya Morrison is a preschool teacher in Detroit and a former veteran kindergarten teacher. Recently, she had a young girl in her class who had elevated levels of lead in her system (teachers are apprised of health issues with children).

Learning was difficult for the girl and Morrison often would go over and over simple shapes: This is a triangle, this is a square. But for this girl, it was a constant struggle.

“She had cognitive problems. She had trouble processing things,” Morrison said. “She could not retain any of the information.”

At her preschool in Detroit, where the teacher-student ratio was 1 to 8, Morrison was able to give the girl more attention and “catch her” when she fell behind.

Morrison said she feared what happened to the girl — her family moved out of the area after preschool — once she got to kindergarten and first grade, where there could be just one teacher for every 30 students.

“You really get lost,” Morrison said of the older grades. “There’s nothing to catch you.”

Solving the problem

In addition to federal and state money, foundations are pouring money into programs across Michigan that help pay for eliminating lead sources in older homes when a family cannot afford to pay for such work. Progress remains slow. In the last 10 years, those programs have paid for lead abatements in 1,500 homes across western Michigan. Yet an estimated 60,000 homes need lead abatement just in that region, said Haan of the Healthy Homes Coalition of West Michigan.

Even quantifying the extent of the problem is difficult. A 1998-2000 study estimated that 38 million homes in the United States had lead-based paint and 24 million had “significant lead-based hazards.” In many cases, homeowners eliminate the danger themselves when they repaint a home or replace older plumbing fixtures.

But in many places where the housing stock is the oldest and incomes the lowest, dangers persist; places such as Detroit and Muskegon. That’s where foundations and HUD have poured money into tackling a problem that continues to confound.

Though the state also has its own program to help pay for abatement, its budget is limited. Over the last year, 180 homes have qualified through the state program, said Wells, the state’s chief medical executive.

In addition to the discontinuation of lead in gas, much of the decline in lead levels in recent decades is attributed to changes in construction materials — lead paint was banned in 1978 — and public health activism. The state reaches out to parents and healthcare providers and provides information on where families can turn for help.

Pediatricians are encouraged to test all children ages 1 and 2 for lead, and it is required for Medicaid patients. If there is a positive test, the results are confirmed with another blood test. Family and home histories are taken — the source of lead could be from a parent’s workplace or from the home.

Haan said lead is treated as a medical problem yet the impact extends far beyond a blood test. Beyond cognitive and physiological scars, its toxicity has been correlated to long-term effects that impact society at large, from wages to higher incarceration rates and the welfare system. More needs to be done to eliminate the problem before a child tests positive.

“The problem is,” Haan said, “we’re still using kids as lead detectors.”

Kent County to start testing for lead in water
Michigan Radio – January 28, 2016, By Virginia Gordon

The Kent County Health Department will conduct its own tests of water for lead, copper and arsenic, starting in February. New equipment will be installed next week.

Right now, Kent County tests water samples for E.coli and some chemicals like fluoride and chloride. But lead testing is handled by the state.

According to Allyson Chirio, lab manager for the Kent County Health Department, the new testing capacity is not in response to the Flint water crisis.

But Chirio said that the crisis has increased the demand for water tests both from people who get their water from wells and those whose water is from public systems.

"I think that Flint has made people question and ask what's in their water supplies," said Chirio. "They're just concerned for their families and their children about whether there's lead in their water."

Kent County Health Department tests water samples submitted by individuals, businesses and government entities both inside and outside Kent County. The tests cost \$18 per metal tested.

Chirio said Kent County's new testing capacity could help the Michigan Department of Environmental Quality keep up with testing water.

According to Chirio, the Michigan Department of Environmental Quality has asked the Michigan Department of Health and Human Services Laboratory for help with testing. Chirio said she told the director of the MDHHS lab that the Kent County lab also would be happy to help when it is ready to test for lead next month.

'No Pill for Lead': Flint Mom Fights Baby's Toxic Lead Exposure

NBC News – January 27, 2016, By Lisa Riordan Seville

Even when her lids are heavy with exhaustion, Tiana Lankford watches her three girls with a mother's eye. In Flint, Michigan, long plagued by poverty, poor schools and one of the country's highest murder rates, she's had to. But she wasn't looking out for the water coming through her tap.

Now with every stumble, every frustration, every cry, she wonders what the water has done to her kids, especially her baby Carlina, who is one of hundreds of Flint children confirmed to have been poisoned by lead in the city's water.

"I'm always looking for something, watching them all the time," she said. "My youngest daughter is almost two. She's been drinking that water her whole life."

About 9,000 Flint children were exposed to lead after the city switched from Detroit's water system to pulling water from the Flint River to cut costs. The corrosive water leached lead from the city's old pipes and pulled it into resident's taps. Lead has proven time and again to be highly toxic, particularly to children. At low levels, it can knock points of a kid's IQ, hinder learning and cause behavioral problems. At very high levels it can cause kidney damage, seizures or death.

It also harms communities. Lowering the IQ of an entire generation could have a devastating economic impact on Flint, where 40 percent of residents already live in poverty. Some research has linked lead exposure to crime, another blow to a city that in the last half century went from making cars to making headlines for homicides.

To counteract the effects of lead exposure, for which there is no cure, Flint's children will need better nutrition, better access to healthcare, a rich education as they grow up. All are things Flint struggled to provide even before the city's water went bad.

"These kids already had every barrier to their success and then we give them lead," said Dr. Mona Hanna-Attisha.

The Flint pediatrician was among the first to make the link between the change in the water and the growing number of lead-poisoned children in the summer of 2015. State and city officials largely dismissed her findings as a seasonal blip. At a press conference Jan. 27, Gov. Rick Snyder appointed her to serve on the team of medical experts that will identify long-term solutions to the crisis in Flint.

Two days prior, she told NBC News the state had thus far done too little to meet the needs of its exposed kids.

"Nothing has been committed as of yet for the most pressing need, which is children and health," she said.

Any solution for Flint's kids will need to be long term. When children are exposed, their bodies suck up lead like a sponge. The lead moves into their soft tissue—liver, kidney, brain, and lungs—and settles in their bones. From that point on, a child may test negative even though the substance is lodged in the body.

But the heavy metal and its effects remain. Mothers exposed years prior can pass the lead along to their unborn children. It may even cause genetic changes in their grandchildren, according to a study released by Wayne State University researchers in October.

Tiana Lankford didn't know to be worried about her baby last fall. She went to a routine appointment required by WIC, the government's nutritional program for low-income women and children. The program provides formula for mothers who don't breastfeed.

Tiana, a single mother who works full time, formula-fed little Carlina just as she'd fed Amoni, who is nearly 3, and Dasani, 13, before her. Mostly she used bottled water, but when she ran out, she turned on the tap. Remembering lessons passed down, she boiled it to kill bacteria before mixing up the bottles. No one told her there was lead in the water. No one told her boiling the water could make things worse by concentrating the lead.

In November, Lankford got a letter in the mail saying Carlina had a lead level of seven micrograms per deciliter. While there is no safe level of lead in the blood, the Centers for Disease Control suggests seeking medical care for anything over five.

"I didn't get a call, I didn't get a call to come in, sit down, talk -- I had a letter," she said. It recommended she get Carlina to a family doctor. Lankford now lives outside Flint in a nearby township with more open space and different water. When she went to a nearby doctor to get her girls checked out, she said she was turned away for being rude.

"Why is it so hard for me to get them to see a doctor just to know what their levels are right now?" she said.

Preschool Director Jennifer Rivera hears a lot of those questions these days. As kids tumble through the door of Richfield Early Learning Center every morning, reaching for Play-Doh and blocks, anxiety follows. Nearly a quarter of Rivera's 64 students have trouble with speech or articulation. Many have behavioral issues that surprised the 25-year veteran last fall. Now she, and many parents, wonder what role lead played in that, and what they will need to do to counteract it.

"It breaks my heart because they already have a struggle," she said. "People need to come in and help them to show them what they need to do with their children."

In her office in the state capital of Lansing, Dr. Eden Wells faces the largest public health crisis of her career. The top medical officer of Michigan's Department of Health and Human Services, she has been thinking about how the state will

address the future health of Flint, a city of nearly 100,000. That charge makes the massive problem of how the city is going to replace around 25,000 pipes that contain lead look comparatively manageable.

"There is no pill for lead," said Wells. Counteracting lead means calcium, vegetables, early childhood education and regular monitoring, she added, requiring regular monitoring by a doctor. It means providing a child "a very healthy growing environment" -- a tough task in a nearly bankrupt city.

"We're going to treat every child as though they were exposed," said Wells.

Tiana Lankford is working on that assumption. At the end of long days of work, braiding hair, cleaning up and making dinner, she gets on her phone, her only internet access, and reads everything she can about how to help her children. She's angry. She's tired. In the harder moments, she feels guilty.

"Because as a parent you're always the one that's responsible to make sure you do the right thing for them," she said. "They don't want to hear, 'Well, mommy had you in a bad place with bad city officials that wouldn't do the best for you.' Kids don't care about your excuses."

But she's also a Flintstone, as people here call themselves, and Flintstones survive.

"We're just going to revive from this stronger than we ever were," she said. "I think the whole city is just going to prove everybody wrong that's been trying to blot us out."

Immunization waivers plummet 40% in Michigan

Detroit Free Press – January 28, 2016, By Lori Higgins

The number of immunization waivers requested by Michigan parents is down nearly 40%, a year after a new state rule kicked in requiring parents to attend a class at their local health department if they want a waiver.

There have been nearly 8,000 fewer vaccination waivers for children entering Michigan schools so far this school year, according to information released this morning by the Michigan Department of Health and Human Services.

The kindergarten waiver rate has decreased from 5.18% to 3.32%, the seventh-grade rate has dropped from 4.55% to 2.78% and the rate for new students to a school district has dropped from 4.28% to 2.47%.

Michigan in 2014 had the sixth highest immunization rate in the country for kindergarten students. And the waiver rate is particularly high for some counties where as many as 20% of the kids had waivers.

"This improvement in our vaccination coverage rates means that more kids are protected from outbreaks and serious vaccine-preventable diseases," Dr. Eden Wells, chief medical executive for MDHHS, said in a news release this morning.

The change in the rule that went into effect in January 2015 requires that parents who want a waiver for philosophical or religious reasons must attend a session at their local health department. Parents who have a medical waiver aren't required.

The sessions range from about 15 minutes to about 30 minutes. Some parents only want to keep their child from taking a particular vaccine, or have their children vaccinated on a schedule that's different than what's required.

During the sessions, parents learn about the required vaccines, the diseases they're designed to prevent, the benefits of the vaccines and the implications if kids don't receive the vaccines.

"By ensuring that parents have the opportunity to address and discuss concerns with their local health departments, we're providing parents with knowledge they can use when making a decision about vaccinating their child," Nick Lyon, director of the MDHHS, said.

State officials have said the rule was in part targeted at parents who receive waivers out of convenience — those who run out of time to schedule a visit to get their children vaccinated, and opt to just sign a waiver instead.

Michigan vaccine waiver rates plummet under rule change, latest numbers show MLive – January 28, 2016, By Julie Mack

The number of Michigan schoolchildren waiving vaccines has dropped by more a third under a state rule change making it more difficult for parents to obtain a waiver, state officials announced Thursday.

As of November 2015, 2.8 percent of Michigan K-12 students had a vaccine waiver on file compared to 4.9 percent in fall 2014, based on preliminary numbers collected from schools by the Michigan Department of Health and Human Services.

In raw numbers, that's nearly 8,000 fewer vaccination waivers, down 39 percent from fall 2014, the department said.

Michigan has long had among the highest vaccine-waiver rates in the country, making its children and larger communities more vulnerable to disease outbreaks.

Department of Health and Human Services officials are cheering the latest numbers as a public health win.

"This improvement in our vaccination coverage rates means that more kids are protected from outbreaks and serious vaccine-preventable diseases," Dr. Eden Wells, HHS chief medical executive, said in the HHS press release announcing the preliminary data. "Unfortunately we have not eradicated some very serious diseases that affect children and adults alike. We continue to see outbreaks of pertussis, (whooping cough) and chickenpox in areas of Michigan as well as nationwide."

Schools are required to collect vaccination records each fall for kindergartners, seventh-graders and any child in another grade transferring from another school system.

Between fall 2014 and 2015, the kindergarten waiver rate dropped from 5.2 percent to 3.3 percent; the seventh grade rate dropped from 4.6 percent to 2.8 percent; and the rate for transfer students dropped 4.3 percent to 2.5 percent, according to the HHS.

State officials credit the declines to a rule change implemented in January 2015.

In the past, Michigan parents could waive vaccines by simply signing a paper at their school stating they had a philosophical opposition to vaccines.

Health officials suspected some waivers being obtained simply for convenience because it was easier to sign a waiver than get the immunizations.

Starting in January 2015, Michigan parents can still get a waiver, but now must get the paperwork at their county health department and sit through an education session about vaccines and the diseases they are intended to prevent.

Parents also must sign a form saying understand they may be putting their own children and others at risk by refusing the shots.

"By ensuring that parents have the opportunity to address and discuss concerns with their local health department, we're providing parents with knowledge they can use when making a decision about vaccinating their child," HHS Director Nick Lyon said in the HHS press release.

However, there has been backlash against the new rules from people who say it undermines parental choice and there is an effort under way to gut the new rules.

Last month, House Bills 5126 and 5127, were by Rep. Tom Hooker, would prohibit the department from enforcing waiver requirements not mandated in state law, including the immunization education discussion.

In December 2013, MLive.com published an investigation of vaccination rates in Michigan and found a third of Michigan elementary schools had waiver rates high enough to put them at risk of an outbreak of whooping cough or measles, the most contagious vaccine-preventable diseases.

Many of those clusters of unvaccinated children are in affluent and well-educated communities, such as Birmingham, Bloomfield, Rochester and Grosse Pointe, the MLive investigation found. [Read the entire series here.](#)

Within schools, outbreaks of diseases such as measles, whooping cough or chicken pox are particularly problematic for children or adults in the building with medical issues that prevent them from being vaccinated or who have suppressed immune systems, such as a person undergoing chemotherapy.

Beyond the school walls, whooping cough and measles can easily spread to other vulnerable people in the community, such as babies too young to be vaccinated, elderly persons and people undergoing chemotherapy or otherwise have a suppressed immune system.

Michigan children entering kindergarten must show proof of immunization for measles, pertussis, polio, mumps, rubella, hepatitis B, chicken pox, diphtheria and tetanus -- unless a parent signs a waiver.

By seventh grade, students must be immunized against meningococcal and receive a DTP or DTaP booster for diphtheria, tetanus and pertussis. Those vaccines also can be waived by parents.

Michigan is one of 20 states that allows parents to obtain a waiver for reasons beyond religious or medical concerns. These are classified as "philosophical" waivers, which in fall 2014 comprised 71 percent of all waivers.

The national median waiver rate for kindergartners was 1.7 percent for fall 2014 compared to 5.2 percent in Michigan, according to the federal Centers for Disease Control. Michigan had the fifth-highest rate in the country behind Idaho, Vermont, Oregon and Alaska in percentage of kindergartners who have waived at least one vaccine.

MDHHS: Fewer Michigan parents requesting vaccine waivers

WILX – January 28, 2016

LANSING, Mich. – As a result of a rule change in January 2015 related to non-medical vaccination waivers, preliminary data show that Michigan has seen a 39 percent decrease in the number of waivers submitted this year compared to the same time last year.

In 2014, Michigan had the 6th highest immunization waiver rate in the country with more than five percent of kindergarten children not vaccinated with all required vaccines. All Michigan Kindergarteners, 7th grade students, and students moving from one school district to another are required to be up to date on certain immunizations or have a signed immunization waiver. High waiver rates result in more children susceptible to serious vaccine preventable diseases.

To address the high waiver rates in Michigan, a new rule went into effect in January of 2015 that requires parents seeking a non-medical waiver for their child's vaccinations to meet with local health department staff before obtaining the waiver. Previously the waiver could be obtained from the school and signed by the parent at the time of school enrollment.

"By ensuring that parents have the opportunity to address and discuss concerns with their local health department, we're providing parents with knowledge they can use when making a decision about vaccinating their child," said Nick Lyon, director of the Michigan Department of Health and Human Services. "Michigan's local health departments have been instrumental in working with and educating parents who have had concerns about vaccines and I applaud them for their understanding, assistance and dedication."

So far this school year, there have been nearly 8,000 fewer vaccination waivers for children entering Michigan's schools. The Kindergarten waiver rate has dropped from 5.18 percent to 3.32 percent; the 7th grade rate has dropped from 4.55 percent to 2.78 percent; and the rate for new students to a school district has dropped from 4.28 percent to 2.47 percent.

"This improvement in our vaccination coverage rates means that more kids are protected from outbreaks and serious vaccine-preventable diseases," said Dr. Eden Wells, chief medical executive for the MDHHS. "Unfortunately we have not eradicated some very serious diseases that affect children and adults alike. We continue to see outbreaks of pertussis, (whooping cough) and chickenpox in areas of Michigan as well as nationwide."

Preliminary data shows a statewide decrease in school-age vaccine waiver rates

Upper Michigans Source – January 28, 2016, By Aaron Boehm

LANSING — Preliminary data show that Michigan has seen a 39 percent decrease in the number of waivers submitted this year compared to the same time last year as a result of a rule change in January 2015 related to non-medical vaccination waivers.

According to the Michigan Department of Health and Human Services, Michigan had the sixth highest immunization waiver rate in the country in 2014. More than five percent of kindergarten children were not vaccinated with all required vaccines. All Michigan Kindergarteners, 7th grade students, and students moving from one school district to another are required to be up to date on certain immunizations or have a signed immunization waiver.

To address the high waiver rates in Michigan, a new rule went into effect last January that requires parents seeking a non-medical waiver for their child's vaccinations to meet with local health department staff before obtaining the waiver. Previously the waiver could be obtained from the school and signed by the parent at the time of school enrollment.

"By ensuring that parents have the opportunity to address and discuss concerns with their local health department, we're providing parents with knowledge they can use when making a decision about vaccinating their child," said Nick Lyon, director of the Michigan Department of Health and Human Services. "Michigan's local health departments have been instrumental in working with and educating parents who have had concerns about vaccines and I applaud them for their understanding, assistance and dedication."

So far this school year, there have been nearly 8,000 fewer vaccination waivers for children entering Michigan's schools. The Kindergarten waiver rate has dropped from 5.18 percent to 3.32 percent; the 7th grade rate has dropped from 4.55 percent to 2.78 percent; and the rate for new students to a school district has dropped from 4.28 percent to 2.47 percent.

"This improvement in our vaccination coverage rates means that more kids are protected from outbreaks and serious vaccine-preventable diseases," said Dr. Eden Wells, chief medical executive for the MDHHS. "Unfortunately we have not eradicated some very serious diseases that affect children and adults alike. We continue to see outbreaks of pertussis, (whooping cough) and chickenpox in areas of Michigan as well as nationwide."

MDHHS will continue to monitor waiver rates and immunization coverage levels. For more information about Michigan's vaccine or waiver rates, [click here](#).

Group urges Gov. Snyder to oppose legislation to weaken vaccination opt out rules MLive – January 28, 2016, By Brian McVicar

A coalition of doctors, nurses and educators are urging lawmakers to reject legislation they fear would threaten public health by undoing state rules that make it more difficult for parents to opt out of getting their children vaccinated.

The group, which held press conferences Thursday in Grand Rapids, Lansing, Southfield and Traverse City, said immunization opt-out rates have dropped since new rules were implemented in January 2015 that require parents to sit down with a local health worker before obtaining a vaccination waiver.

Eliminating those requirements, which legislation currently in the state House of Representatives aims to do, would be a step backward and threaten the health and safety of Michigan children, said the group, known as the Parent Information Network (PIN).

"I'm real concerned that we'll go back and have a lot of unimmunized children," said Dr. Jim Applegate, a Grand Rapids area physician who, along with other health professionals, attended a press conference Thursday at Innovation Central High School in Grand Rapids.

Data released Thursday by the Michigan Department of Health and Human Services shows that 2.8 percent of the state's K-12 students had a vaccine waiver on file as of November 2015. That's compared to 4.9 percent in fall 2014.

Related: [Michigan vaccine waiver rates plummet under rule change, latest numbers show](#)

PIN officials said the drop in vaccine waivers shows the state's new policy has been successful in combating misinformation and showing parents the health benefits of the immunizations.

"This is a policy that we need to celebrate and we need to protect," said Adam London, administrative health officer at the Kent County Health Department.

He pointed to a 36 percent immunization waiver rate drops in Kent County as further evidence of the policy's success. Nearby counties of Allegan and Kalamazoo saw reductions of 21 percent and 12 percent, respectively.

The MDHHS, pointing to a connection between low immunization rates and various outbreaks, adopted new rules in 2014 that require parents seeking a waiver to be educated by a local health worker about vaccines and the diseases they are intended to prevent.

Parents also must sign a form acknowledging they have been informed of the risks for their child and the risks their child may be causing others.

But one state representative is hoping to undo those changes.

Tom Hooker, R-Byron Township, introduced legislation in December 2015 that would prohibit the department from enforcing waiver requirements not mandated in state law, including the immunization education discussions.

Hooker could not be immediately reached for comment Thursday afternoon. His staff, though, referred to a previous statement Hooker issued regarding the legislation.

"Parents should be able to make decisions on their child's health and education, whether it's a medical condition or by educated choice," the statement said. "This is not an attack on the Department of Health and Human Services, this is a return to DHHS policy that existed a year ago."

Some have questioned with DHHS rules are burdensome because parents may be forced to drive long distances to meet with a health official. An online education option would be helpful to parents.

Applegate, however, said there's real benefits in discussing vaccinations face-to-face with a qualified and trusted health professional or their family physician.

"That sort of longitudinal relationship is important in combating it," he said. "If they go to the health department, they can get information there, and the health nurses are very loving and kind and caring people."

Unless they get a waiver, parents are generally required by state law to immunize their school-age children against vaccine-preventable diseases, such as polio, measles, whooping cough, mumps and tetanus.

In Michigan, parents can receive a waiver for medical or religious reasons. Michigan is also one of 20 states that allows waivers for "philosophical" objections, which is the most common form of parental request.

PIN officials said Hooker's legislation is currently before state House Health Policy Committee, and that they're sending a letter to Gov. Rick Snyder urging him to oppose the legislation.

Gov. Snyder-appointed committee meets to talk Flint water crisis

MLive – January 28, 2016, By Jiquanda Johnson

FLINT, MI – While Michigan Gov. Rick Snyder was holding his first meeting with the Flint Water Interagency Coordinating Committee, activists waited in hopes of meeting the governor to ask him to resign.

Snyder greeted press for the first five minutes of the meeting at the University of Michigan-Flint Northbank Center Wednesday, Jan. 27.

"This situation in Flint is a disaster," Snyder said. "This is something that is a terrible tragedy. People have been negatively impacted, potentially for their lives. How do we put solutions in place, how do we respond to this? I appreciate people's commitment. This is an opportunity for us to work together. We all have a common goal."

Snyder signed an executive order Jan. 11 creating the committee to work on what he called "long-term solutions" for the Flint water crisis and ongoing public health concerns plaguing residents.

The 17-member committee will be asked to "make recommendations regarding the health and welfare of people exposed to lead, study Flint's water infrastructure and determine potential upgrades, review Flint Water Task Force recommendations, and establish ways to improve communication between local and state government," Snyder said in an earlier announcement.

He tapped Hurley Dr. Mona Hanna-Attisha who raised a red flag on elevated lead levels in Flint children and whose research showed Flint's lead-in-water problems and questioned water testing methods; Virginia Tech university Professor Marc Edwards, Flint Mayor Karen Weaver, The Michigan Department of Environmental Quality, The U.S. Environmental Protection Agency and Genesee County leaders for the committee.

A group of activists from Illinois and Wisconsin waited for Snyder outside of the meeting door in hopes of asking him to resign.

"I had to come here to see for myself what is happening to the people," said Clyde McLemore, Lake County chairperson for the Black Lives Movement in Illinois. "This is not a third-world country and African Americans are suffering. Snyder needs to resign."

McLemore was visiting Flint with a group delivering water throughout the city. In three days, he said his group managed to get 800 cases of water donated to deliver to Flint but he is hoping there is a long-term solution.

"What is the real solution here?," he asked. "We want to know how we really can help. We are bringing water to the city, but that is only a temporary Band Aid."

McLemore and others from his group waited outside of the meeting door at the Northbank Center but did not get to speak with Snyder to address their concerns.

Members of the Flint Water Interagency Coordinating Committee

Members of the committee are Mayor Karen Weaver; Genesee County Board of Commissioners Chairman Jamie Curtis; Virginia Tech university Professor Marc Edwards; Dr. Mona Hanna-Attisha, director of the pediatric residency program at Hurley Medical Center; City Administrator Natasha Henderson; Jim Koski, former Saginaw county drain commissioner; Dr. Lawrence Reynolds, president and chief executive officer of the Mott Children's Health Center; Laura Sullivan, a professor of mechanical engineering at Kettering University; Genesee County Health Officer Mark Valacak; Harvey Hollins, director of the Michigan Office of Urban Initiatives; Col. Chris Kelenske, deputy state director of Emergency Management and Homeland Security Department with Michigan State Police; Keith Creagh, director of the Department of Environmental Quality, or his designee; Nick Lyon, director of the state Department of Health and Human Services, or his designee; Mike Zimmer, director of the state Department of Licensing and Regulatory Affairs, or his designee; state Treasurer Nick Khouri or his designee; and Brian Whiston, superintendent of public instruction, or his designee.

One additional member will be named at a later date, a news release from the Governor's Office says, and members will serve three-year terms expiring Dec. 31, 2018.

Lead poisoning: 'Flint is the tip of the iceberg'

The Christian Science Monitor – January 28, 2016, By Cathaleen Chen

Flint may be in crisis, but it isn't the only city in Michigan where high levels of lead poses urgent risks.

According to state records, two Michigan municipalities and six private water supplies, in addition to Flint, meet or exceed the federal limit on lead and copper in tap water. Exposure to high levels of such toxins can have severe and even fatal health complications, especially among the young, health care officials say. In fact, compared to Flint, a higher percentage of kids in a handful of cities – including Grand Rapids, Jackson, Detroit, Saginaw, Muskegon, and Holland – test positive for elevated levels of lead.

As the drinking water contamination crisis continues to unravel in Flint, health experts are now recognizing the hazard in other regions.

In Flint, five percent of the city's children test positive for high levels of lead. But in Grand Rapids as well as the greater Detroit area, more than 10 percent of children were found to have lead in them in 2014. For some parts of Detroit, it's as high as 13.5 percent. And in south-central Michigan, more than 12 percent of the 640 children from the town of Adrian had elevated levels of lead.

OPINION Five ways Americans can save water through food choices

"This is still an issue. It's not going away," Dr. Eden Wells, chief medical executive of the Michigan Department of Health and Human Services, told the Detroit News. Despite the millions of dollars spent on public health campaigns throughout the years, lead poisoning remains a serious concern.

In Detroit, researchers famously found a correlation between high levels of lead and public schools' poor performance on standardized tests.

Part of the contamination in Flint can be attributed to the use of hazardous lead service pipes that connect municipal main water supplies to older homes and communities. Many cities stopped using them decades ago, but millions of lead lines are still in use today.

"I think Flint is the tip of the iceberg," Yanna Lambrinidou, an assistant science and technology studies professor at Virginia Tech, told Michigan Live.

As The Christian Science Monitor's Jessica Mendoza reports, it's a problem that extends beyond Michigan.

"Flint is a microcosm," says Robert Glennon, a professor of law and public policy at the University of Arizona in Tucson and author of the book, "Unquenchable: America's Water Crisis and What To Do About It." "The maintenance of water systems and wastewater systems is not just an urban problem, or a problem for places with low-income residents. It's a problem all over the nation that needs to be addressed."

In response, some cities are launching initiatives to upgrade their water systems, as well as developing sustainable funding mechanisms to aid those efforts. Chicago, for instance, is in the middle of a 10-year plan, begun in 2012, to replace 900 miles of century-old pipes throughout the city – a project financed in part by cutting payroll at the Department of Water Management, raising water rates, and partnering with private contractors.

Next door to Flint, the city of Burton – using the state of Michigan's revolving fund for drinking water infrastructure projects – has likewise begun to replace its 1930s water mains, but with cheaper, non-corrosive, environmentally-friendly PVC pipes. The effort received an award from Genesee County in November.

But while Flint failed in properly treating its water supply, there is another culprit for lead poisoning across the state: lead-based paint. Toddlers and infants are especially vulnerable as they spent a lot of time on the ground, where lead paint residues linger in dust and soil.

Although lead poisoning is a far rarer occurrence now than it was decades ago, the risk persists, especially in low-income areas such as Detroit. Homeowners can tackle the problem by repainting an older home and replacing its plumbing fixtures, but some may not be able to afford such remodeling. For some apartment tenants, it may not even be possible.

Paul Haan of the Healthy Homes Coalition of West Michigan told Bridge Magazine's Mike Wilkinson that as many as 60,000 homes need lead abatement in western Michigan alone.

Three health goals in 2016 that will save money

MSU Extension – January 28, 2016, By Brenda Long

Many are feeling a financial squeeze to pay for health care costs along with other living expenses. Bridge Magazine pointed out that [Michigan middle class families](#) are not as financially healthy as their parents were. Fortunately, each of us has choices to live healthier lifestyles that can make a huge difference in our long-term health care costs. You can make a New Year's Resolution to start doing something positive and preventative today.

Chronic diseases are among the most prevalent, costly, and preventable of all health issues. According to [My Smart Choice Health Insurance](#), 62.1 percent of bankruptcies were medically related because the individuals had more than \$5,000 (or 10 percent of their pretax income) in medical bills, mortgaged their home to pay for medical bills, or lost significant income due to an illness.

Over 60 percent of Michigan adults have at least one chronic condition, which results in spending 75 cents of every health care dollar to treat these conditions. Over 95 percent of Michigan adults report engaging in unhealthy behaviors that increase their risk of developing a chronic disease, according to the [Michigan Department of Health and Human Services](#). According to the [World Health Organization](#), if the major modifiable risk factors (i.e., inadequate physical activity, poor diet, and smoking) were eliminated, at least 80 percent of heart disease, stroke, type 2 diabetes, and 40 percent of cancers would be prevented. Many of us know a family whose finances have been devastated by cancer or other major diseases.

We have all heard the healthy messages frequently during the last decade or two. Eat more fruits and vegetables, move more, reduce stress, and eat less sugar, fat and salt. Simple, right? But challenging for many to practice. Why? Because we usually need to change our mindset. Our beliefs, customs, habits and daily patterns may need careful thought to determine what will work to make a difference.

To start learning, the [Centers for Disease Control and Prevention](#) offers great healthy living resources on many topics.

Make a plan with [SMART goals](#). Use our [SMART goals worksheet](#) to write down yours and plan your new schedule incorporating your new goals. SMART is an acronym that stands for **S**pecific, **M**easurable, **A**ttainable, **R**ealistic and **T**imely.

Look for supports who will keep you on track. This could be an exercise buddy, an online challenge, or joining a weight reduction or fitness club. Check out [Small Steps to Health and Wealth](#) for motivation to improve both health and personal finances.

Periodically evaluate your progress and adjust if needed.

Connect your health and financial security. Use the [AARP Health Care Costs Calculator](#) to estimate your health costs during retirement, when you are more likely to have at least one chronic health condition. Or make small changes now to lead to lower medical bills and more savings later.

Making healthy financial decisions and living changes takes time, patience, and discipline. Invest in yourself and your family. Taking preventative actions, no matter where you are starting from, can lead to better health outcomes and fewer health care expenses in the long run.

Plummeting vaccination waivers a victory, but bills threaten public health

MLive – January 28, 2016

The number of parents choosing not to vaccinate their schoolchildren has plummeted in Michigan, a victory for public health and those who are battling the vocal anti-vaccination movement.

Despite this success, there is work to do to ensure progress is not undermined by a group of state lawmakers whose proposals defy science and reason.

Data released today from the Michigan Department of Health and Human Services prove that new rules, which were championed by MLive Media Group following a 2014 investigation of Michigan's vaccination waiver rates, are working to stem a health crisis that had been growing in Michigan and across the nation.

Related: Look up the change in vaccination waiver rates in your county

It is now more difficult for parents to send their children to school without getting vaccinated for preventable diseases such as whooping cough and measles.

Starting this school year, parents were required to be educated by local health officials about vaccines and the diseases they prevent before obtaining a waiver allowing them to send their unvaccinated children to public schools.

Since the new rules were enacted, there has been a 39 percent decrease in the number of waivers submitted this year compared to the same time last year. The numbers bode well for preserving "herd immunity," the public health concept that when the vast majority of people are vaccinated, their immunity protects the vulnerable and prevents the most contagious diseases from spreading.

Our hope is that this ill-informed legislation dies in committee.

To our dismay, legislation proposed by Republican state Reps. Thomas Hooker, Ray Franz, Ken Goike, Triston Cole, Joel Johnson and Gary Glenn would gut the new rules and likely reverse this year's progress.

The bills, if passed into law, would prohibit MDHHS from enforcing waiver requirements not mandated in state law, including the immunization education discussions.

Despite the decrease in waivers, outbreaks of pertussis and chicken pox are occurring in Michigan, and there are still very serious, preventable diseases affecting both children and adults that pose a public health threat.

Claims by these lawmakers that the new requirements undermine parental choice ignore overwhelming evidence and research by scientific and medical professionals that vaccines prevent contagious, deadly diseases from gaining a foothold.

Our hope is that this ill-informed legislation dies in committee, and Michigan continues to strengthen its commitment to protecting our children from vaccine-preventable diseases.

Michigan vaccination waiver rate drops

Michigan Radio – January 28, 2016, by Will Greenberg

Non-medical vaccination waiver rates for school kids are down significantly since this time last year.

Following a new state law starting in January 2015, the number of families obtaining vaccination waivers for their child is down 39% compared to a year ago – that’s roughly 8,000 fewer waivers this year, according to the Michigan Department of Health and Human Services.

The new law requires parents seeking a waiver to first meet with a health department official for a consultation.

Eden Wells, the MDHHS chief medical executive, said the consultations were intended to address parents’ valid concerns.

"Things had to adapt for a while, you know, once this rule went into effect," she said. "But these weren't lectures."

The new law was in response to Michigan’s notably high vaccination waiver rate – the state was sixth in the country in 2014. This year the kindergarten waiver rate is 3.32%, down from 5.18%, and the seventh-grade rate is 2.78%, down from 4.55%.

Wells said it’s unlikely the consultation changed many minds, particularly not of those who are strictly anti-vaccination. However, requiring parents to visit a health services center helped by simply getting them to a location that offers vaccinations, whereas under the previous law parents could simply fill out the waiver at school and not make the trip.

Mary Wisinski is the supervisor of the Kent County Health Department’s immunization program. She said nurses are not instructed to try and change anyone’s mind, but rather to provide information.

"Our main message is 'Here's the information, do you want to talk about this, what are your questions,' and it's absolutely not about making them vaccinate their kids. That's their decision," she said.

Many parents come to the meetings angry and hostile, she said, but often will leave with a better perspective. Wisinski added that health care specialists will address each parent’s individual concern, be it over vaccine safety, the ingredients of the shot, or issues over giving all shots at once.

Across the board, Wisinski said, a common grievance of parents is being told how to care for their child.

"The biggest thing is, 'They’re my kids, big government can’t tell me what to do,' " she said. "It has nothing to do with whether they think vaccines are safe."

State-issued pointers remind health care professionals to be respectful of people’s views and mindful of possible religious exemptions, while also providing answers to possible concerns.

Wells said she hopes waiver numbers continue to decline, emphasizing the health benefits of vaccinations. She added that it’s difficult to observe the effects of the trend in relationship to the number of flu cases, vaccinations help protect against potential disease outbreaks.

In recent years there have been outbreaks of diseases like measles, including incidents at Disneyland in California last year, and diagnosed cases in Michigan’s Oakland County. Wisinski said cases like these probably brought the issue “closer to home” for many parents, and encouraged them to seek more information.

Lead Poisoning in Other Parts of Michigan Is Even Worse Than It Is in Flint
Mic – January 28, 2016, By Zak Cheney-Rice

The water crisis in Flint has whipped America into a state of righteous outrage, but dear God, look at the rest of Michigan: In at least 30 zip codes in more than 13 cities across the state, elevated levels of lead have been detected in a shocking percentage of local children — sometimes at almost five times the rate of kids in Flint, according to the [Center for Michigan](#), a [think-tank](#).

The numbers add a grim layer to an already-devastating story. While Flint struggles to recover, as many as 20% of kids under 6 years old tested in parts of Detroit — and between 7% and 12% in parts of Saginaw, Ludington, Lansing, Highland Park, Grand Rapids, Hamtramck and a handful of other cities in the state — had elevated levels of lead in their blood as recently as 2013, according to the [Michigan Department of Health and Human Services](#).

The percentage of children in Flint who had comparable levels peaked at 6.4% at the end of 2015, *Mother Jones* [reports](#).

Lead poisoning is irreversible and causes a host of developmental problems in kids. These include poor motor skills, learning delays, difficulty articulating speech and problems controlling behavior. While the extreme government neglect and deceit in Flint made what's happening there its own unique horror story — residents have been exposed to toxic drinking water for more than a year — statistics from across the state reveal lead poisoning is hardly an isolated issue.

The reasons for exposure in Michigan differ from place to place. Whereas in Flint the lead comes from old and corroding water pipes, the culprit in most other areas in the state is much more common: paint. In 1977, the U.S. Consumer Product Safety Commission [outlawed](#) the use of lead-based paint on toys, furniture and other products, including house paint. But many homes built before then are still coated with the stuff. And as time passes and the paint chips and peels, the dust it kicks up is inhaled by the people around it, poisoning them.

The result is a crisis the state of Michigan has spent millions of dollars trying to solve. Believe it or not, their methods — including varying approaches to [lead abatement](#) — have led to a [significant drop](#) in lead levels in children's blood across the state over the last few years, according to the [Center of Michigan](#).

But things are still bad. The cities where lead poisoning remains the most common vary in terms of their demographic makeup — some, like [Detroit](#) and [Highland Park](#), are overwhelmingly black; others, like [Lansing](#) and [Grand Rapids](#), are majority white — but most, unsurprisingly, have poverty rates well above the state and national averages.

And as Gov. Rick Snyder scrambles to clean up his mess, it's worth remembering the problem is much bigger than Flint. The children of Michigan — and in other parts of the country — remain among its biggest casualties.

Immunization waiver rates drop in Michigan

WLNS – January 28, 2016

LANSING, MI (WLNS) – Michigan's vaccination exemption policy has really reduced the number of school children opting out of getting shots.

Monica Fochtman is a mother of two, and she says when parents don't vaccinate their children, it can affect those who can't be immunized.

Fochtman's son, Luke, was diagnosed with cancer in 2008. Chemotherapy wiped out his immune system, and he couldn't get the vaccinations he needed.

"He was fighting hard enough to beat cancer, and the thought that he could have contracted something preventable is incredibly scary to us," Fochtman said.

But now things aren't so scary.

The Michigan Department of Health and Human Services says immunization exemption rates fell nearly 40 percent in 2015.

Officials say it's because of a year-old rule that requires parents wanting non-medical immunization waivers to talk with local health departments.

Ingham County Health Officer Linda Vail says it's having an impact.

"It's a very good step forward," Vail said. "I mean we've had 8,000 more children immunized in, in the state immunized. You know, that's a, that's a significant number."

Officials say the waiver rates here in Ingham County are down by 30 percent, which family physicians say is great for children and their families.

But recent legislation is trying to repeal the waiver policy. Representative Tom Hooker says the new requirement is a hassle.

"I don't think it's a good thing to change what we've been doing for 40 years, and then make it more difficult for a person to obtain a waiver," Hooker said.

Fochtman says the proposal is a step backward.

"The progress that this education has made is incredible exciting, um, and beneficial," Fochtman said. "It's beneficial to kids like our son, and to communities."

Fochtman's son is healthy today, and she's hoping the same for all kids in Michigan.

Hooker says he expects the legislation to be discussed soon, but health officials are hoping it does not pass.

<http://wlns.com/2016/01/28/immunization-waiver-rates-drop-in-michigan/>

Grand Traverse Health Officials React to Vaccination Wavier Decrease

9 & 10 News – January 28, 2016, By Caroline Powers

The vaccination debate continues with two new bills introduced in Lansing that could repeal current laws about vaccine waivers.

The Michigan Department of Health and Human Services says fewer parents are getting waivers.

The rate of kids opting out of vaccines dropped more than 39% in 2015, but House Bills 5126 and 5127 introduced by Representative Tom Hooker could change that.

"What changed in January of 2015 is now have to come to the health department for an educational presentation about the importance of immunizations, the possibility of exclusion from school in the event of outbreaks that occur," says Dr. Michael Collins, medical director at the Grand Traverse County Health Department.

Going back to the old ways is something Missy Smith fears.

"I don't always think parents in a school community understand the roots of their decisions and how it effects people who are connected to the school," Smith says. "I think it's important for people to be educated about their decisions. I don't want to see parents making uninformed decisions that jeopardize the health of a greater population."

Doctor Chris Moran at Whole Health Traverse City says vaccination decision should be left up to the parents, and not the government.

"We have the right to medicate our kids or not medicate our kids and to make those healthcare decisions," Dr. Moran says. "So you take that away from the parents and you start forcing people or coercing them with scare tactics to make them do what someone wants you do to and I think that's where a problem could lie."

But some people want to continue to see the waiver rates go down.

"We're just hoping that our officials understand and support the instituted legislation and continue to support the immunization of children," Smith says.

Ludington Lead Levels High in Children in Recent Report

9 & 10 News – January 28, 2016, By Cody Boyer

Problems with lead are causing concern in other parts of Michigan.

A report of high blood-lead levels in children in Mason County -- including Ludington and other nearby townships has people concerned.

9&10's Cody Boyer and photojournalist Jeff Blakeman met with the city and Health Department about the lead levels.

The Health Department says higher levels of lead popping up in the Ludington area are caused by a variety of factors.

The city wants to make it thing clear: water is *not one of them.

"We are required to test it for a variety of different chemicals," says John Shay, Ludington City Manager. "Our last three rounds of testing show no lead in the water."

Multiple tests, each three years apart, all showing little to no trace of lead in Ludington's water.

City Manager John Shay says water purity is essential.

"We do 20 to 22 samples throughout the water system and we send those samples to a laboratory in the Grand Rapids area," Shay says. "They report the results back, which have been zero and we send that on to the DEQ."

Both the city and the District #10 Health Department agree the problem is real.

"We indeed do have children with high blood-lead levels within Northern Michigan," says Tom Reichard, Environmental Health Director at District #10.

Reichard says the problem is crumbling paint on Mason County's old buildings...

...and old plumbing.

"If you are living in a fairly new home, meaning one that's 35 years or less, you probably don't have much of a concern," Reichard says. "If you live in an older farm house or an older home, your internal plumbing in that house may be in question."

The city also agrees.

"Probably the two most likely causes are lead-based paint in older homes and there are a lot of older homes in this area, as well as possibly some lead residue in the soil," Shay says.

Shay says other, older homes outside of the city should also consider testing...

"Ludington is a very small part of that zip code," Shay says. "That zip encompasses a much larger area than simply the city of Ludington. Pere Marquette Township, Hamlin Township, portions of Victory Township, Summit Township, some of the rural townships are also within that zip code."

The city manager says the focus will stay on keeping water clean.

"We will not compromise safety," Shay says. "We will continue to provide safe water so people don't have to worry about the water they get from the city of Ludington."

The Health Department has sample bottles for you if you want to check your water.

Bottles cost 18 dollars at the department.

"Lead, as a whole, is neurological disorders," Reichard says. "It tends to affect the central nervous system. Unless you have some super high levels, typically, it's not an immediate result. Lead typically has a more chronic or more long term effect. The more you are exposed to it, the more serious the effect. Certainly, learning disabilities have been a major factor for children."

Reichard says the Michigan Department of Human Services and the Women's, Infants and Children (WIC) program are good places to go to for more information. You can also find totals of cases confirmed in certain areas.

<http://www.9and10news.com/story/31085600/ludington-lead-levels-high-in-children-in-recent-report>

Mich. vaccination waivers down 39% under new policy

WZZM 13 – January 28, 2016, By Valerie Lego

GRAND RAPIDS, Mich. (WZZM) -- New numbers out Thursday show Michigan is improving when it comes to vaccination rates.

Last January, a new policy from the Michigan Department of Health and Human Services started requiring parents to get vaccination waivers from a health care worker or the county health department instead of their child's school.

This requirement included one-on-one counseling about vaccinations.

Jack Langbow looks like a typical, healthy 13-year-old -- but he's not.

"When your child is always that vulnerable child, it does make you worry," said his mother, Carrie Langbow. She said she constantly worries because her son has a compromised immune system. "School has always been a concern for us, because there are so many illnesses he can come across on a daily basis."

Illnesses that could threaten Jack's life if he were exposed to them, Carrie said. "We're always vigilant, because it could be any time that you come across that really bad infection."

Unvaccinated children pose the biggest threat to Jack and children like him.

Fortunately, Michigan's vaccination rates are on the rise because of a policy issued by the Michigan Department of Health and Human Services requiring parents to visit a health care provider or a local health department before receiving a non-medical vaccination waiver.

Kent County Health Department director Adam London is encouraged by the latest numbers, he said. "Overall, Michigan's waiver rate has been reduced by 39%."

In Kent County, vaccination waivers are down 36%, which means only 1.7% of children in Kent County are unvaccinated.

Mary Wisinski with the Kent County Health Department admits this hasn't been an easy process for parents. "We have had a lot of angry parents. They have to come to the health department now. But I can tell you by listening to my nurses many of them say, 'Wow, this was nice.'"

Under the new policy, parents still have the right not to vaccinate. Some parents are choosing that, but most are opting to vaccinate.

That is good news for Jack's mom Carrie. "These figures that are out today just send a sense of reassurance and security and let us allow him some of the daily childhood adventures that he should have," she said.

While this new vaccination waiver policy is making progress in getting more children vaccinated, there are those who aren't in agreement with it.

There are currently two bills, House Bill 5126 and House Bill 5127, which would prevent the Michigan Department of Health and Human Services from requiring parents to have counseling before signing a non-medical vaccination waiver.

<http://www.wzzm13.com/life/wellness/healthy-you/state-vaccination-rates-down-39-under-new-policy/24294001>

Senate, House unanimously approve \$28M for Flint

WZZM – January 28, 2016, By Kathleen Gray

LANSING (Detroit Free Press) — The state Senate gave quick, and unanimous, approval Thursday to give \$28 million for a variety of services needed as a result of the lead contaminated water in the city of Flint.

The House followed suit, approving the changes made by the Senate by a 106-0 vote. The bill now goes to Gov. Rick Snyder, whose office tweeted after the Senate vote: "Thank you to the Michigan Senate for taking action & for their unanimous support for the people of Flint. We will fix the crisis in Flint."

"We have to assume that it's a population-wide problem and that every single person who was ingesting this water has some form of lead in their system," said Sen. Jim Ananich, D-Flint. "We have to make sure we hold the administration accountable, and that they listen to experts so services like mobile food banks and Early On assessments are available."

The allocation of the money — but not the amount — changed a bit from the House-passed version of the bill because of the huge amount of bottled water donated to the city from all over the country. So funds initially slotted for the purchase of water have been shifted to address other needs.

Some \$1.75 million was shifted to the Michigan Department of Education for assessments of children exposed to lead; another million was moved to Genesee County for nutritional support, and \$500,000 was shifted to help provide more nursing support.

"This allows us to redirect state resources to focus on the health side of it, so if there's long term issues, we can identify that up-front," said Senate Majority Leader Arlan Meekhof, R-West Olive. "This is the first step in an emergency. Let's try to stem the tide of the problem."

Some of the other items that will get funding include:

- \$3 million to help with unpaid utility bills.
- \$500,000 for an infrastructure integrity study using outside experts.
- \$3.8 million to treat Flint children with high blood lead levels, and \$275,000 to assess whether there's a link between a spike in Legionnaires' disease cases and the lead-tainted water.
- \$1.4 million to replace plumbing fixtures in schools, child care centers, foster care and nursing homes.
- \$2 million for work being done by the Michigan National Guard.
- \$1.5 million for field operations costs for the Michigan Department of Health and Human Services.

There also was language added to the bill to make sure that every Flint child up to age 3 gets a health assessment, and that there is more opportunity for additional nurses — money for nine nurses is included in the supplemental bill — to help mothers and children. Another amendment was approved that would require the state's auditor general to audit how the money is being spent every six months.

Drinking water in Flint was contaminated with lead starting in April 2014 when the city, under the control of a state-appointed emergency manager, switched the source of supply from Lake Huron water supplied by the City of Detroit to Flint River water treated at the Flint's city treatment plant. Michigan Department of Environmental Quality officials have acknowledged they made a mistake when they failed to require needed corrosion-control chemicals to be added to the water.

As a result, lead leached from pipes and fixtures into the drinking water, and tests showed lead levels spiked in the blood of some Flint children. Although the city switched back to the Detroit water system in October, officials say the potential for harm continues because of damage done to Flint's water-distribution infrastructure.

Snyder declared a state of emergency Jan. 5 and called out the National Guard to assist with water and filter distribution Jan. 12. President Barack Obama declared a federal state of emergency, but denied Snyder's request for declaration of a federal disaster, normally reserved for natural disasters. A federal disaster declaration would make more federal funding available.

That state of emergency lasts for 28 days. The Senate and House also passed a resolution extending that emergency declaration for 73 days.

During his State of the State address last week, Snyder asked the Legislature to give quick approval to the \$28 million for Flint and noted that he will be making additional requests for funding for the city.

The supplemental request for the 2015-16 budget year is on top of \$9.35 million the Legislature appropriated in October to help Flint reconnect to the Detroit water system, which draws from Lake Huron, and pay for bottled water and other needed items.

The House is expected to give quick approval Thursday afternoon to the changes made by the Senate and send the bill to Snyder.

THANK YOU!

Fellow employees,

Each day, more than 46,000 state of Michigan employees come to work with the confidence and commitment to make Michigan a better place to live, work and play. I appreciate the way you care about the citizens we serve, and how it is reflected in the work that you do.

As you have heard from me and the media, our reputation and trust can be severely impacted when people do not make good decisions, or use good judgment in solving problems. That principle is universal, but never more so than when public health is at stake. What happened in Flint can never be allowed to happen again anywhere in our state.

I know that you want to work in a place where employee input is valued, efforts are recognized, and teams are always striving for continuous improvement. That's why we introduced employee surveys, Bureaucracy Busters and other reinvention initiatives. We want and deserve a culture of innovation, continuous improvement and employee engagement at every level. We can never take for granted how important the people are who depend on us to do our jobs, and I am asking you not to let the situation in Flint negatively impact your motivation to excel every day.

Many of you have taken an interest in helping the citizens of Flint on your own time, and I'd like to take this opportunity to recognize and thank those who have volunteered over the last couple of weekends. You have worked tirelessly to deliver cases of bottled water, water filters, replacement cartridges and water testing kits to the families in need. I appreciate you donating your time to help our fellow Michiganders. To date, more than 37,000 homes have been visited by one of our water resource teams.

For employees who would like to further help the people of Flint, please visit www.HelpForFlint.com to learn how you can do so. For additional information and to sign up for daily updates, please visit www.mi.gov/FlintWater. I am committed to ensuring that all residents have access to safe and clean water.

Again, I'd like to express my gratitude for the work you do every day to continuously improve our state and earn the trust of those you serve. You make a real difference.

Thanks,

Subject: Spending for Flint

SMT,

The ongoing crisis in Flint has necessitated many areas of DTMB to react quickly to assist with the relief efforts. To make sure that all spending is accurately accounted for and properly approved, I want to remind you that all purchases and staff overtime for the Flint emergency must first be approved by DTMB SEOC Coordinators Chris Christensen or Jeanette Doll.

If this process is not followed, it is highly likely that expenditures will not be eligible for reimbursement.

Please be sure to share this message with any relevant staff.

Thanks.

Brom Stibitz

CNN host grills MI governor on Flint water crisis

Cinema Blaze – January 29, 2016, By Curtis Figueroa

Two-thirds of that funding would go toward a joint federal-state effort to replace the water infrastructure, which has become badly corroded since a state-mandated change to Flint's water source, sending reading of waterborne lead to hazardous levels.

"The sampling protocol that Flint used is to this day keeping it in compliance with the lead and copper rule, despite all the problems that we now know about", Lambrinidou says. He's studied the issue for 28 years and works with rural residents to test their well supplies and to treat lead and other problems.

Many people in Flint have already stopped paying their water bills, either because they can't drink the lead-tainted water or they can't afford the high water and sewer rates.

The document was obtained by Progress Michigan, a liberal group that demands accountability from state and city officials. "Because most of the time, they're absolutely correct", he said.

Within days of the switch, complaints of a foul odor from residential taps rose with pediatricians reporting elevated levels of lead in their patients. In Washington County, 9 of the 19 children tested were found to have high lead levels while in Westmoreland County, 12 of the 37 children tested were found with positive lead results.

For those who choose to stay in Flint, FEMA must create a temporary water system in each home. "It's not going away", Dr. Eden Wells, chief medical executive of the state's department of Health and Human Services told reporters.

Flint Mayor Karen Weaver told MSNBC on Wednesday morning that pipe replacement is "the first thing" the government needs to address. "We've got to take action where we can".

Shannon Nobles of Lansing, Michigan, joined the crowd outside the Michigan State Capitol on Tuesday to stand in support with residents of Flint.

But state regulators don't have jurisdiction over private wells in Pennsylvania. The pastor said Care to Share assists people within the Colorado Springs community in many different ways and is funded by a set percentage of the church's annual budget. The largest allotment - \$4.6 million - is for bottled water, filters and replacement cartridges being distributed to residents in the city of almost 100,000 people. Michael Moore is speaking out about the current bottled water donations, warning of a whole new environmental disaster if trucking in water is the government solution to the lead-poisoned local drinking water.

The Michigan Legislature is poised to approve \$28 million in additional funding to address the lead contamination of Flint's water.

Inspections in 2014 also revealed that 121 systems had violated rules related to follow-up or routine monitoring and reporting.

Even replacing the lines can be trouble, however, as the law only requires replacing the lines on public property - replacing the portion of a lead service line on private property is up to the owner - and it turns out that replacing just the public portion of a lead service line can cause lead levels to spike in a homeowner's water.

The Ongoing Water Crisis in Flint, Michigan

JD Supra – January 29, 2016, By Taylor & Hammel

Last week, citizens of Flint, Michigan filed two class-action lawsuits against Gov. Rick Snyder, Michigan Department of Health & Human Services, Michigan Department of Environmental Quality, and other government officials. These follow a declared state of emergency in Flint, a pending investigation from the U.S. attorney's office for the Eastern District of Michigan, a declared federal emergency by President Obama, and an emergency order issued from the EPA to the state of Michigan.

For those not familiar with the unfolding crisis, let us recap. Elevated levels of lead have been found to be present in Flint's drinking water. The crisis began almost two years ago. In April 2014, as part of a cost-saving effort, Flint switched its water supply from Lake Huron via Detroit's water system to the Flint River. Residents immediately began complaining about the water's smell and taste, citing rashes, hair loss, and other health problems attributed to the water. Michigan's Department of Environmental Quality repeatedly said that the water was safe, but outside researchers at Virginia Tech found extremely high levels of lead in the water of several homes.

In October 2015, city officials publicly acknowledged that there was indeed a problem. As a result of mounting evidence and increasing public pressure, the city switched back to its original water supply. Remedial efforts are now underway, but this is just the beginning. State and federal emergency funding will focus on short-term, immediate solutions, such as providing bottled water, filters, and testing kits to residents. Long term solutions will have to focus on cleaning up Flint's water, upgrading infrastructure to replace lead pipes, and most importantly, addressing the long-term health implications of dangerous lead exposure.

Though action is now being taken over a year and a half after the crisis began, the effects of this man-made disaster can last a lifetime, especially among children. This current crisis, as well as the emerging investigation in Sebring, Ohio, is a painful reminder of the history of lead contamination in America.

To fully understand the crisis in Flint, government, environmental, and public health officials, as well as attorneys from both sides would do well to incorporate historical research into their investigations. This is often a critical component

that helps our legal clients build their environmental and toxic tort cases. In addition to identifying responsible and potentially responsible parties (PRPs), historical researchers are typically asked to unearth federal, state, and local records that detail the extent of each PRPs involvement. Such records also help to determine the magnitude of accountability that each PRP must have in remedial efforts.

Though the Flint water crisis is unique, it is not singular. Several other stories concerning contaminated waterways have gained national media attention in recent years. Last August, the EPA inadvertently released an estimated three million tons of toxic wastewater into the Animas River. In the last 150 years, large quantities of polychlorinated biphenyls (PCBs), methyl tertiary butyl ether (MTBE), chlorinated solvents, perchlorates, byproducts of old manufactured gas plants (MGPs), and other chemicals, oils, and wastes have been released into America's waterways. We at Taylor & Hammel closely follow and report on such toxic contamination incidents to highlight how historical research supports the toxic tort and environmental cases of our legal clientele involved in cleanup and remedial efforts.

MSHDA Board commits \$2.75 million to homeless veteran housing

Real Estate Rama – January 29, 2016

LANSING, Mich. – January 29, 2015 – (RealEstateRama) — The Michigan State Housing Development Authority Board approved two grants today aimed at reducing veteran homelessness significantly in 2016.

The board OK'd a \$2 million Housing Development Fund (HDF) grant to the Michigan Veterans Foundation. The funds would support the construction of a new 44,000 square foot building that will house the Detroit Veteran's Center and deliver services to more than 1,200 veterans each year.

"We want to help put a roof over the head of every homeless veteran," said Kelly Rose, MSHDA's director of Rental Assistance and Homeless Solutions.

The site, at the corner of Forest and Rosa Parks Boulevard, presents an ideal location. It is accessible by public transportation routes needed by the MVF clients and close to existing employers, the Dingell VA Medical Center and other homeless veteran service providers.

The center will provide, among other opportunities, the following services for homeless and low-income veterans in Detroit and southeast Michigan:

Transitional living facilities for 100 to 150 veterans

Social services

Education and employment support

Job training and employment placement

Health care

MSHDA Executive Director Kevin Elsenheimer said "the project speaks strongly to MSHDA's primary statutory purpose of homeless prevention and housing development and approving it is the right thing to do."

The total project cost is estimated at \$14 million. MSHDA funding is contingent on the developer securing sufficient operating revenues and community support.

The Authority Board also approved a \$750,000 Housing Development Fund grant that provides rental assistance for up to six months to veterans experiencing homelessness. Funds will go to statewide Supportive Services for Veteran Families grantees and Housing Assessment and Resource Agencies (HARA). Veterans who access that support will be linked to services and assisted in finding resources—either employment or entitlement benefits—to help them maintain their housing.

During 2015, homeless service providers across the state provided housing for approximately 80 percent of veterans experiencing homelessness. The requested additional funding will provide housing for 200 more veterans.

Coupled with the funding, the Authority will develop a strategy with the Michigan Veterans Affairs Agency (MVAA) and Michigan Department of Health and Human Services (DHHS) to increase coordination of resources so that all veterans experiencing homelessness will be offered housing. It's a strategy that will include involvement of local leaders and elected officials, additional coordination between federal, state and local homeless service providers and increased assistance to Continuums of Care (CoC) in developing local strategies to overcoming veterans' barriers to housing.

MSHDA helped 3,200 homeless veterans find permanent or transitional housing in FY 2014-15. That left 1,200 homeless veterans whose needs were not met.

Opening doors to housing for veterans frees these individuals up to tackle other challenges they may be facing, such as education, employment or healthcare.

"We can do better, and this investment shows our commitment to doing better for our men and women in uniform," said Steve Arwood, MSHDA Board chairman. "Government and faith-based organizations alone cannot end homelessness though. This needs to be a public, private effort. I see an opportunity for businesses to step up and give veterans living in poverty and homelessness a chance to interview for jobs, which will help them integrate back into the mainstream work force."

In January 2015, Gov. Rick Snyder created the Michigan Interagency Council on Homelessness to design, develop, adopt and update a plan to end homelessness. Rose, who serves as the Council chair, said today's funding helps the group get one step closer to reaching that goal.

"When these dollars are combined with our efforts and those of our strong partners at the MVAA, DHHS, and in coordination with the State Interagency Council on Homelessness, we can see that housing every homeless veteran is possible. We are committed to working in lock-step until that happens," she said.

Rose added that the work being done to house all veterans will help the Authority and partnering nonprofit service providers develop a model that can be replicated to rapidly re-house all homeless populations, such as chronic and family homelessness.

The Michigan State Housing Development Authority (MSHDA) provides financial and technical assistance through public and private partnerships to create and preserve decent, affordable housing for low- and moderate-income residents and to engage in community economic development activities to revitalize urban and rural communities.*

*MSHDA's loans and operating expenses are financed through the sale of tax-exempt and taxable bonds as well as notes to private investors, not from state tax revenues. Proceeds are loaned at below-market interest rates to developers of rental housing, and help fund mortgages and home improvement loans. MSHDA also administers several federal housing programs. For more information, visit www.michigan.gov/mshda.

Michigan Cities Test Positive For High Levels Of Lead In Children

New Pittsburgh Courier – January 29, 2016, By Desire Thompson

Researchers from the Michigan Department of Health and Human Services, as well as teachers and parents, are speaking out about the state's history of infecting children with lead – long before the Flint water crisis.

In an investigative report from **The Detroit News**, cities throughout the state such as Grand Rapids, Jackson, Detroit, Saginaw, Muskegon, and Holland have seen higher cases of lead in children as far back as 2013. State-funded health programs have been implemented over the years, but little action or attention was given until Flint's water crisis gained media attention last month.

Via **The Detroit News**:

In 2013, lead levels sank to 3.9 percent and fell again to 3.5 percent in 2014. But that is still 5,053 children under age 6 who tested positive in 2014. Each had lead levels above 5 micrograms per deciliter. (Though no amount is considered safe, 5 micrograms is the threshold that experts say constitutes a "much higher" level than most children.)

Flint's unfolding water crisis once again brought to the fore a danger long known to rob children of cognitive and physiological function and impulse control. High levels of lead found in students in the Detroit Public Schools system have been linked to that city's notoriously low test scores.

In the 48206 ZIP code on the west side of Detroit, 20.8 percent of the 701 children tested had elevated levels in 2013, and 20.3 percent in 2014, the most recent year tested.

Paul Haan of **Healthy Homes Coalition of West Michigan**, a group designed to help ensure wellness in harmful housing conditions, said children are often the victims of cities' mistakes. More often than not, little is done until the damage is detected in kids.

"The problem is," Haan said, "we're still using kids as lead detectors."

Because of the well-documented dangers of lead, pediatricians are constantly testing children. "And every week there are more kids on" a weekly statewide report on elevated lead levels, Haan added. Parts of Grand Rapids have some of the highest concentrations of children with lead, he said.

As efforts to help the residents of Flint continue, Gov. **Rick Snyder** said he doesn't plan to replace the lead pipes in the town anytime soon.

New reports also refute Snyder's claims regarding when he was aware of the city's water problem. **ThinkProgress** reports the Michigan Department of Technology, Management & Budget issued new water coolers to state buildings in Flint due to suspicions about the water supply back in January 2015.

Federal government denies request to extend WIC benefits to older Flint kids

MLive – January 30, 2016, By Amanda Emery

FLINT, MI -- The federal government has denied a request from the state that would use supplemental nutrition funding for Flint children who may have been affected by high levels of lead in the water.

On Jan. 27, the Michigan Department of Health and Human Services requested Food and Nutrition Service approval to expand the access and availability of WIC benefits and services to children ages 5-years old through 10-years-old.

MDHHS requested the supplemental nutrition funding based on the Flint water crisis and to help fight lead exposure with nutrition.

On Friday, Jan. 29, the United States Department of Agriculture' Food and Nutrition Services (FNS) denied the request stating the federal statute governing Women, Infants, and Children (WIC) limits eligibility to children up to the age of 5-years-old, according to a letter sent to MDHHS from the USDA.

"Thus, due to limitations established by statute, we are unable to approve your request. Any changes to WIC eligibility requirements would require Congressional action." The letter states.

Gov. Rick Snyder is urging the federal government to reconsider the request given the current Flint water crisis.

"I have strongly and continually stated that it is essential for all levels of government to work together to help Flint recover from this crisis, as it was all levels of government that failed Flint. While I understand WIC funding does not normally cover children over the age of 5, the improved health and development growth that will come from better nutrition for these kids necessitates a waiver of this rule." Snyder said in a statement. "I strongly urge the federal government to reconsider this request and provide additional support for children ages 5 to 10. We must draw on all resources possible and work cooperatively to meet the needs of the residents of Flint, both immediate and long-term."

The FNS stated in the letter it is dedicated to supporting the nutrition of Flint's older children through other existing federal programs that include the National School Lunch Program, The Emergency Food Assistance Program, and The Child and Adult Care Food Program.

The FNS is working with the Michigan Department of Education to respond to the needs of kids in Flint, according to the letter.

Michigan wants health departments to consider collaborations

Up North Live – January 30, 2016, by Associated Press

WPBN/WGTU — LANSING, Mich. (AP) - The Michigan Department of Health and Human Services is asking local health departments across the state to consider sharing services and other ways of collaborating.

The department is asking health departments for proposals that would boost links among counties and health department districts. An estimated \$300,000 is available for up to 10 collaborative efforts and awards may range from \$10,000 to \$75,000.

The department says so-called cross jurisdictional sharing is an important idea in the future of health care in Michigan and across the U.S.

Applicants must be a single existing local health department in Michigan applying in partnership with one or more other local health departments. Proposals are due Feb. 22.

<http://upnorthlive.com/news/local/michigan-wants-health-departments-to-consider-collaborations>

Our View: Fewer vaccination waivers good news in Lenawee County

Lenconnect – January 31, 2016

ADRIAN

When Michigan last year enacted a new rule to reduce unnecessary waivers from childhood vaccinations, we said it was a sensible step. Based on data released this week by the Michigan Department of Health and Human Services, it also appears to be a success — both statewide and here in Lenawee County.

Preliminary figures show the percentage of Michigan children not being vaccinated due to waivers has dropped 39 percent from 2014 to 2015. Lenawee County's decline was 23.3 percent, from 210 students opting out to 161.

That's all been accomplished without any reports of white-coated vaccine squads terrorizing families or otherwise coercing anyone seeking to opt-out of such immunizations.

Michigan has been plagued by outbreaks of measles, chicken pox and pertussis ("whooping cough") that in recent years forced temporary closure of some affected schools. Most of those were in areas around Traverse City, where it likely was no coincidence that students have high percentages of vaccination waivers.

Some children do need to waive certain vaccines due to medical conditions. A few may be members of religions that prohibit vaccinations. That's understandable, yet that makes it even more important that other children who can be vaccinated do so in part to limit exposure suffered by those who cannot.

We've long suspected that Michigan's high rate of unvaccinated children — one of the highest in the nation — was due more to parental indifference than to any deeply held medical or religious beliefs. That seems to be supported by last year's major rate decline after a fairly minor new HHS rule. Instead of merely signing the waiver form themselves, a parent now has the health department sign the waiver after a brief informational presentation.

Lenawee County can still improve. The county's new 4.3 percent waiver rate remains one of the higher ones within the state, well above the new state rate of 2.8 percent. But last year's decline is indisputable good news, and it would be a mistake to undo it.

Michigan recognizes National Birth Defects Prevention Month

Midland Daily News – January 31, 2016

Every 4 1/2 minutes a baby is born with a birth defect in the United States. While not all birth defects can be prevented, women can increase their chances of having a healthy baby by managing health conditions and adopting healthy behaviors before becoming pregnant, the Michigan Department of Health and Human Services states.

In recognition of January as National Birth Defects Prevention Month, MDHHS is encouraging health care professionals, educators, social service professionals and the general public to support this effort.

Further, is joining national partners to invite women and their families to make a PACT for birth defects prevention.

The PACT is a resolution to:

- Plan ahead
- Avoid harmful substances
- Choose a healthy lifestyle
- Talk to your healthcare provider.

By making the PACT, women can reduce the risk of having a child with a birth defect as well as their risk of pregnancy complications such as early pregnancy loss, prematurity and stillbirths, MDHHS stated.

It said diet, life-style choices, factors in the environment, health conditions and medications before and during pregnancy all can play a role in preventing or increasing the risk of birth defects.

"Small steps, like making healthy choices, visiting a healthcare provider well before pregnancy, controlling your weight through healthy diet and activity, and taking a multivitamin every day, can go a long way," said Dr. Eden Wells, chief medical executive for MDHHS.

Among the 114,000 live births in Michigan each year, about one in every 33 is diagnosed with a birth defect. Not only can birth defects lead to lifelong challenges and disability, they are also the most common cause of death in the first year of life and the second most common cause of death in children aged one to four years, the MDHHS state.

It said public awareness, expert medical care, accurate and early diagnosis, and social support systems are all essential for optimal prevention and treatment of these all-too-common and sometimes deadly conditions.

MDHHS joins the National Birth Defects Prevention Network and the U.S. Centers for Disease Control and Prevention to raise awareness on the importance of Making a PACT for Prevention.

They encourage people to share their own tips for healthy pregnancy using #LivingMyPACT on social media.

http://www.ourmidland.com/news/michigan-recognizes-national-birth-defects-prevention-month/article_e5ef3187-9cbc-5fa4-a082-6bab07b329e3.html

Look up number of toddlers with elevated lead levels in your Michigan county

MLive – February 1, 2016, By Julie Mack

Long before the water crisis in Flint hit the headlines, lead toxicity in young children had been an issue for Michigan public-health officials.

Lead testing is recommended for 1- and 2-year-olds, and about a third of Michigan children in that age group were tested in 2014, according to data from the Michigan Department of Health and Human Services.

[Click Here](#) for access to Database: Lead toxicity in toddlers by county

Of the 84,776 1- and 2-year-olds tested in 2014, 3,141 — or 3.6 percent — had elevated levels of lead in their blood, based on a standard 5 micrograms per deciliter or ug/dL, the current benchmark set by the federal Centers for Disease Control as a cause for concern.

About half of those children — 1,533 — showed elevated levels in a second blood test within 12 weeks of the first.

Statewide, children on Medicaid comprised 72 percent of those tested and 85 percent with elevated lead levels.

In all, 77 of the state's 83 counties had had least one toddler in 2014 with an elevated lead level in his or her blood.

To compare counties across the state, click on "all counties" when doing the search.

If you need help in using the database, post your question in the comment section below or email jmack1@mlive.com.

Snyder tells state workers 'never again' on Flint

The Detroit News – February 1, 2016, By Jonathan Oosting

Lansing — Gov. Rick Snyder, who has criticized some environmental department workers for failing to use “common sense” in the run-up to the Flint water crisis, sent a Friday email to some 46,000 state employees telling them what happened there cannot happen again.

“As you have heard from me and the media, our reputation and trust can be severely impacted when people do not make good decisions, or use good judgment in solving problems,” Snyder wrote. “That principle is universal, but never more so than when public health is at stake. What happened in Flint can never be allowed to happen again anywhere in our state.”

The Republican governor, in his letter, also told employees the state values their input and highlighted programs like “Bureaucracy Busters,” which awards workers who come up with ways to enhance government efficiency or services.

“We want and deserve a culture of innovation, continuous improvement and employee engagement at every level,” Snyder wrote. “We can never take for granted how important the people are who depend on us to do our jobs, and I am asking you not to let the situation in Flint negatively impact your motivation to excel every day.”

Spokesman Dave Murray confirmed that Snyder sent the letter to state employees. He noted that the governor has also highlighted “missteps” at the city and federal level that factored into the Flint water crisis.

Snyder also used the letter to recognize and thank state employees who have volunteered in Flint over recent weekends, and he shared information about additional opportunities. The governor “wanted people to know their efforts are appreciated,” Murray said.

Snyder continues to face criticism over the state’s initially slow response to the Flint water crisis and the role it played in the contamination. The governor has taken responsibility for Flint and vowed to fix it, but he’s also criticized Department of Environmental Quality employees for failing to ensure corrosion controls were added when Flint began using river water in April 2014.

The harsh river water damaged aging pipes and leached lead into the city’s drinking water supply. The city switched back to Detroit’s Lake Huron water supply in October but residents are still relying on bottled and filtered water.

Environmental Director Dan Wyant resigned in late December, and the state recently suspended two other department employees. They could be fired pending further investigation.

“A number of changes have been made at the DEQ and we are moving forward, focused on protecting the health and safety of Flint residents,” Murray said.

Ray Holman of the United Auto Workers Local 6000, which represents more than 14,000 state employees, responded to the letter by saying workers have to be empowered to make good decisions and raise flags when there are mistakes. And that hasn’t always happened in state government, before or since Snyder took office, Holman said.

“They should be listened to. I think it’s a little disingenuous to blame state employees for not speaking out when there’s this intimidation factor that a lot of employees complain about,” he said.

The Department of Environmental Quality is now working on a five-point plan to establish baseline data that will help experts determine when Flint tap water may again be safe to drink. That process could take two or three months, Snyder said last week.

To date, the state has tested water at 4,924 residential homes, according to the latest data. Of those, 4,616 tested at or below the federal action limit of 15 ppb lead, while 37 tested over 150 ppb, which is higher than some filters can handle.

The long-term strategy includes more water testing in residential homes, schools, restaurants and the water distribution system, along with blood lead level testing of children in cooperation with the Michigan Department of Health and Human Services.

DHHS provides list of steps being taken in Flint water crisis

MLive – January 31, 2016, By Roberto Acosta

FLINT, MI – The federal government issued a laundry list of items that have taken place since President Barack Obama signed an emergency declaration earlier this month in response to Flint's water crisis.

The declaration approved on Jan. 16 opened the way for \$5 million in aid, with a 25 percent match required by the state, as well as oversight by the U.S. Department of Homeland Security and FEMA, with any additional funding requiring the approval of Congress.

"Obviously we are concerned about the levels of lead found in the Flint water supply and the potential impact on the health and safety of the community," said Dr. Nicole Lurie, U.S. Department of Health and Human Services (HHS) Assistant Secretary for Preparedness, in a statement.

Lurie is coordinating the federal government's assistance in response and recovery efforts in Flint after high amounts of lead were found in tests.

The federal government has declined a disaster declaration in Flint, as well as turning down a request for supplemental nutrition funding for children over 5 years old.

"We are drawing on programs and expertise from across the federal government to help the city and state find a solution the people of Flint can count on so that the community can begin to recover," said Lurie.

Items the DHHS said have been accomplished in Flint include the following to try and ensure a safe water supply for residents:

- The Environmental Protection Agency (EPA) is working with state and local officials to conduct water testing and to reduce lead levels in tap water and provide safe drinking water to the residents of Flint.
- EPA teams are collecting drinking water samples from Flint homeowners to better understand how lead is behaving in the plumbing in their homes and to ensure proper corrosion control is being restored in the drinking water system in order to lower lead levels. The samples are sent to an EPA laboratory for analysis and the quality-assured results are shared with individual homeowners and posted to a publicly accessible website.
- NSF-International certified lead-removal filters are being distributed in Flint by the State of Michigan to remove lead from household water and make it safe for people to drink. These filters are certified by NSF for use with water containing lead levels up to 150 parts per billion. Residents are encouraged to have their home water tested. EPA began sampling drinking water in households with known lead levels of 100 parts per billion or higher, in order to verify the effectiveness of these filters at removing lead at high concentrations.

- EPA is also working with drinking water system operators at the City of Flint treatment plant. EPA is collecting chlorine samples at locations throughout the city system, with a focus on locations that would be the most likely to have lower chlorine levels. EPA will continue to collect samples to ensure that chlorine concentrations in the system are sufficient. EPA is posting preliminary water quality data about chlorine levels in Flint's drinking water, as well as an interactive map of sampling results in Flint. The map includes data from initial chlorine testing, and as additional and final data becomes available, EPA will post the sampling locations and data to the map. The map is available at www.epa.gov/flint. In locations where chlorine is not detected, EPA conducts follow-up testing for microbial contamination. The Centers for Disease Control (CDC) has information about chlorine and health available for the public.
- EPA is inspecting homeowner drinking water systems to determine the presence or absence of lead service lines in the water distribution system as it prepares for additional residential sampling.
- The Federal Emergency Management Agency (FEMA) is providing bottled water, water filters, filter cartridges, water test kits, and other necessary items to the state of Michigan under the emergency declaration. At the request of the State, FEMA so far has provided 1,366,614 liters of water, 102,520 water filter replacement cartridges, 5,000 23-cup filtration pitchers, 5,000 8-cup filtration pitchers, and 30,000 water filters (faucet filters) to the state for distribution to Flint residents.
- EPA is conducting an audit of the Michigan Department of Environmental Quality (MDEQ) drinking water program to examine MDEQ's implementation of the Safe Drinking Water Act and related rules on lead and copper, total coliform, nitrates and ground water.
- During the week of January 17, EPA issued a Safe Drinking Water Act Emergency Order to ensure the state and city immediately take actions necessary to protect public health. The Safe Drinking Water Act Emergency Order requires the State of Michigan and City of Flint to take a series of immediate steps to address the drinking water contamination in Flint.

In mid-October, the EPA established a Flint Safe Drinking Water Task Force comprised of EPA scientists who are internationally recognized experts in the field of lead in drinking water. The EPA Task Force is providing technical assistance to MDEQ and the City of Flint to implement corrosion control treatment and to develop school and residential sampling protocols.

Steps taken to address the near-term physical and mental health needs of children, pregnant women and families potentially impacted by lead-contaminated water include:

- The U.S. Department of Agriculture's (USDA) Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) is allowing participants to use WIC vouchers for ready-to-feed infant formula, which does not need to be mixed with water. Participants also can swap powdered formula for ready-to-feed formula. WIC participants are being referred to the local health department for lead screenings and provided nutrition education on mitigating lead absorption through dietary changes.
- On January 25, USDA approved the Michigan Department of Education's \$62,700 request in additional funds for the USDA Fresh Fruits and Vegetables Program. These funds can be used to help affected schools purchase foods high in Vitamin C. Foods high in Vitamin C are among the foods recommended by the (CDC) that may help keep lead out of the body, along with foods high in calcium and iron.
- The DHHS Office of the Assistant Secretary for Preparedness and Response is using existing resources to help state health officials identify vulnerable populations in Flint who may need further targeted outreach and assistance.

- The DHHS-funded agency on aging in Michigan is organizing local meetings and distributing water bottles and water filters to home-delivered meal recipients. The agency is coordinating with Genesee County to assist seniors who need help installing water filters.
- The DHHS Administration for Children and Families (ACF) and Health Resources and Services Administration (HRSA) are working with their grantees in the area to disseminate public health education through Head Start, Community Health Centers and other programs to help families understand the risks of lead in the water, encouraging residents to have their children screened, and assisting families in obtaining screening for their children. Medicaid regularly requires that all Medicaid-eligible children up to age 6 be tested for lead poisoning; treatment for these children is covered under Medicaid. As a diagnostic benefit, home investigations for Medicaid-eligible children also are covered under Medicaid. The state can expedite enrollment into Medicaid for eligible children in need of immediate medical attention.
- The Disaster Distress Helpline, sponsored by the DHHS Substance Abuse and Mental Health Services Administration (SAMHSA), is available to provide crisis counseling and support to people – including children and families in Flint – who are experiencing emotional distress related to natural or human-caused disasters. Residents can call (800) 985-5990 or text TalkWithUs to 66746 to connect with a trained crisis counselor.

Efforts including the following have been made to assist the state, city and residents in understanding the potential impacts lead can have on health:

- The CDC and the Agency for Toxic Substances and Disease Registry (ATSDR) is providing technical assistance to the state on lead exposure, water sampling protocols, and home inspections. CDC and ATSDR are working with the state to determine the number of children exposed to lead in Flint to ensure that children who should be screened are getting screened.
- The U.S. Food and Drug Administration's (FDA) local office assessed potential impacts on FDA-regulated industries in the Flint area, including human food and animal feed production. No impacts were found, and FDA continues to assess and monitor the situation.
- The National Institutes of Health has a long history of supporting research on lead exposure and health, including children's health. The NIH has an expedited process for reviewing research proposals and funding grants to address environmental emergencies, such as the lead-contaminated water crisis in Flint. The NIH is soliciting these research proposals now. Additionally, the new NIH Disaster Research Response initiative is working to improve research tools, protocols, and training necessary to conduct time-critical health research in response to disasters.

In regards to recovering from the economic impact of the water crisis, these steps have been taken thus far:

- The U.S. Department of Housing and Urban Development (HUD) is working closely with the city on economic development and interagency coordination and successfully assisted the city with the purchase and installation of water filters. HUD had an existing lead hazard grant to Flint, targeted to lead paint, \$325,000 of which can be used for addressing the water lead contamination.
- HUD also has provided a data tracking and reporting system for the State of Michigan to use in its lead investigations.
- In 2014, Flint was identified as one of six target cities in the second round of the Strong Cities – Strong Communities White House initiative. This program focuses on enhanced federal agency support in areas of blight reduction, public safety and economic development. Discussions are ongoing to identify opportunities for

Departmental programs and initiatives to provide resources to help address the Flint water crisis and for collaboration through existing federal engagement with city, county and state agencies.

- President Obama on January 22 also announced \$80 million available from the water infrastructure state revolving fund allocated to the State of Michigan as part of the President's enacted 2016 budget. The Administration has moved to ensure that money is available in Michigan immediately.

Residents may visit phe.gov/flint to learn more about the effects of lead, results of water testing and recovery efforts taking place in the city.

Michigan Proposes Strategy to Determine If Flint Water Safe

ABC News – February 1, 2016, By The Associated Press

The Michigan Department of Environmental Quality proposed a five-part strategy to determine whether Flint's water, which has become contaminated with lead, is safe to drink.

The state said the plan to try to ensure that drinking water no longer is tainted with lead includes residential water testing, school testing, food service and restaurant provider testing, blood testing and overall testing of Flint's water distribution system.

Flint switched its water source from Detroit's water system to the Flint River in 2014 to save money. The river water was not treated properly and lead from pipes leached into Flint homes.

DEQ Interim Director Keith Creagh told the Detroit Free Press his agency will outline plans Monday to the U.S. Environmental Protection Agency. Creagh hopes "to be able to say something about the general health of the system come mid-April."

State officials say water samples from roughly 5,000 homes have been tested, and about 94 percent have are below the "actionable level" of 15 parts per billion for lead. Still, Michigan Gov. Rick Snyder urged all residents to submit a free water test kit, which can be picked up and returned to designated Flint fire stations.

The DEQ said it's working with the state Department of Health and Human Services to make sure residents with high blood-lead levels get their water tested. Those homes are provided additional services in an effort to minimize lead exposure, the state said.

"We want to ensure that all homes are getting the proper immediate attention and the home water tests will help in that process," Snyder said late Sunday in a statement.

Snyder has accepted responsibility for the emergency while also blaming state and federal environmental regulators. Some have resigned, including the DEQ's former top official, or have been suspended.

Free nicotine replacement therapy available in February

UP Matters – January 29, 2016

LANSING, MI - The Michigan Tobacco Quitline will offer 8 weeks of free nicotine replacement therapy to anyone who calls and enrolls this February.

In Michigan, 16,200 residents die every year from smoking-related diseases. Smoking remains the leading cause of preventable death and disease in the United States.

It kills about 480,000 Americans each year. For every person who dies from a smoking-related disease, about 30 more people suffer at least one serious illness from smoking. Nearly 70 percent of smokers say they want to quit.

“As residents listen to the newest ads from the Tips campaign, we are hoping to help them quit for good by providing 8 weeks of free nicotine replacement therapy,” said Nick Lyon, Director of the Michigan Department of Health and Human Services. “Each year we help thousands of Michigan residents quit through the Quitline.

The Michigan Tobacco Quitline is open 24 hours a day, 7 days a week and can be reached at 1-800-QUIT-NOW. For more information about the campaign, visit www.cdc.gov/tips. For more information about tobacco in Michigan, visit www.michigan.gov/tobacco.

Michigan DEQ plans to deliver results for Flint

WLNS – February 1, 2016, By Joe Gebhardt

LANSING, MI (WLNS) – Today, the Michigan Department of Environmental Quality made strides in cleaning up Flint. Michigan DEQ Director Keith Creagh proposed a five part strategy to determine whether Flint’s water is safe to drink. Creagh went in front of the U.S. Environmental Protection Agency to outline his plans. The goal is to ensure lead is out of the water through detailed testing in homes, schools, food service, and blood testing.

Governor Snyder made it clear there needs to be long-term solutions in Flint. “I take full responsibility to fix the problem so it will never happen again,” said Snyder.

After tapping Keith Creagh to head the Department of Environmental Quality to oversee the Flint water crisis, it’s time to unveil the plan and get the ball rolling.

From last week's press conference, Creagh said, "we can say that things are trending better. 160 of those samples were above 15 parts per billion. So the vast majority of 93.7% were below 15 parts per billion. 85% were below 5 parts per billion."

The five part strategy was developed to encompass several parts of the state infrastructure including testing the water in homes and schools. One Flint school is having water fixtures replaced. The Department of Agriculture ensures food services are using water filters. The Department of Health and Human Services will make sure residents with high blood lead levels have water tested for lead.

The Governor sent out an e-mail to all state employees. In the letter he states, "what happened in Flint can never be allowed to happen again anywhere in our state." He then thanked the state workers for their help with Flint and then asked them to not let the situation in Flint negatively impact their motivation to work every day. Not everyone agrees with Snyder's sentiments.

UAW Local 6000 Legislative Liaison Ray Holman said, "We feel like Governor Rick Snyder is speaking out both sides of his mouth. Right now we do have a culture unfortunately of where basically people are taught to keep their heads down and not to speak out."

Creagh hopes to say something about the general health of the Flint water system sometime in April. Flint switched their system in 2014 to the Flint River. The river was not treated properly causing lead from pipes to leach into Flint homes.

Health department reports drop in vaccine waivers

C&G Newspapers – February 1, 2016, By Tiffany Esshaki

SOUTHFIELD — It's been a year since the state of Michigan enacted reforms that now require parents to meet with a health professional before they can receive a nonmedical immunization waiver for their child.

During a press conference Jan. 28 at the Oakland County Health Division's Southfield location, Oakland County Director of Human Services George Miller was pleased to report that during that first year of the reforms, Michigan's waiver rate dropped by nearly 40 percent — that's about 8,000 fewer waiver requests. During 2015, 2.8 percent of Michigan children received a nonmedical immunization waiver, compared to 4.6 percent the year prior.

In Oakland County, the number of waivers requested dropped by more than half.

The news is good to Miller and the group of doctors, municipal officials and advocates who were present at the event last week. Dr. Anthony Ognjan, an infectious disease specialist in Sterling Heights, celebrated the decline in waivers because he said young people today won't have to be subjected to diseases that were common in his generation.

"I'm what you call a baby boomer, and certainly baby boomers can attest to the benefit of vaccinations," said Ognjan. "However, today we are seemingly victims of our own vaccination success."

Dr. Irvin Kappy, vice chair of pediatrics at Henry Ford West Bloomfield Hospital, agreed with Ognjan and described a time years ago when his practice would perform a few spinal taps each week for children afflicted with meningitis — a disease that is considered preventable now with vaccination and the "herd immunity" that vaccinations provide.

But that success, the doctors said, could be stifled with the passage of House Bills 5126 and 5127. Introduced last December, the bills would do away with the vaccination waiver reforms, which were enacted by the Michigan

Department of Health and Human Services, and return to the prior rules that allowed parents to obtain waivers from their child's school.

The bills would also reverse health departments' authority to keep nonimmunized students out of class for between 21 and 40 days when a contagious disease is reported at a school in as few as just a couple of students. The prior rules would apply that would only allow schools to close or restrict students in the event of a full epidemic.

Some parents reacted strongly to that particular new rule last spring when 13 nonvaccinated students in the Birmingham Public Schools district were told to stay home for more than two weeks during an outbreak of chickenpox.

Reversing the measures would be a step backward, according to Zachary Yaksich, executive director of Alana's Foundation. It was 13 years ago that his 5-year-old daughter, Alana, passed away from complications of influenza.

"I was ignorant to the fact that influenza could take a life," said Yaksich during the press conference.

At first, Yaksich said, his daughter's only symptom was a fever of 99 degrees. After a night's rest, she felt better — she joined her siblings outside to build a snowman, and had pizza and ice cream for dinner.

She woke up later that night vomiting and had a fever of 106 degrees. Her parents rushed her to the hospital, but it was too late. The virus had quickly ravaged her brain, and doctors said there was nothing they could do to save her.

"I hope and ask the governor to reject these bills," he said.

Dr. Karen Mitchell, a family medicine doctor with St. John Providence Hospital, said Yaksich isn't the only parent unaware of how dangerous these preventable diseases can be. And with the ample amount of misinformation available on the Internet, she said she works hard to hear parents' concerns and help them wade through the facts and the fiction.

"I try to fight the false information with good information. I always recommend the Centers for Disease Control (and Prevention) website for good information on vaccines and their safety."

The side effects of vaccines, she said, are one of the most common concerns for parents she's met with seeking a waiver. She acknowledged that vaccinations can have side effects, which according to the CDC website can range from redness and swelling at the injection site, to rashes and mild fever, to more serious reactions caused by allergies.

"But some parents are concerned about the risk of the vaccine causing the illness itself or the vaccine causing autism," she said. "I've been working with vaccines for a long time, and I am convinced they are safe. I also know the potential risks and side effects. The risk of autism has been thoroughly studied and disproven. While I care a lot about autism and I look for it every day, the risk of vaccines causing autism has been about as disproven as it is possible for it to be disproven."

Whatever the reason a parent has to request a vaccination waiver for their child — which could also include religious considerations — that reason should be good enough, according to Rep. Tom Hooker, R-Byron Center. He's sponsoring House Bills 5126 and 5127, and prepared a statement on his web page defending his motivation after the announcement was made that waiver rates had dropped.

"This legislation is not an attack on the Department of Health and Human Services. We are simply seeking to return to the DHHS policy that has existed for the last 40 years," said Hooker in the statement.

He argued that the DHHS does not have the legal authority to pass the waiver requirements, and added that waiver rates were already on the decline before the new rules.

“Waiver rates have actually plummeted over 50 percent since 2010, before the DHHS administrative rule was implemented,” he said in the statement. “For example, waiver rates for seventh-grade students fell almost 40 percent between 2013 and 2014 without an additional education requirement from the local health authorities.”

Miller said he expects the House bills to be discussed in the Legislature soon.

Michigan Undertaking Plan To Determine If Flint Water Is Safe

CBS Detroit – February 2, 2016

FLINT (AP) – The Michigan Department of Environmental Quality has undertaken a five-part strategy to determine whether Flint’s water, which has become contaminated with lead, is safe to drink.

The state said the plan to try to ensure that drinking water no longer is tainted with lead includes residential water testing, school testing, food service and restaurant provider testing, blood testing and overall testing of Flint’s water distribution system.

Flint switched its water source from Detroit’s water system to the Flint River in 2014 to save money while under state financial management. The river water was not treated properly and lead from pipes leached into Flint homes. The city returned to Detroit’s system in October while it awaits the completion of a separate pipeline to Lake Huron this summer.

DEQ Interim Director Keith Creagh told the Detroit Free Press he hopes “to be able to say something about the general health of the system come mid-April.”

Creagh said in a release that he met Monday with an official from the U.S. Environmental Protection Agency and that staff from both agencies discussed how to work together to make the best use of data being collected.

The two sides also discussed the DEQ’s five-part strategy, Creagh said. The agencies have met regularly since early January.

“These conversations with the EPA are a critical part of our shared response to the emergency in Flint,” Creagh said. “We know that moving forward will require all levels of government — along with partners in the business and nonprofit communities and the community of Flint — to work together with the sense of urgency this crisis demands.”

State officials say water samples from roughly 5,000 homes have been tested, and about 94 percent have are below the “actionable level” of 15 parts per billion for lead. Still, Michigan Gov. Rick Snyder urged all residents to submit a free water test kit, which can be picked up and returned to designated Flint fire stations.

The DEQ said it is working with the state Department of Health and Human Services to make sure residents with high blood-lead levels get their water tested. Those homes are provided additional services in an effort to minimize lead exposure, the state said.

“We want to ensure that all homes are getting the proper immediate attention and the home water tests will help in that process,” Snyder said late Sunday in a statement.

Flint residents coping with lead contamination will be cleared to drink unfiltered water again only when outside experts determine it is safe. Those who are evaluating the water and will help verify its quality include Marc Edwards, a Virginia Tech researcher who helped expose the lead problem and is providing independent guidance to the city and state.

Snyder has accepted responsibility for the emergency while also blaming state and federal environmental regulators. Some have resigned, including the DEQ's former top official, or have been suspended.

In a letter to more than 46,000 state employees Friday, Snyder said "what happened in Flint can never be allowed to happen again anywhere in our state." He said he wants a culture where workers' "input is valued." He also thanked workers for volunteering in Flint in recent weeks.

Ray Holman, legislative liaison for the United Auto Workers Local 6000, the biggest state employee union, called Snyder's letter a "little disingenuous," saying workers often are dissuaded from "thinking outside the box" and speaking up, and have been disciplined for not closely following policy.

Meanwhile, music mogul Russell Simmons has joined many well-known entrepreneurs, artists and actors who have visited the city or pledged their support. He went door-to-door Monday delivering cases of water to residents.

The water comes from AQUAhydrate, a bottled water brand partly owned by Sean "Diddy" Combs and Mark Wahlberg that pledged to donate 1 million bottles to the city. The RushCard prepaid debit card system, of which Simmons is a founder, was part of the relief effort.

On this same topic, David and I had a conversation with the Governor's office after our post-EMT meeting this morning. They have agreed that as a general rule, before we do work on anything, it must be approved by the SEOC.

Further, they have agreed that if there is something urgent that the Governor or LG's office needs to get done prior to (or in lieu of) the SEOC approving it, these requests should all come in through me. Beth Clement was going to share this message with Gov's office and LG's office staff.

Procurement should have the new form up today for vendors to use as well. We can share that with you once it is working.

Hi Kemal,

Yes, any and all DTMB work related to the Flint water issue. I will ask Susan to coordinate this for our team. Susan will be our point of contact to coordinate with Chris Christensen and Kristi Broessel.

I talked to Chris Christensen today to make him aware of upcoming work for MDHHS. We need to route requests through Chris for approval to ensure appropriate funding.

Thanks,
Linda

On this same topic, David and I had a conversation with the Governor's office after our post-EMT meeting this morning. They have agreed that as a general rule, before we do work on anything, it must be approved by the SEOC.

Further, they have agreed that if there is something urgent that the Governor or LG's office needs to get done prior to (or in lieu of) the SEOC approving it, these requests should all come in through me. Beth Clement was going to share this message with Gov's office and LG's office staff.

Procurement should have the new form up today for vendors to use as well. We can share that with you once it is working.

Per our discussion on Monday at the EMT meeting, Chris Christiansen has provided information on where to refer vendors looking to assist Flint and contact information for DTMB-SEOC. Please see below for the details.

- If you are contacted by a vendor that would like to provide donation for the Flint water problem, please direct them to Flintdonations@michigan.gov
- If you have any additional questions relating to the Flint issue please direct them to DTMBECC@michigan.gov

Thank you,

Chanda

Michigan has fewer goals to end child welfare system oversight

WLNS – February 2, 2016, By The Associated Press

LANSING, Mich. (AP) – A judge in Detroit has approved an agreement that cuts some goals the state must meet to end federal court oversight of Michigan's child welfare system.

The Michigan Department of Health and Human Services says the modified deal with national advocacy organization Children's Rights was approved Tuesday in U.S. District Court.

Children's Rights filed a lawsuit in 2006 against the state on behalf of nearly 20,000 children over foster care, child protection, health care and other child-welfare issues. Court oversight began in 2008.

Children's Rights says the state has improved foster care, reduced the number of children waiting for adoption and improved caseworker training.

It says improvement still is needed to reduce caseworker caseloads, increase visits between caseworkers and children, and improving access to medical care.

Gov. Rick Snyder taking 'baby steps' on Flint water crisis, Michigan senator accuses

MLive – February 2, 2016, By Emily Lawler

LANSING, MI -- Senate Minority Leader Jim Ananich sent a letter to Gov. Rick Snyder over the weekend asking for the thing he says Flint residents need right now: swift action to address the Flint water crisis.

"I'm tired of spin. I'm tired of meetings saying they're going to do things," Ananich said at a press conference Tuesday morning.

The crisis took hold when the city switched its drinking water supply to the Flint River in April of 2014. The more corrosive water leached lead into drinking water, exposing an unknown number of children to complications that could include developmental disabilities and difficulty learning.

Ananich's letter asked general and technical questions of the governor, which Snyder spokesperson Dave Murray said the governor's office was working to answer.

"Members of the Governor's senior staff meet weekly with Sen. Ananich to provide him updates on the Flint effort, answer the Senator's questions, and get his feedback," Murray said. "We'll answer the questions in his letter in a timely fashion, and we will continue to work closely with him and other members of the Flint delegation."

Ananich said that despite the recent enactment of a \$28 million supplemental a few key things were not happening on the ground in Flint.

The supplemental Snyder signed last week included \$10 million from the state's general fund to the Department of Health and Human Services that should go in part toward "nutrition support, food banks, and community education."

But Ananich said there was no nutrition support for families right now. He said that the expansion of the Women Infants and Children program that the Snyder administration had requested was unreasonable. The federal government rejected it.

"We need to put nutrition in our community now, and we can't wait for other folks to come in and save us," Ananich said.

He said state officials haven't told him any specific nutrition program that the appropriation would go toward.

The supplemental also included funding for a study of the infrastructure, which some legislators have said they'd like to see before talking about pipe replacement and who pays for it. But Ananich said that assessment hadn't started yet.

"To have to wait around for months... well they knew about it in July. Why didn't they do it last year?" Ananich said.

Asked if Snyder had done anything right in regards to the Flint water crisis, Ananich responded "not very much, no."

"I think some steps have been taken but we can't afford baby steps," Ananich said.

Murray noted that the governor was preparing his budget proposal and it would include more money to help address the Flint water crisis.

Kildee, Peters Meet with Community Leaders in Flint, Receive Update on Water Crisis

RealEstateRama – February 2, 2016

FLINT, MI – February 2, 2016 – (RealEstateRama) — Congressman Dan Kildee and U.S. Senator Gary Peters today met with community leaders from Flint and representatives of various government agencies to receive updates on response efforts to the Flint water crisis.

"Senator Peters and I had very productive meetings today with Flint residents," Congressman Kildee said. "My top priority continues to be getting Flint any available resources to deal with this crisis, both in the short and long term. The

federal government has already stepped up to help Flint families, but the state, which created this crisis, needs to step up and do more.”

“What is happening in Flint has been a colossal failure on the part of the State, but I am committed to working on the federal level to help Flint overcome this crisis and move forward,” said Senator Peters. “I was pleased to have Congressman Kildee join me as we heard firsthand about the short and long-term challenges facing Flint families, as well as recovery efforts currently underway, and I look forward to continue working with him and the people of Flint.”

During meetings with Flint parents and education stakeholders, Peters and Kildee were joined by representatives from the U.S. Department of Education and U.S. Department of Health and Human Services, and the Senator and Congressman reaffirmed the importance of early childhood education in helping mitigate the effects of lead exposure in children. Next, Peters and Kildee received an update on efforts to improve water quality and identify water infrastructure needs by the Environmental Protection Agency (EPA) and the Michigan Department of Environmental Quality (MDEQ). Peters and Kildee additionally participated in a roundtable discussion with the Flint & Genesee Chamber of Commerce and a representative from the U.S. Small Business Administration (SBA) to discuss support the SBA can provide for small business impacted by the water crisis.

Last week, Peters, along with Senator Debbie Stabenow, introduced legislation as an amendment to the Energy Policy and Modernization Act to help Flint families and support the people of Flint and the City and ensure additional accountability. Kildee will be introducing companion legislation in the House.

The legislation would provide up to \$400 million in new federal emergency funding to the Environmental Protection Agency (EPA) to help replace or fix the City of Flint’s water supply infrastructure. Second, it would establish and fund a \$200 million Center of Excellence on Lead Exposure to focus on the immediate and long-term needs of children and adults exposed to lead. Third, it includes legislation announced by Peters, Stabenow and Kildee requiring the EPA to warn the public of high lead levels in drinking water if a state fails to do so. Fourth, it gives the State of Michigan new flexibility to use funding to help forgive water infrastructure loans. - See more at:

Attorney Geoffrey Fieger seeks \$100 million in Flint Legionnaires' lawsuit

MLive – February 2, 2016, By Garfy Ridley

FLINT, MI – Attorney Geoffrey Fieger says he has filed a lawsuit seeking \$100 million after a Legionnaires' disease outbreak in the Flint area.

Fieger filed the lawsuit Monday, Feb. 1, in Genesee Circuit Court against McLaren-Flint on behalf of 58-year-old Debra Kidd. Kidd died from Legionella pneumonia on Aug. 2, 2015, seven days after she arrived at the hospital's emergency room with a headache.

The lawsuit claims McLaren, which used Flint city water, knew its water supply was contaminated with the Legionella bacteria in April 2014. Over the next 17 months, multiple McLaren patients developed Legionnaires' disease.

McLaren officials confirmed to The Flint Journal in January that Legionella bacteria was found in the hospital's water supply at their Flint location after the city switched from Detroit to the Flint River as their water source in 2014.

Gov. Rick Snyder and state Health and Human Services Department officials said Wednesday, Jan. 13, that the Flint area experienced a spike in Legionnaires' beginning in summer 2014.

Initially, state officials reported that 10 people had died from the outbreak, but that number was changed to nine in the newest study from the state. More than 70 were sickened in the outbreak.

The outbreak began shortly after Flint stopped using treated water from Detroit and began using the Flint River as the source of its drinking water, a change made by a Snyder-appointed emergency manager.

State health officials investigated a possible link between the city's water supply and the outbreak, but the Michigan Department of Health and Human Services issued a report Jan. 21 saying the state investigators were unable to "determine a conclusive environmental source" of a Legionnaires Disease outbreak in the Flint area.

However, Fieger claims the water change played a role in the outbreak.

"The more I read and learn about this, the angrier I get," Fieger said. "To save a few dollars, the Snyder Administration poisoned an entire city and thought they could get away with it because those poisoned were poor, and primarily black."

McLaren spokeswoman Laurie Prochazka said the hospital has not yet seen the lawsuit and declined comment.

"It wouldn't be appropriate to discuss the litigation," Snyder's Press Secretary Dave Murray said. "But with regard to Mr. Feiger's comments, Gov. Snyder takes the well-being of all of Michigan residents very seriously, and Flint residents are not an exception to that."

No response has been filed in the case.

Prominent Baltimore attorney brings class-action lawsuit against Flint officials over water contamination

The Baltimore Sun – February 3, 2016, by Kevin Rector

Prominent Baltimore attorney William H. "Billy" Murphy Jr. — who recently won a \$6.4 million settlement for the family of Freddie Gray — has brought a federal class-action lawsuit against state and local officials in Flint, Michigan over the contamination of the city's drinking water.

The lawsuit, filed by Murphy and Flint attorney Val Washington in U.S. District Court in eastern Michigan on Sunday, calls for the city and state to refund \$150 million in water bills paid by affected Flint residents and businesses during the time the city's water was being drawn from the Flint River. Officials have said the decision to start drawing drinking water from the river in 2014 resulted in lead contamination.

Murphy, who was in Flint on Tuesday to announce the decision, told The Baltimore Sun that the lawsuit also seeks additional compensation for "all of the damages that are a consequence of having to be forced to use dangerous water," and that the total amount sought will be "more than \$150 million, significantly more, because it includes the cost of changing the interior plumbing in every house, and hot water heaters."

Gov. Rick Snyder declared an emergency in Flint early last month, and the state set aside \$28 million for providing residents with bottled water and other services. President Barack Obama signed an emergency declaration for the state as well, clearing the way for federal aid.

The city has returned to Detroit's water system, but officials remain concerned that damage to Flint pipes caused by the Flint River water could allow them to continue leaching lead into the city's drinking water. Lead exposure can cause learning disabilities and other behavioral problems in children.

Some residents in Flint who have been tested since the contamination have shown elevated blood lead levels. Michigan Attorney General Bill Schuette has said his office will investigate to determine if any Michigan laws were violated.

The lawsuit names as defendants the city of Flint and its former mayor, Dayne Walling, as well as the state of Michigan and Snyder. It also names two Flint emergency managers, Darnell Earley and Gerald Ambrose, as well as the Michigan Department of Environmental Quality and the Michigan Department of Health and Human Services.

State and city officials could not immediately be reached for comment on Tuesday.

The lawsuit claims the city and state violated the residents' rights by providing them with contaminated water and then telling them the water was safe. It also accuses the officials of the "far more insidious" act of conspiring to cover up the problem even as residents were being poisoned.

Among the plaintiffs are Beatrice Boler, a married mother of two from Flint whose family received contaminated water, and Pastor Edwin Anderson and Mrs. Alline Anderson, home owners in Flint who also received contaminated water. A local Flint business is also named as a plaintiff.

Murphy is no stranger to high-profile cases.

Gray, 25 — who suffered lead poisoning as a child himself — suffered a fatal spinal cord injury while in Baltimore police custody in April. His death sparked widespread protests, and his funeral was followed by rioting, looting and arson that attracted international attention to the case.

Murphy never filed a lawsuit in the Gray case, but negotiated with Baltimore officials on behalf of Gray's family — eventually agreeing to the \$6.4 million settlement in September.

Lawsuits seek \$250M due to Flint, Michigan, water supply issues

ABA Journal – February 2, 2016, By Martha Neil

A federal civil rights lawsuit filed Friday against state and local officials in Flint, Michigan, is seeking a refund of \$150 million in municipal water bill payments made while the water supply was contaminated.

Now the subject of a criminal investigation, the switch to Flint River water by a state-appointed emergency manager, as well as alleged refusal by multiple officials to listen to residents' complaints about the adverse effects their families experienced, constituted a conspiracy to deny their constitutional rights, contends the suit. The untreated water was corrosive, causing lead to leach from city water delivery pipes. The switch was made in April 2014, and it was not until October 2015 that the city went back to Detroit's water system, which pulls from Lake Huron.

Representing the plaintiffs along with a local attorney is Murphy, Falcon & Murphy, which successfully represented the family of Freddie Gray after he died in police custody in Baltimore, reports the *Detroit Free Press*. The Flint suit seeks class-action status.

Meanwhile, Michigan attorney Geoffrey Fieger on Monday filed a \$100 million lawsuit in Genesee Circuit Court over an outbreak of Legionnaires' disease at a hospital using Flint water, reports *MLive.com*.

Gov. Rick Snyder and the state Health and Human Services Department have acknowledged a spike in cases after the water supply switch, but the department said it could not definitively be connected to the water supply. Snyder was elected to office in 2010 as a Republican.

"The more I read and learn about this, the angrier I get," Fieger said. "To save a few dollars, the Snyder Administration poisoned an entire city and thought they could get away with it because those poisoned were poor, and primarily black."

Representatives of Snyder and the hospital declined to comment on his suit. However, Snyder's press secretary said the governor "takes the well-being of all of Michigan residents very seriously, and Flint residents are not an exception to that."

Leadership class to help give foster children, parents more comfortable visit room

Petoskey News – February 2, 2016

People who use the visitation room at the Michigan Department of Health and Human Services in Petoskey are probably not thinking about worn-out furniture or sparse wall decorations. It is more likely they have other, more important things on their minds. Like spending quality time with their children.

One look at the room told Natalie Kasiborski, member of the Petoskey Regional Chamber of Commerce's Leadership Little Traverse class of 2016, all she needed to know.

"My first thought upon seeing the room was that we had an opportunity to create a warmer, more welcoming space for children and parents who are in a difficult situation," said Kasiborski.

Kasiborski and the other 14 members of the leadership class decided unanimously to update this room as part of their community service project, a required part of the program.

A fundraiser is planned to benefit the project from 4-10 p.m. Wednesday, Feb. 10, at Tap 30 in downtown Petoskey. The taproom will donate \$1 from every draft beer sold and members of the Leadership Little Traverse class will be available to answer questions and to accept donations.

Flint rashes: State, U.S. agencies to investigate causes

Detroit Free Press – February 3, 2016, By Kristen Jordan Shamus

The Michigan Department of Health and Human Services has begun to investigate the rashes that have plagued many Flint residents since the city changed its water source to the Flint River in 2014.

“A key message that I have for folks is that we’re taking the rash concerns very seriously because we know that this obviously is a worry,” Dr. Eden Wells, chief medical executive of the Michigan Department of Health and Human Services, told the Free Press Tuesday.

About a dozen calls to report rashes were made last week to the United Way’s 2-1-1 help line or to the public health emergency coordination center in Lansing, Wells said.

“A couple calls were clustered together, and we said, ‘This is important. There clearly is a concern here, and let’s make sure that this is fully investigated.’ ”

The state will get help from the U.S. Centers for Disease Control and Prevention as well as the federal Environmental Protection Agency in doing the investigation, which involves enhanced testing, home visits and surveys, said Wells, who also is clinical associate professor of epidemiology at the University of Michigan.

Bernadette Burden, a spokeswoman for the CDC, said Tuesday that the agency will provide technical support to the state as it develops protocols and questionnaires.

“We’re providing information to them. This is very much a process that’s evolving,” Burden said.

But already, Wells said, interviews are under way in Flint.

DETROIT FREE PRESS

DEQ chief: EPA dragged foot in Flint crisis for months

“They have actually done enhanced surveys, asking lots of questions about soaps and allergies and also how long their water may have been affected, what kind of house they live in, the water system, and they’re also taking water samples.”

Christeen Lawson, 64, who lives on Hobson Avenue in Flint, said she wasn’t sure what caused the red, bumpy rash on her feet and legs that started soon after the city first changed the source of its water, and residents started reporting foul-smelling, oddly colored water flowing through their taps.

“It started when the water got bad,” Lawson said. “I didn’t know what it was coming from. I thought it was from being allergic to plums or whatever I was eating. It just started happening. ... I didn’t want to believe the people that said the water could do that stuff to you.”

Lawson said she started taking showers instead of baths, hoping it would help the hot, itchy skin, but there's been little reprieve.

“I scratch until it bleeds sometimes,” she said.

"I never did go to the doctor for it. I was drinking the water. At the time, I didn't know about the lead. Then my oldest daughter called and said, 'Momma, I heard you're drinking the water. Don't drink that water.' But I had to drink something. I wasn't going to dehydrate. I didn't have no choice. I didn't have no way to get no water, and I didn't know they was delivering it."

When the switch was made to the Flint River water from Lake Huron in 2014 as a cost-saving measure, corrosion-control chemicals were not used to prevent lead and copper in pipes from leaching into the tap water. Even though Flint started using water from Lake Huron again in October, the damage is done and pipes continue to leach lead.

DETROIT FREE PRESS

Free Press photographer took Time cover picture

"We know that lead itself does not cause rashes, but there might be water in certain home systems, maybe water that sits stagnant in the hot-water heaters, or other metals or something," Wells said. "Late last week, I had assurances that we did not see evidence of a bacteria problem, and that these rashes do not appear consistent with bacteria."

Lawson's 5-year-old granddaughter has rashes, too.

"She's got an appointment with the doctor tomorrow," Lawson said, where she'll be tested for lead poisoning.

Wells said that's an important first step for anyone suffering from a rash or who has concerns about lead poisoning.

"When I talk to pediatricians, there are so many different causes of rashes," Wells said. "So people are encouraged to go to their primary care physicians and get the medical evaluation first, and then we actually have the ability for either health care providers or others to further contact us to see whether it's

"When I talk to pediatricians, there are so many different causes of rashes," Wells said. "So people are encouraged to go to their primary care physicians and get the medical evaluation first, and then we actually have the ability for either health care providers or others to further contact us to see whether it's the water. Individuals also could call the 2-1-1 United Way line."

People who don't have a primary care physician, are uninsured or under-insured can seek help from the health clinic in the McCree Building at the Genesee County Health Department, Wells said.

"They can get enrolled with primary care provider there, and they don't have to have insurance and such. So the local health department will get them access. And if they're having trouble with that, they can call 211."

Dr. Walter Barkey, a dermatologist in Flint, said he hasn't seen large numbers of patients reporting rashes. But, he noted, the people who've been most affected by the city's water crisis are those least likely to be able to afford the care of a specialist, like a dermatologist.

Barkey also serves on the board of the Whaley Children's Center, a residential treatment center for abused kids in Flint. He treats those children free, and said even among them — some of the most disadvantaged and at-risk children — he hasn't seen a rise in rashes.

"There are kids out there with skin problems, and people always try to connect one thing to another," Dr. Barkey said. "It might not be direct cause and effect."

Eczema, he said, is pretty common, and people with eczema tend to be most sensitive to changes in water.

"I do sometimes notice people who have their skin change when they use well water, switch to city water and back," Barkey said. "But it does not cause a problem in someone who doesn't have a problem. ... People with eczema can be more irritated by it than other folks."

He said that people who have a history of eczema and are noticing skin irritation should take short, luke-warm baths or showers, and apply a thick moisturizer afterward. When eczema flares, he said a topical steroid cream can also help.

Wells urged people with skin problems to seek medical help.

"I've heard some anecdotal stories where some people may be using things on their skin to help with the rash, which may be causing some harm. Bleach products and such can actually hurt," she said. "I would suggest talking with their health providers so they don't make the rash worse or cause themselves harm."

She said researchers also are investigating reports of hair loss.

"There are a lot of people working to address their concerns and to get them good information," said Wells. "The minute we have that, we want to share that with you all. We're taking it very seriously and investigating to the utmost of our ability."

How to get help

- Flint-area residents in need of medical services can reach out to the [Genesee County Health Department](#), McCree Building South Health Center, 630 S. Saginaw St., Suite 4 or call 810-257-3612. For more, go to <http://www.gchd.us/>.
- The [United Way of Genesee County](#) also is helping with the water crisis. Help, resources and information is available by calling 2-1-1. For details, go to <http://www.unitedwaygenesee.org/>
- Flint residents who need crisis counseling can call the state's Disaster Distress Helpline at 800-985-5990 or text "TalkWithUs" to 66746.

Kalamazoo Psychiatric Hospital employee gets his job back, more may join him

MLive – February 3, 2016, By Rosemary Parker

KALAMAZOO, MI -- A former Kalamazoo Psychiatric Hospital employee, fired last year after 36 years on the job, has his job back following an arbitration ruling.

George White goes back to work Feb. 16, after he completes a new training regimen that gives more guidance about how to handle violent patients.

The return comes after White's appeal that he was wrongfully discharged more than a year ago from his work as a residential care aide.

White's dismissal was modified to a 20-day suspension, Jennifer Eisner, public information officer for the Michigan Department of Health and Human Services said.

A residential care aide at the Kalamazoo Psychiatric Hospital, White, president of AFSCME 652, the labor union representing aides at KPH, and several other employees were fired over the treatment of a 30-year-old KPH patient.

White and others argued that the workers were following a doctor's orders that they physically converge on the 30-year-old male patient at the first signs he was becoming aggressive, orders that were not changed until after the patient suffered a broken arm. After that incident, the patient was moved to a different hospital.

"I knew that what we were doing wasn't a good idea, and that once an injury occurred they would try to cover their behinds," White told the Kalamazoo Gazette.

White said he complained about the patient's treatment plan to the Office of Recipient Rights two days after the state launched an investigation into other allegations of problems at KPH following the death of a patient in March. The investigation into the hospital's handling of that death led to a shake-up that included the resignation of James Coleman, the hospital's long-time director, and the dismissal of other staff.

For his part, White said, he is "very satisfied with this conclusion" which he considers "a significant victory for the union and its members."

He said the arbitrator, who studied testimony, videotapes and reports, said a number of times "that it was systemic failure" that led to White and other employees' failure to use approved techniques when dealing with a violent patient.

"I think it's really important that I was considered to be the worst individual," White said. "I had more charges than anybody, I had 13 charges, and I still came out victorious, the union came out victorious, with the grace of God."

It's a good thing for the hospital, too, he said, to the extent that the shake-up resulted in changes, including the upgraded training he will be required to take.

"We've always been trained," he said, "but the training did not cover many of the situations we found ourselves in. Patients biting, head butting and kicking, it didn't cover those, but those were exactly the things we were encountering. We were left to our own devices," he said.

He said he hopes to return to find that after a year, the hospital has become a more inclusive environment, where employee input is seriously considered.

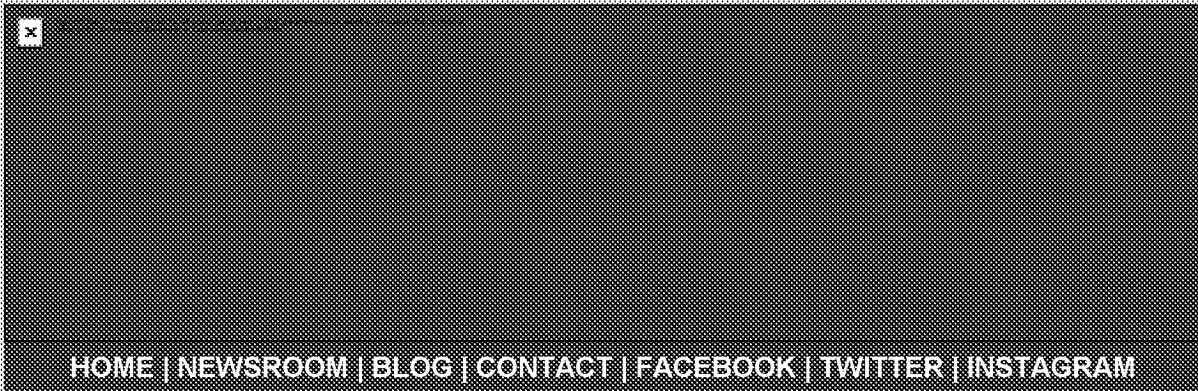

The remaining arbitration hearings involving other employees continue to be on hold pending hearing dates, Eisner said.

Eisner said Tuesday, Feb. 2 that an additional employee has been reinstated, but no details would be released without a Freedom of Information Request.

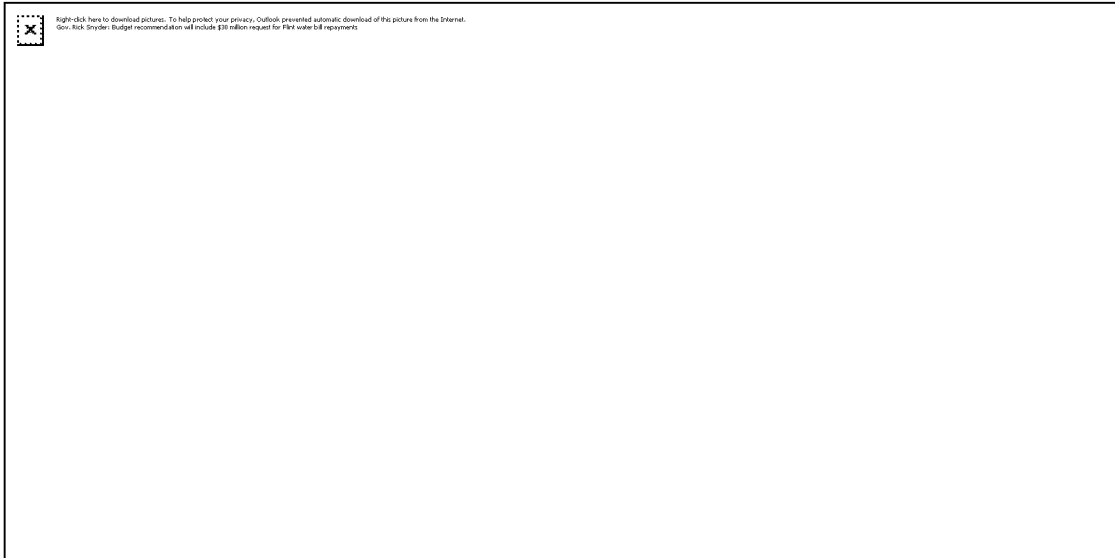

White's pay and benefits will be restored, he said.

Subject: "Flint residents should not have to pay for water they cannot drink"

Budget recommendation will include \$30 million request for Flint water bill repayments

When Governor Rick Snyder presents his budget recommendation next Wednesday, Feb. 10, he will include a \$30 million request for the residents of Flint to keep their water service on and eliminate the need to pay for water they cannot completely trust to drink.

Under the governor's ask, the funding would enable the city of Flint to apply credits for customers on future bills. Estimates show water is roughly 47 percent of billing and sewer costs are around 53 percent. The credit would be applied to consumption usage (roughly 65 percent) of a resident's water portion of the bill, such as for bathing, drinking, cooking,

and washing your hands. Residents still would be responsible for paying the sewer portion of their water bills.

Professor Marc Edwards of Virginia Tech said, "This essentially refunds all the money associated with consumption or consumer use. I think it's an amazing gesture of common sense and good will and it corrects an injustice. I don't think there's a precedent for this. I feel so encouraged by the direction this is going."

We spoke with Staff Sgt. Thomas Vega about the critical resources they're providing to Flint families every day. He also encouraged residents to pick up and return their water testing kits to Flint fire stations. Test results will be posted online at www.mi.gov/flintwater. **[Click here to watch the video.](#)**

Transparency on life support in Michigan

The Times Herald – February 3, 2016

The pointless gesture of repealing the Affordable Care Act keeps failing in Congress, so Republicans are moving the game to Lansing.

State Sen. Tonya Schuitmaker, R-Mattewan, has introduced a bill — co-sponsored by Phil Pavlov, R-St. Clair Township — that would prohibit the Michigan Department of Health and Human Services from promoting the Healthy Michigan Plan.

The Healthy Michigan Plan is the Medicaid expansion that Gov. Rick Snyder managed to push through the Legislature in 2013. It passed by a single vote.

It provides health insurance coverage as well as wellness benefits for Michigan families who might not otherwise be able to afford health care premiums. A single person with an income of about \$15,521 or a family of four at \$31,721 are eligible to participate in the the program.

It serves more than 611,000 people statewide — 7,658 in St. Clair County and 1,789 in Sanilac.

"The Healthy Michigan Plan has provided Michiganders with the opportunity to improve their health and wellness by enrolling in health care coverage," said Snyder said in December. "I'm proud of this program, our residents, and Michigan's continued leadership in health care innovation. I appreciate the work of the Centers for Medicaid and Medicare Services and thank it for its partnership and approval of our unique approach to keep Michigan moving forward."

Schuitmaker, Pavlov and their colleagues who co-sponsored Senate Bill 542 don't want Michigan moving forward with healthy families. Mostly, though, they don't want to be seen encouraging anyone moving toward the Affordable Care Act, even if it makes providing vision care to minors a political thing instead of the right thing.

Their bill is short-sighted.

The Department of Health and Human Services spends about \$1 million a year advertising the plan and encouraging families to participate. It's an obvious case where it pays to advertise. By encouraging preventive care, Healthy Michigan keeps down health care costs for all of us. And the plan isn't free for participants; all of those enrolled have co-pays and many, depending on income, pay part of their premiums.

Senate Bill 542 is now before the Committee on Health Policy. It needs to die there; it's an unhealthy policy.

State Making Progress In Ensuring Rights Of Foster Children

WMUK – February 3, 2016, By Rick Pluta

MPRN-Lansing) An overhaul of Michigan's child foster care system is showing results, and the state is moving closer to ending a federal judge's oversight.

The national advocacy group Children's Rights and the state Department of Health and Human Services filed a new settlement agreement with the US District Court in Detroit. It lifts many compliance requirements the state has to follow.

The Children's Rights lawsuit was filed 10 years ago. Children's Rights says, since then, the state had reduced the number of kids waiting to be adopted, safely reunited more children with their birth families, and provided better training for caseworkers.

"Both parties know that more work is needed, and we view it as a positive that we've come to terms on how to get it done,"

said Children's Rights attorney Sara Bartosz.

"There is an energy and focus coming out of the negotiations that should propel future reform and, in turn, keep Michigan's children safe in foster care."

The list of issues that need to be fixed include reducing caseloads, ensuring more home visits by social workers, and improving access to medical care.

"We understand we have more work to do,"

said Michigan Department of Health and Human Services Director Nick Lyons.

"Now we can devote additional resources to improving safety and well-being outcomes for children and less on continuing to monitor issues that we have already addressed."

Flint's Government Issued Water Filters Are Still Producing Toxic Water

ATTN.com – February 3, 2016, By Alex Mierjeski

Government issued water filters in Flint aren't working, and the crisis is far from over.

Social activist Michael Skolnik brought national attention to this latest discouraging development by sharing a photo of one resident whose government-provided filter wasn't keeping lead out of her water.

A photo posted by Michael Skolnik (@michaelskolnik) on Feb 1, 2016 at 7:38am PST

A Flint resident named Nakeyja was getting filtered water with a reading of 184 ppb, more than 10 times the safe level. Her 1-year-old daughter was having seizures and had tested high for lead poisoning, she said, and her 3-year-old son was staring at the wall for long periods without speaking. According to Skolnik's Instagram posts, she was planning to have him tested this week.

A photo posted by Michael Skolnik (@michaelskolnik) on Feb 1, 2016 at 7:53am PST

On Tuesday, the investigation of the Flint crisis broadened with the inclusion of the FBI. A spokeswoman for the U.S. Attorney's Office in Detroit said that federal prosecutors are "working with a multi-agency investigation team on the Flint water contamination matter, including the FBI, the U.S. Postal Inspection Service, EPA's Office of Inspector General, and EPA's Criminal Investigation Division," the Detroit Free Press reported.

This past weekend, Flint, Michigan Mayor Karen Weaver told a gathered crowd that the government-issued water filters provided to residents weren't working in some homes. She urged residents to test their water using their government-distributed home testing kits.

"The water filters we are currently distributing are rated to safely remove lead up to 150 parts per billion, so this obviously raises concern about the few instances where the test results show levels above 150," Weaver said.

In the meantime, it's unclear what steps are underway to address the insufficient filters, many of which were likely installed in recent days. A spokesperson from the Michigan Department of Health and Human Services could not be reached by ATTN: prior to publication.

The Environmental Protection Agency says anything above 15 ppb is cause for public health concern, and the Centers for Disease Control says that no amount of lead exposure is safe for children.

This news paints a disturbing reality for Flint residents with high lead contamination for two reasons. One is that the "safe" water pumped from Lake Huron into residents' homes still leaches dangerous contaminants from Flint's corroded pipes — even with filters. The other problem is that a permanent fix won't come cheap. In January, Weaver estimated the cost of overhauling the city's pipe system at \$1.5 billion.

Michigan undertaking plan to determine if Flint water safe

Petoskey News – February 2, 2016, By Associated Press

FLINT (AP) — The Michigan Department of Environmental Quality has undertaken a five-part strategy to determine whether Flint's water, which has become contaminated with lead, is safe to drink.

The state said the plan to try to ensure that drinking water no longer is tainted with lead includes residential water testing, school testing, food service and restaurant provider testing, blood testing and overall testing of Flint's water distribution system.

Flint switched its water source from Detroit's water system to the Flint River in 2014 to save money while under state financial management. The river water was not treated properly and lead from pipes leached into Flint homes. The city returned to Detroit's system in October while it awaits the completion of a separate pipeline to Lake Huron this summer.

DEQ Interim Director Keith Creagh told the Detroit Free Press he hopes "to be able to say something about the general health of the system come mid-April."

Creagh said in a release that he met Monday with an official from the U.S. Environmental Protection Agency and that staff from both agencies discussed how to work together to make the best use of data being collected.

The two sides also discussed the DEQ's five-part strategy, Creagh said. The agencies have met regularly since early January.

"These conversations with the EPA are a critical part of our shared response to the emergency in Flint," Creagh said. "We know that moving forward will require all levels of government — along with partners in the business and nonprofit communities and the community of Flint — to work together with the sense of urgency this crisis demands."

State officials say water samples from roughly 5,000 homes have been tested, and about 94 percent have are below the "actionable level" of 15 parts per billion for lead. Still, Michigan Gov. Rick Snyder urged all residents to submit a free water test kit, which can be picked up and returned to designated Flint fire stations.

The DEQ said it is working with the state Department of Health and Human Services to make sure residents with high blood-lead levels get their water tested. Those homes are provided additional services in an effort to minimize lead exposure, the state said.

"We want to ensure that all homes are getting the proper immediate attention and the home water tests will help in that process," Snyder said late Sunday in a statement.

Flint residents coping with lead contamination will be cleared to drink unfiltered water again only when outside experts determine it is safe. Those who are evaluating the water and will help verify its quality include Marc Edwards, a Virginia Tech researcher who helped expose the lead problem and is providing independent guidance to the city and state.

Snyder has accepted responsibility for the emergency while also blaming state and federal environmental regulators. Some have resigned, including the DEQ's former top official, or have been suspended.

In a letter to more than 46,000 state employees Friday, Snyder said "what happened in Flint can never be allowed to happen again anywhere in our state." He said he wants a culture where workers' "input is valued." He also thanked workers for volunteering in Flint in recent weeks.

Ray Holman, legislative liaison for the United Auto Workers Local 6000, the biggest state employee union, called Snyder's letter a "little disingenuous," saying workers often are dissuaded from "thinking outside the box" and speaking up, and have been disciplined for not closely following policy.

Meanwhile, music mogul Russell Simmons has joined many well-known entrepreneurs, artists and actors who have visited the city or pledged their support. He went door-to-door Monday delivering cases of water to residents.

The water comes from AQUAhydrate, a bottled water brand partly owned by Sean "Diddy" Combs and Mark Wahlberg that pledged to donate 1 million bottles to the city. The RushCard prepaid debit card system, of which Simmons is a founder, was part of the relief effort.

MDHHS begins investigation into rash reports in Flint's water crisis

MLive – February 3, 2016, Amanda Emery

FLINT, MI -- State health officials are moving forward in the investigation of rashes possibly associated with Flint's water crisis.

The Michigan Department of Health and Human Services (MDHHS) is working to develop a plan to better understand rashes that have been reported by some Flint residents, according to a news release from the Joint Information Center.

In recent weeks, MDHHS and the United Way 211 Information Line have received a number of calls with questions and concerns about rashes possibly associated with Flint water. Officials said rashes are common in the general public and there are a number of known causes. Investigators will work to identify and rapidly respond to new causes of illness as they emerge, according to the release.

MDHHS has been actively monitoring trends in rash illnesses in Genesee County and said it has not seen evidence of an increase compared to prior years. However, in an effort to proactively respond to reported rashes, MDHHS is developing a plan to conduct structured interviews with members of the public who report current rashes that may be related to exposure to Flint water in their homes, according to the release.

The Centers for Disease Control and Prevention, Agency for Toxic Substances and Disease Registry, and the Environmental Protection Agency are providing technical assistance to MDHHS in this effort.

"Flint residents are understandably worried about the effects of skin exposure to water in their homes, and it's absolutely necessary we follow up directly on their concerns," said Dr. Eden Wells, chief medical executive with the MDHHS in a statement. "While the science currently tells us children and adults can bathe in the water, we are committed to identifying any potential health risks so we can provide information to and protect families in Flint."

MDHHS will start asking health care providers to report cases of current rashes possibly associated with Flint water exposure. Those people will be contacted and interviewed by MDHHS personnel. Investigations will also involve testing home water samples of those with active rashes, according to the release.

This testing will be different from other routine water sampling and testing being done by the Michigan Department of environmental Quality or the EPA in the city. These tests will look for a concentration of metals and other water quality factors that may be associated with the reported rashes, according to the release.

MDHHS is already actively responding to rash reports. Last week, Flint residents who have recently reported rashes were interviewed at their homes by a team from MDHHS. Water samples from the homes were also collected for analysis. Flint residents who have concerns about rashes are encouraged to visit their primary care physician. Information reported by health care providers is an important part of creating a better understanding of the characteristics of these rashes, according to the release.

People with questions can also call the United Wat 211 to be connected with health information specialists to answer their specific concerns.

Local health agency posts more information on childhood lead poisoning

WTVB – February 3, 2016

COLDWATER, MI (WTVB) - The Branch-Hillsdale-St. Joseph Community Health Agency says childhood lead poisoning has been a discussion topic on the state and national level for several months in light of the lead in the water crisis in Flint

and according to the health department, many people in the tri-county area are beginning to question if they should be concerned.

The agency has posted two new frequently asked questions pages on its website with the FAQ's about childhood lead screening and how to have a lead safe home. In addition, it has also linked the Michigan Department of Health and Human Services data chart book "2013 Data Report on Childhood Lead Testing and Elevated Levels" which provides both county and zip code level data for Michigan. The resource is designed to help provide clarity about the lead data being reported in the media.

The staff at the Health Department offices in Coldwater, Hillsdale, and Three Rivers are also available to answer questions. The agency's website is at www.bhsj.org.

Federal agency sends public health "strike team" to Flint

Michigan Radio – February 4, 2016, By Rebecca Williams

[Click here](#) to listen to Environment Report

The U.S. Department of Health and Human Services announced yesterday afternoon they've sent a "public health strike team" to Flint.

HHS says it has sent in more than a dozen officers with the Commissioned Corps. That's a uniformed service of public health experts.

They'll be doing follow-up medical visits with kids whose tests have come back with elevated levels of lead in their blood.

We don't know yet how many kids they'll be visiting. The department did not make anyone available for an interview yesterday.

Experts say there's no safe level of lead exposure.

Lead is known to cause brain damage and behavior problems in kids. The damage is irreversible.

"Our kids had every obstacle to success, and then they got lead." — Dr. Mona Hanna-Attisha

Dr. Mona Hanna-Attisha with Hurley Medical Center spoke to a packed auditorium yesterday at the School of Public Health at the University of Michigan.

"Our kids had every obstacle to success, and then they got lead," she said.

Dr. Hanna-Attisha is the Flint pediatrician who found the number of kids with elevated levels of lead in their blood nearly doubled after Flint switched its water source.

Concern about babies

She told the audience that her team and the state have grossly underestimated the number of kids exposed to lead.

She says routine lead screening would not catch spikes in lead in infants.

"Because we screen for lead at one and two, and the half life of lead is only 28-30 days," Hanna-Attisha said. "So we missed the peaks of these babies. So these babies who were on formula: imagine these moms — they wake up at 3 a.m. Baby wants a bottle. Babies want warm bottles. You get warm tap water, which increases lead leaching, and for the first six months of life, which is exclusive breast feeding or bottle feeding, that baby is getting lead-laced formula."

Hanna-Attisha says those are the kids who need the most aggressive intervention — the ones who were exposed to lead in their water as babies.

She says that means doctors need to follow their brain development closely, and they need access to good nutrition, preschool and early literacy programs.

Editor's Note: Don't change vaccine waiver rule

The Detroit News – February 3, 2016, By Ingrid Jacques

If something is working well, just leave it alone. Since a new state rule regarding vaccine waivers took effect a year ago, more parents are getting their children vaccinated.

That's a positive trend that will lead to a healthier state by preventing the spread of childhood diseases like measles and mumps. Late last month, the Michigan Department of Health and Human Services released data showing a 39 percent decline in vaccine waivers last year.

The state health department's new rule makes it tougher for parents to get waivers for shots before sending their children to school. Now, if they want a waiver, they must first meet with a health professional, rather than just submitting a form. That additional education has clearly worked in Michigan, which previously had the fourth highest waiver rate in the country.

Yet a Republican lawmaker is trying to reverse the new vaccine rule. Rep. Tom Hooker from Byron Center seems more upset that the health department stepped on his turf than the change itself.

Hooker doesn't like that the rule makes vaccination exemptions more stringent than current law. "This legislation is not an attack on the Department of Health and Human Services, we are simply seeking to return to the DHHS policy that has existed for the last 40 years," Hooker said in a statement. "If you want to change the law, the process is through the Legislature and the governor."

The state's medical community is pushing hard against this legislation, and it should. Hooker should leave this issue alone for the health of Michigan.

<http://www.detroitnews.com/story/opinion/columnists/ingrid-jacques/2016/02/03/ed-note-vaccine-waiver/79792972/>

Michigan Senate approves \$30M to pay Flint residents' water bills

MLive – February 4, 2016, By Emily Lawler

LANSING, MI -- Michigan Senators today approved an immediate \$30 million to pay Flint residents' bills for water rendered unusable by a water crisis.

Gov. Rick Snyder on Tuesday proposed the \$30 million as part of next year's budget, saying residents should not have to pay for water they cannot drink.

"I agree with Flint residents, that they should not have to pay for water they cannot drink," Snyder said in a statement. "My budget recommendation will include the request for the state to make payments to the city's water system for residential bills going back to April 2014."

However, the Senate on Thursday acted more quickly than next year's budget, which would go into effect Oct. 1, 2016. The Senate approved a measure that would insert the \$30 million in the current year's budget.

It was Sen. Rick Jones, R-Grand Ledge, who substituted the bill and turned it into \$30 million for Flint. The bill gives the money to the state Treasury to "help cover the cost of water bills for residents of the city of Flint." Jones said it paid the water portion of residents' bills from April of 2014 until the water is safe to drink, but does not cover the sewer portion of residents' bills.

"What I want to do as a former sheriff who believes in action is make sure we take care of those water bills," Jones said.

The chamber turned down an amendment from Senate Minority Leader Jim Ananich that would have changed the total amount to \$60 million. Ananich said that Flint Mayor Karen Weaver had higher estimates for what the water bills may total.

"Please consider approving this amendment so we don't miss an opportunity to show that we are listening and acting," Ananich said.

The chamber turned down the amendment 14-23. It also turned down an amendment from Sen. Curtis Hertel, D-Lansing, which would have appropriated an additional \$3.6 million to expand the Women Infants and Children program for Flint residents. Medical experts with the Department of Health and Human Services have said that a healthy diet can help counteract the effects of lead in children's bodies.

Sen. Mike Shirkey, R-Clarklake, won an accountability amendment requiring the department to spend the money as intended.

The Senate approved SB 136 as amended unanimously 37-0.

Senate Majority Leader Arlan Meekhof said the action was both swift and reasonable, and said there would be more work to do to help Flint in the budget that starts Oct. 1.

"I will continue to work with my colleagues through the budget process to pursue long-term solutions to the water crisis in Flint," Meekhof said.

The water crisis started in April 2014 when the city switched water sources. Without proper treatment, more corrosive water from the Flint River resulted in pipes leaching lead into the city's drinking water supply.

The House of Representatives would have to approve the \$30 million appropriation next.

The legislature previously approved just over \$9 million to help the city switch water supplies in wake of the crisis and another \$28 million for immediate services like water, filters and school nurses.

Child porn charges filed against ex-village leader, county employee

MLive – February 3, 2016, By John S. Hausman

SPARTA, MI – Paul Bryan Hibbard, a suspended Muskegon County employee and ex-Sparta Village Council member, is being charged in Kent County with possession of child pornography.

An arrest warrant has been issued charging Hibbard, 45, with three counts of possessing child porn and two counts of using a computer to commit a crime, according to a Kent County 63rd District Court clerk. District Judge Jeffrey J. O'Hara signed the warrant and set interim bond of \$25,000.

All the charges are felonies. Child porn possession is punishable by up to four years in prison.

Hibbard had not been arraigned as of early Wednesday afternoon, Feb. 3. It was not immediately clear if he'd been arrested. He was not listed on the Kent County Jail inmate lookup website as of 12:45 p.m. Wednesday, Feb. 3.

Hibbard, who works for Muskegon County's Facilities Management department, is already charged in Muskegon County with procuring an act of gross indecency between himself and a minor child, a felony punishable by up to five years in prison. He's also charged with contributing to the neglect of minors, a 90-day misdemeanor.

Hibbard posted an interim surety bond of \$10,000 in the Muskegon County case and was free awaiting walk-in arraignment, scheduled for Feb. 9.

According to Muskegon County court records, the procuring and neglect charges stem from text messages he's alleged to have exchanged with another Muskegon County employee, Christine Marie Workman.

Workman, 38, of Norton Shores is also charged with contributing to the neglect of minors. A court order Jan. 22 removed her from her home and placed her children in the custody of their father under the supervision of the Michigan Department of Health and Human Services, according to court records.

Investigators for that department and the Michigan State Police found text messages in which Hibbard allegedly expressed a wish to see sexually explicit photos of Workman's young daughters, according to a neglect and abuse petition against Workman filed in Muskegon County Juvenile Court.

Workman allegedly expressed willingness to send such images, but no evidence has been found that she actually sent any. She also allegedly engaged in sexual banter with Hibbard regarding the children in text messages, according to the petition.

Both employees were suspended without pay Jan. 22 pending the results of an internal investigation, Muskegon County Administrator Mark Eisenbarth said Monday.

The text exchanges were first brought to the attention of child protective services workers with the Muskegon County office of the Department Health and Human Services. Personnel of that office contacted the state police, according to Chief Assistant Muskegon County Prosecutor Timothy M. Maat.

Maat did not have information Wednesday on who contacted that office or how the texts first came to light.

Forensic investigation of the defendants' phones continues. County officials are also investigating whether the texting was done at work, which would be a job violation although not relevant to the criminal charges.

Workman works for the county's Equalization Department. She formerly worked for Family Division of Muskegon County 14th Circuit Court, so two judges excused themselves from overseeing her neglect and abuse case. That case has been assigned to Circuit Judge Annette Rose Smedley.

Hibbard resigned Sept. 14 from the Sparta Village Council after serving seven years, abruptly walking out of a long council meeting during a recess and saying "I resign." He later said he didn't mean to resign and wanted to be reappointed.

Helping Flint since its beginning

MSU Today – February 4, 2016, By Layne Cameron and Beth Stuever

Michigan State University and Flint were both founded in 1855. So it's no surprise to learn that the university has been working closely with the city for more than 100 years.

Specifically, MSU Extension has been helping the residents of Flint to solve local problems, do their jobs better, raise healthy and safe families, build their communities and empower their children to dream of a successful future, said Jeff Dwyer, interim director of MSU Extension.

"We have deep relationships with the people of Flint because of our long-standing commitment to communities," he said. "Recently, our health and nutrition professionals have been working closely with the local health department, local agencies and health professionals since the lead issue was uncovered. We will continue to strengthen our programming there to help doctors, parents and caregivers deal with the short- and long-term effects of this public health crisis."

MSU will continue working with this community long after the TV cameras have gone, he added.

Here are some examples of MSU Extension programs that are benefiting the citizens of Flint:

Through a partnership with the U.S. Department of Agriculture and Michigan Department of Human Services, MSU Extension provides Supplemental Nutrition Assistance Program Education, or SNAP-Ed, a free nutrition education program to reduce hunger and food insecurity and promote healthy eating habits. Nutrition is one of the first lines of defense against the harmful effects of lead.

MSU Extension and Hurley Children's Hospital have partnered to offer cooking classes at the Flint Farmers' Market. The classes focus on foods that are high in iron, calcium and Vitamin C, all of which help block the absorption of lead. Michigan 4-H helps young people learn critical life skills. MSU Extension professionals in Flint organized a 4-H SPIN (special interest) club focusing on water filtration and helping people understand why they need to be concerned with drinking filtered water or bottled water.

MSU Extension has long-standing partnerships with the state's agriculture commodity organizations. Working together, they were able to get more iron-, calcium- and vitamin C-rich foods that block lead absorption delivered to the Eastern Michigan Food Bank so they can get it to the people who need it.

Edible Flint is an informal cooperative of food producers. Its goal is to increase the presence and success of urban gardeners and farmers in Flint by collectively producing and distributing naturally grown, local produce at the Flint Farmers' Market. Recent programs have focused on lead in soils and in making a difference for people who are growing their own food.

MSU Extension facilitates Genesee Food Systems/Flint Food Hub planning meetings to support the FoodWorks incubator kitchen at the Flint Farmers' Market, including its capacity to operate as a food hub. Food hubs are centrally located facilities with a business management structure facilitating the aggregation, storage, processing, distribution and marketing of locally produced food products. This provides wider access to institutional and retail markets for small to mid-sized producers, and increasing access of fresh healthy food for consumers.

Michigan officials warned of water, Legionnaires' link

The Detroit News – February 4, 2016, By Jim Lynch

A top aide for Gov. Rick Snyder was notified about a rise in the number of Genesee County Legionnaires' disease cases — and their possible link to Flint's water source — in March, more than 10 months before the governor held a press conference to inform the public.

An email string shows communication between Michigan's Department of Environmental Quality and Harvey Hollins, a Snyder aide, on March 13.

The emails, released Thursday by the liberal advocacy group Progress Michigan, show then-DEQ spokesman Brad Wurfel laid out the health statistics on Legionnaire's coming from Genesee County — data that coincided with Flint's move to its river as a water source. The information also included a county health department official linking the water to the outbreak.

[DETROIT NEWS](#)

[Schuette investigation into Flint to go back to 2006](#)

Snyder hosted a press conference on Jan. 13 in which he disclosed 87 Legionnaires' disease cases had been reported in Genesee County between June 2014 and November 2015. At least nine deaths have been linked to the outbreak.

At the event, Snyder stated: "The information was just recently presented to me, and I thought it was important to share."

On Thursday evening, Snyder's office didn't dispute the emails' authenticity and issued a statement repeating the governor's timeline.

"When Harvey Hollins received the March email, he requested the DEQ look into the concerns, check with its experts, and get the facts," wrote Snyder spokesman David Murray in an email response to The News. "If the concerns were determined to be credible, the director was to bring the issue to the attention of the Governor.

"The issue was not brought to the Governor's attention until January of this year. Gov. Snyder has made changes at the department to address these concerns and change the culture to best protect the well-being of Michiganders."

In March, Hollins, Snyder's director of urban initiatives, was told:

■ More than 40 Legionnaires' cases had been reported since the previous April. "That's a significant uptick — more than all the cases in the last five years or more combined."

■ "April/May is usually the start of Legionnaires' season ... but it is also the point at which the city switched to the Flint River as a (water) source."

■ County health departments are supposed to work to identify the source of Legionnaires' disease in all cases. "At a January meeting with local hospitals, (Michigan Department of Health and Human Services Director) Nick Lyon reportedly directed the county health folks ... to get this done. ... As I'm sitting here today, it still is not done to my knowledge."

Snyder appointed Hollins in December to be the point person between state agencies and Flint as they worked to address elevated levels of lead in the city's water system that prompted Snyder to declare a state of emergency.

On Thursday, state Rep. Tim Greimel, D-Auburn Hills raised the stakes against Snyder.

"If he did know and did nothing, he needs to resign immediately," Greimel stated in a press release. "If he did not know, he and his administration are guilty of colossal incompetence. Snyder promised he would bring corporate-like efficiency to state government, but the only thing he has brought is corporate like-neglect of everyday Michiganders."

Last month, Snyder's former chief of staff, Dennis Muchmore, said neither he nor Snyder knew but they should have been told earlier.

"What it does is show is that that information flow ... isn't always forthcoming," Muchmore said in mid-January on WKAR-TV's "Off The Record" show.

"I'm sure he's angry," he said about Snyder after a taping of the show. "I'm getting used to it. ... I'm over being angry about it because it doesn't do any good."

Legionnaires' disease is caused in warmer months by a bacteria in warm fresh water that leads to pneumonia and sometimes death. The bacteria can be found in large plumbing systems, hot tubs, air-conditioning units and fountains.

The Detroit News first reported Jan. 23 that an expert on Legionnaires' disease for McLaren Regional Medical Center said Flint's contaminated water likely contributed to the Legionnaires' outbreak in Genesee County, where the bacteria was found in a hospital's water supply.

Water testing during the outbreak found Legionella bacteria at the Flint hospital, where an expert on the disease concluded the organism likely came from the city's tainted water.

Further, a state analysis showed that a high number of those diagnosed with Legionnaires' in Flint had been patients at McLaren Flint in the 14 days prior to showing symptoms.

"The water quality issues, from a microbiological point of view, certainly were a factor in the increase in Legionnaires' disease in Genesee County," Janet Stout, a research associate professor at the University of Pittsburgh's Swanson School of Engineering and an expert on Legionnaires' disease, told The Detroit News. She was hired to help the hospital assess and deal with the Legionella germ found in its water.

Wurfel included correspondence from James Henry, Genesee County's environmental health supervisor, who linked the Legionnaires' cases with the switch in water sources. That communication shows frustration on the part of county officials seeking information from Flint regarding the water supply.

"The increase of the illnesses closely corresponds with the time frame of the switch to Flint River water," Henry wrote. "The majority of the cases reside or have an association with the city. Also, McLaren Hospital identified and mitigated Legionella in their water system. This is rather glaring information and it needs to be looked into now, prior to the warmer summer months when Legionella is at its peak and we are potentially faced with a crisis."

Part of the email exchange includes a letter by Stephen Busch, a top official in DEQ's Office of Drinking Water and Municipal Assistance, questioning Henry's theory.

"Conclusions that Legionella is coming from the public water system without the presentation of any substantiating evidence from your epidemiologic investigation appears premature and prejudice(d) toward that end," he wrote.

Busch is one of two DEQ officials currently suspended while their actions in the Flint water crisis are investigated.

Wurfel also cast doubt on the idea that Flint River water was tied to the Legionnaires' increase.

DETROIT NEWS

House Democrats invite Snyder to testify on Flint

"(Henry)'s made the leap formally in his email that the uptick in cases is directly attributable to the river as a drinking water source — this is beyond irresponsible, given that his department has failed to do the necessary traceback work to provide any conclusive of where the outbreak is sources, and it also flies in the face of the very thing a drinking water system is designed to do," he wrote.

On Thursday, state Sen. Jim Ananich, D-Flint, issued a statement on the response. "Once again, this administration knew for nearly a year that the lives of people in my community were in danger," the statement reads. "They knew and they did nothing. Where is the moral fiber? At what point do they care that people are dying and take steps to actually address the issues?"

U.S. Rep. Dan Kildee, D-Flint Township, offered a similar assessment.

"To now learn that state officials put their own reputations before public health is disgraceful," he stated in a press release. "Despite being aware of the outbreak since early in 2015, state officials failed to notify the public. As a result, nine deaths have been tied to the outbreak. This shocking revelation is yet another unfortunate case of state officials failing Flint residents."

Michigan schools can apply for statewide program

FOX 47 – February 4, 2016

DETROIT, Feb. 4, 2016 — For the seventh year in a row, Michigan schools are invited to apply for the Building Healthy Communities program, a private-public initiative designed to fight obesity and improve childhood health through school-based wellness programming. Building Healthy Communities, originally created by Blue Cross Blue Shield of Michigan in 2009, is an evidence-based, comprehensive, school-wide initiative that supports children's health by providing students, teachers and administrators with tools and resources to improve student health while creating a healthier school environment.

The Building Healthy Communities program is supported by multiple statewide organizations, including Blue Cross Blue Shield of Michigan, the Michigan Department of Health and Human Services, the Michigan Department of Education, the Michigan Fitness Foundation, Michigan State University Extension, Michigan Team Nutrition, United Dairy Industry of Michigan, University of Michigan, Wayne State University Center for School Health and Action for Healthy Kids, working together to address childhood obesity and teach kids healthy habits that can be carried into adulthood. The program has reached over 180,000 students in more than 390 Michigan schools. Currently, 117 schools are implementing the program for the 2015-2016 school year.

Students participating in the Building Healthy Communities elementary school program demonstrated a 28 percent increase in calories burned daily and ate 40 percent more fruits and vegetables than the national average for six- to 11-year-olds. Students reported 130 percent more energy, 83 percent less trouble sleeping and an improved quality of life.

“This program made a significant impact on my son,” said Elizabeth Cranston, whose son attends Scotch Elementary School in West Bloomfield, which implements Building Healthy Communities. “Not only is he getting more physical activity, but he’s also making healthier decisions when it comes to food. Until recently, the only vegetable I could get him to eat was green beans. Now on his own, he’s asking for more variety in vegetables and eating everything we put in front of him.”

Schools looking to get involved in the Building Healthy Communities program have two options:

1. Building Healthy Communities: Elementary School Program - A comprehensive program model designed for elementary schools, in which multiple healthy eating, physical activity opportunities and education are embedded throughout the school environment. Schools can apply for the program at bcbsm.com/buildhealth through March 30, 2016. Interested schools can also join an informational conference call on the Building Healthy Communities: Elementary School Program on Feb. 19 at 10 a.m. or 4 p.m. To join, call 605-475-4700 and enter pass code 759821#.

2. Building Healthy Communities: Step Up for School Wellness Program - A flexible model designed for all grade levels, K – 12, to help educators make targeted improvements to the school environment through physical activity and nutrition components, such as physical education curriculum or toolkits to help incorporate breakfast in classrooms. Schools can apply for the program at <http://buildinghealthycommunities.arewehealthy.com/> through March 18, 2016. Schools interested in applying for the Building Healthy Communities: Step Up for School Wellness Program can register for an informational webinar on Feb. 16 at 10 a.m.

For more information on Building Healthy Communities program or to apply for the program, visit bcbsm.com/buildhealth.

Blue Cross Blue Shield of Michigan, a nonprofit mutual insurance company, is an independent licensee of the Blue Cross and Blue Shield Association. BCBSM provides and administers health benefits to more than 4.5 million members residing in Michigan in addition to employees of Michigan-headquartered companies who reside outside the state. For more company information, visit bcbsm.com and MiBluesPerspectives.com.

Michigan lawmakers support Flint aid bill in Congress

The Detroit News – February 4, 2016, By Melissa Nunn Burke

Washington — The entire Michigan congressional delegation is supporting a new U.S. House bill that aims to avoid crises like the lead contamination of drinking water in Flint.

Reps. Fred Upton, R-St. Joseph, and Dan Kildee, D-Flint Township, have introduced the Safe Drinking Water Act Improved Compliance Awareness Act to enhance requirements for the Environmental Protection Agency to notify the public when concentrations of lead in drinking water exceed safe levels.

The bill would direct the EPA to notify the state of the contamination within 24 hours. If the state doesn't take action to notify the public within 24 hours, then the EPA may do so.

The legislation also requires the EPA to create a strategic plan for handling and improving information sharing between water utilities, states, federal environmental officials and affected consumers.

The legislation is similar to a bill introduced last week by U.S. Sens. Debbie Stabenow, D-Lansing, and Gary Peters, D-Bloomfield Township, except the senators' bill sets a period of 15 days before the EPA should notify the public of the concentrations of lead in a public water system.

"What happened in Flint is simply unacceptable at all levels," said Upton, who chairs the House Committee on Energy and Commerce. "Our bipartisan legislation will ensure consumers are not kept in the dark and makes certain the EPA fulfills their fundamental duty to warn the public of high lead levels."

Kildee said the public should be immediately informed when high lead levels exist in drinking water. "This is the latest action I'm taking in Congress to promote accountability and help Flint recover from this terrible man-made tragedy," he said in a statement.

Kildee has another new bill in the House that calls for short- and long-term investments in Flint, while requiring matching funds from the Michigan Legislature.

The legislation would provide \$385 million in direct grants for repair or replacement of public and private lead service lines, and would allow Michigan to forgive \$21 million in existing water infrastructure loans owed by the city of Flint.

Another provision would provide \$125 million through the Department of Health and Human Services for Head Start and Early Start education for Flint children exposed to lead, as well as \$5 million for health centers at all Flint schools and \$5 million for mental health services for Flint families and children affected by lead exposure.

Through the Department of Education, the bill calls for \$90 million for initiatives such as reduced class sizes, additional personnel, special education services and citywide after-school programs for Flint children exposed to lead.

The legislation would permit the U.S. Department of Agriculture to expand the Women, Infants, and Children (WIC) program to children up to age 10 in areas where a federal state of emergency has been declared.

The USDA last week had rejected Michigan's request to increase WIC access for Flint children ages 5 to 10 to the federal nutritional program for low-income women and children.

Kildee's legislation would also provide \$5 million to the U.S. Department of Housing and Urban Development for lead-prevention programs; \$5 million to the U.S. Department of Justice for juvenile delinquency prevention programs; and \$45 million to the Department of Labor for initiatives including workforce training, economic development assistance programs and minority business development programs.

Finally, the bill would authorize \$100 million for a health monitoring program established within a new Center for Excellence on

Lead Exposure that would create a health registry to monitor and track Flint families and children exposed to lead; research behavioral and health impacts of exposure, including mitigation efforts; and report twice a year to the Flint community on its findings.

'Super' tampons may be to blame for 4 toxic shock cases

WLNS – February 4, 2016, By Koco McAbey

GREENVILLE, Mich. (WOOD) – Health officials in West Michigan are concerned after four teenage girls came down with toxic shock syndrome this year.

The Kent County Health Department said there have been four recent cases in West Michigan. Two of them are in Kent County and one in Mason County. The fourth was in Montcalm County, involving 15-year-old Rylie Whitten, who had one of the most severe cases doctors had seen.

"As we saw with the local case in Greenville, she had a very severe case of toxic shock syndrome," said Brian Hartl of the Kent County Health Department. "The other cases in Kent County weren't that severe, but it can be very life-threatening. We don't know if it's just a coincidence or it's a true reason behind this cluster of cases."

Rylie began struggling with TSS early last month, but her parents thought she had the flu.

"She just came home Sunday night and she wasn't feeling well so she took a bath and went to bed, and it's like she had the flu. She stayed home from school with body aches and still wasn't feeling well that night, and the next morning I called her doctor and said it sounds like the viral flu and I told them her symptoms and that's what they went by. Later that night, it got worse and we decided to take her to the ER and from there, they did a flu swab and that came back negative. And then they thought maybe viral meningitis and that was negative. And they took blood samples and her blood pressure was really low so then right there, it was Aero Med," said Jill Williams, Rylie's mother.

Rylie spent weeks in the hospital fighting the illness.

"It was so many ups and downs that we had to deal with," Williams said.

"They kept her alive just by using medicines. The doctors came to us at that point saying, 'This will end her life,'" Nathan Whitten, Rylie's father, said.

Rylie's story has been making headlines all over the country as she made a quicker recovery than doctors expected, but health officials say three other teenage girls also suffered from the illness within the last year.

Health officials said all of the four girls used super-absorbent tampons, which could be key.

super tampons 020316 "That's kind of sparked our interest in that association. Three of the cases used the same brand; the other case used a separate brand. We can't release anything about the brand at this point, but we know they were super-absorbency tampons. We're still looking for an association. We aren't ready to go forth and say this brand of tampons caused this because you can understand the implications of doing that," Hartl said.

Hartl said women should be mindful of the tampons they are using.

"I think the main issue here is super-absorbency tampons and those are the ones that have been associated historically with toxic shock syndrome. If you have a chance to use a less absorbency tampon, that would be a recommendation," he said.

The state Department of Health and Human Services has been involved in the investigation and submitted a med report to the U.S. Food and Drug Administration to see if they find any other cases around the country involving the tampon brands. They also submitted information to the Centers for Disease Control.

DHHS told 24 Hour News 8 that statewide, there were six TSS cases in 2012, eight in 2013, four in 2014, seven in 2015 and three in 2016 — though the 2015 and 2016 numbers have not yet been finalized. There were also nine case of streptococcal toxic shock in 2012, 10 in 2013, four in 2014, 1 in 2015 and one in 2016. Again, the 2015 and 2016 cases have not yet been finalized.

Rylie can only speak in a whisper due to a collapsed vocal cord from the illness, but her family is thankful that she's back home.

"Just out of the blue, it kind of hits you how lucky we are. It's tears of joy at this point," Nathan Whitten said.

State's flu season off to a slow start

The Mining Journal – February 4, 2016, By Jordan Beck

ESCANABA - While Michigan's 2015-16 flu season has been a mild one so far, local health officials said people should still get vaccinated and take other precautions to be safe.

"It seems like flu season is starting a little bit later this year," said Jennie Miller, immunization and communicable disease coordinator for Public Health of Delta and Menominee Counties.

According to the Michigan Department of Health and Human Services, flu activity in the state was classified as sporadic as of Jan. 20, with 58 cases confirmed statewide. In Delta County, there have been no confirmed cases of influenza this winter.

While some students in the area have stayed home from school due to flu-related illnesses, Miller said even these reports are below average.

"Those are very low - lower than we'd normally see this time of year," she said.

However, Nicole Pirlot, infection preventionist for OSF St. Francis Hospital, said Delta County residents should not become complacent. Although the area's flu season usually peaks by this time of year, it has peaked later in February in the past.

"Sometimes the flu seasons do start later," Pirlot said.

In addition, state reports only track flu cases that have been confirmed by Michigan doctors. While these statistics are still useful for tracking the flu on a state-wide scale, only some of the people who have the flu will go to a doctor for it, and only some of these cases will require testing to diagnose.

Because of these factors, Miller said it is as important to get vaccinated for the flu.

"It could still be coming, so it'd definitely be wise to get a flu vaccine if you haven't," she said.

One of this year's most common strains of influenza is H1N1. Unlike the 2014-15 season, in which vaccines were not as close to the season's common flu strains as they could have been, Miller said this season's vaccines are designed specifically to combat this strain.

"It's looking like it's a better match than it was last year," she said.

Pirlot agreed with Miller on the importance of getting vaccinated. She added that hand-washing may be the second-most effective way to combat the flu.

"(Wash) for at least 15 seconds ... with warm, soapy water," she said.

CDC wants 9K children in Flint tested for lead

The Detroit News – February 4, 2016, By Chad Livengood

Flint — The Centers for Disease Control and Prevention recommends the 9,000 children in Flint under age 6 should have their blood tested for potential lead poisoning after some water tests showed lead levels in the city's water may exceed the capacity of faucet filters, a federal health official said Thursday.

"That's a lot of kids to test," said Dr. Nicole Lurie, assistant secretary for preparedness and response at the U.S. Department of Health and Human Services.

Lurie, the top federal official working in Flint on the city's water contamination crisis, said Thursday that pregnant women and children under age 6 living in homes with unfiltered water that have high levels of lead should drink bottled water "until you know that the (lead) level is lower."

"All children in Flint, 6 and under, should have their blood leads tested before April 1, and that's a really an important message for parents in Flint — please get your child tested," Lurie said.

The state of Michigan offers [free in-home water tests](#) to Flint residents. Primary care doctors in Flint and the Genesee County Health Department offer [lead testing of children's blood](#).

Federal and state health officials also held a press conference Thursday afternoon in Flint to detail follow-up water studies conducted this week in some of the 26 homes where lead levels in unfiltered water exceeded the [150 parts per billion](#) rated capacity of water filters. Water with lead levels exceeding 15 parts per billion is deemed unsafe for human consumption.

The U.S. Environmental Agency retested filtered and unfiltered water in eight of the 26 homes this week and found just one home had lead exceeding 2 parts per billion when a faucet filter was properly used, said Mark Durno, a Flint coordinator for the EPA.

"It gives us a little bit of a data that the filters are doing their job," Durno told reporters. "We're confident that the filters work, and we're comfortable with the filters are higher levels, but we still recommend that sensitive populations — women, children age 6 or under ... drink bottled water."

Federal officials had been alarmed just a week ago by water samples of unfiltered water from the Michigan Department of Environmental Quality that suggested Flint's lead contamination in parts of the city was stronger than residential faucet filters can handle.

Durno said that EPA workers first sample filtered water, then remove the faucet filter to get an unfiltered sample and then change the filter's cartridge to get another sample to compare to the first.

Citywide testing of random homes in Flint will continue for the foreseeable future to monitor whether filters are working properly, Durno said.

"We are very encouraged by those results," said Durno, acknowledging that the tests in eight houses is a small fraction of Flint's 33,000 homes.

Laurie said federal health officials would continue to work with state and local officials to solve the city's lead contamination problems.

"I know people in Flint just want to see this problem fixed and fixed fast and everybody just wants to get on with life," Lurie said. "So do we."

346,000 in Michigan enrolled in plans through HealthCare.gov

Crain's Detroit Business – February 4, 2016, By The Associated Press

LANSING — Nearly 346,000 Michigan residents have enrolled or re-enrolled in health insurance plans for 2016 through the HealthCare.gov marketplace.

The U.S. Department of Health & Human Services said about 180,500 people in the Detroit area had selected or were automatically enrolled in plans.

Nearly 70,000 in the Grand Rapids, Kalamazoo and Battle Creek areas also were in plans while more than 31,000 people in the Flint, Saginaw and Bay City areas signed up for plans.

Open enrollment for 2016 coverage ended Sunday.

About 12.7 million people in the United States selected plans.

Union in talks on how to assist in human trafficking fight

9 & 10 News – February 5, 2016

LANSING, Mich. (AP) - Michigan's largest state employee union is talks about how thousands of government workers could assist more in the fight against human trafficking.

The Lansing State Journal reports (<http://on.lsj.com/1X86AAI>) the Michigan Department of Health & Human Services and United Auto Workers Local 6000, which represents most of the department's employees, are in early conversations about how to get workers more training.

Ray Holman, the union's legislative liaison, says the union has "so many eyes out there and we deal with some of the groups that are at most risk for this."

Michigan has stepped up efforts in recent years to shield minor victims from prosecution and crack down criminals involved in human trafficking. DHHS spokesman Bob Wheaton says that the state is updating its protocols for child welfare workers.

Snyder's Flint task force is battling state departments

Detroit Free Press – February 5, 2016, By Paul Egan

LANSING — Many state departments are cooperating with Gov. Rick Snyder's task force investigating the lead contamination of Flint's drinking water, but getting needed information from certain departments is "like pulling teeth," a task force member said Friday.

Dr. Lawrence Reynolds, a Flint pediatrician who was named to Snyder's Flint Water Task Force in October, did not specify which departments are cooperating with the work of the task force and which are not.

"Some agencies have been very forthcoming; other agencies, it's like pulling teeth to get information," Reynolds said at a meeting of the Flint Water Interagency Coordinating Committee, which Reynolds also sits on. Snyder set up the interagency committee to make sure all state and local agencies, as well as local experts, are working together to address the Flint crisis.

[DETROIT FREE PRESS](#)

[E-mails, Snyder aide was told of Legionnaires' in March](#)

Rich Baird, a top aide to Snyder who sits on the interagency committee, told Reynolds he will do what he can to assure better cooperation. "I am at your disposal to help with any agency," Baird told Reynolds at the meeting in Flint, which was off-limits to the news media but streamed live over the Internet.

So far, the task force has issued two letters in advance of its final report. The first one, in December, placed most of the blame for the Flint drinking water crisis on the state Department of Environmental Quality and sparked [the resignation of DEQ director Dan Wyant](#) and his communications director, Brad Wurfel.

[DETROIT FREE PRESS](#)

[Snyder e-mails: Aides figured Flint was others' problem](#)

Reynolds said work on the task force report, slated for completion later this month, continues. He said the task force is having particular difficulty resolving questions related to the outbreaks of Legionnaires' disease in Flint and Genesee

County that could be related to Flint switching its drinking water source from to the Flint River in April 2014. The city was previously getting its water from Lake Huron, which was treated by the Detroit Water and Sewerage Department.

A failure by the state DEQ to require the addition of needed corrosion control chemicals allowed the corrosive river water to leach lead from pipes, joints and fixtures, sending the toxic metal into an unknown number of Flint households. After months of denials, state officials acknowledged lead poisoning of children in October. The concern about Legionnaires' disease, a bacterial disease, emerged later.

In exploring the Legionnaires' issue, there are "gaps in information," and "there's a recurring theme of lack of coordination and information exchange," and excessive focus on meeting technical requirements rather than focusing on vital health issues, Reynolds said.

DETROIT FREE PRESS

House panel hears blame game on Flint water

Reynolds also said there appeared to be "significant tension" between the Genesee County Health Department and the Michigan Department of Health and Human Services.

"People seem to be refusing to help each other and people may have to be FOIA'd for information," said Reynolds, referring to the need to file an open records request under the Michigan Freedom of Information Act.

"Folks are under a lot of pressure, and folks are lawyering up," but "that needs to cease and desist," Reynolds said.

DHHS Director Nick Lyon attended the session and said a meeting was planned Friday afternoon to try to address any issues between his agency and the county health department.

Chris De Witt, a spokesman for the Flint Water Task Force, declined to elaborate on Reynolds' remarks. Reynolds could not be reached for comment after the meeting.

Snyder, who attended the meeting, highlighted the need for greater cooperation in his closing remarks and said his focus and that of the committee is fixing problems, not assessing blame or politicizing the issue as he said others are doing.

"There's got to be urgency to everything we do," Snyder said.

E-mails released Thursday by the liberal group progress Michigan show that Jim Henry, an environmental health supervisor at the Genesee County Health Department, filed FOIA requests with both the City of Flint and the DEQ to try to determine whether there was a link between the Flint River water and outbreaks of Legionnaires' disease.

According to the records, Henry told state officials in October 2014 about his suspicions that the river water was the cause of an outbreak. The records show that Harvey Hollins, a director in Snyder's office, was made aware of the concerns in March 2015. Snyder has said he didn't find out until January of this year.

Tortured 4-year-old Makayla Maison improving

Detroit Free Press – February 5, 2016, By Beth LeBlanc, Times Herald

The 4-year-old dressed all in pink could barely contain her energy Thursday.

She chattered about Tinkerbell, who was flitting across the TV screen. She poured tiny Legos across her bed and began to assemble them. She slurped banana-flavored yogurt. She sternly chided a large dog named Runt.

"You calm down!" she scolded, after leading the dog out the back door.

Through it all, Makayla Maison couldn't contain her smile.

That smile was missing from most of the photos shown in court a week prior, during a seven-day trial that resulted in the convictions of her father and stepmother on charges of murder, child abuse and torture.

Jurors were shown photos of a thin, frail 3-year-old Makayla, and her deceased 5-year-old sister, Mackenzie.

Mackenzie died May 26 from dehydration and malnutrition, complicated by pneumonia. The same night, Makayla was taken to a children's hospital in Detroit for malnutrition and dehydration.

At three and a half years old, Makayla weighed 17 pounds. Mackenzie weighed 25. On average, a 3-year-old girl weighs 32 pounds or more, while a 5-year-old girl weighs 40 pounds or more.

Experts believed the girls had been underfed for at least a year prior to Mackenzie's death.

DETROIT FREE PRESS

Couple guilty in death of 5-year-old Mackenzie Maison

Their father and stepmother, Andrew and Hilery Maison, were convicted Jan. 29 of first-degree felony murder in Mackenzie's death, and first-degree child abuse and torture of Mackenzie and Makayla.

Andrew and Hilery Maison's sentencing is March 10. They face life in prison.

"The toughest part was when I saw the pictures of Makayla," said Shelby Coffee, Mackenzie and Makayla's biological mother.

"What she looked like when she was taken from the home — it was just horrific."

At trial, photos were shown of a thin and wasting Makayla the night she was taken from her Oak Street home. Jurors also saw photos of a camping trip, where the malnourished girl stared unsmiling at a camera.

"That night when we first came in contact with her, she was obviously in dire need of assistance," said Port Huron Police Detective Brian Kerrigan. "Fortunately, we were able to get her that."

In the six months following Mackenzie's death, Makayla nearly doubled her weight and has held it steady since.

On Wednesday, Makayla received her 4-year-old shots. She weighed 33 pounds, 4 ounces, and measured 35 ½ inches — a gain of more than three inches since July, Coffee said.

"Her speech has improved," Coffee said. "Her motor skills aren't too far behind. She's already caught up a lot."

"You can see just when you walk in that she's happy, she's home, she's in her environment 100 percent."

After Mackenzie's death, Makayla lived with two different foster families and gained weight steadily. With the exception of two broken legs — which medical experts argued could be a result of prolonged malnourishment — Makayla improved.

Kerrigan said investigators kept tabs on Makayla during that time, checking in with Children's Protective Services, obtaining medical records, and stopping by to get information on her recovery. She steadily improved, Kerrigan said.

"She was up and running around," he said. "She was talking. She wasn't shy... She was acting as a 3-, 4-year-old little girl should be."

Senior Assistant Prosecutor Mona Armstrong said the effect Makayla had on those who interacted with her in the months leading up to trial was significant. Armstrong said Makayla "drew in everyone who interacted with her."

"It's such a tragic case on so many levels, it's almost overwhelming, so it's been so meaningful to have Makayla to look at and see a survivor," Armstrong said.

"I wish we would have been able to help sooner, but I have faith she's going to be OK."

While Makayla regained her health in the last half of 2015, Coffee worked toward regaining custody of her daughter.

She had lost custody of Mackenzie and Makayla to Andrew Maison about two years prior to Mackenzie's death after a domestic disturbance and jail time. Coffee said she attempted to visit the girls between 2013 and May 2015, but she either wasn't allowed to see them or was told they weren't home.

Coffee said she went through a reunification course through the foster care system during the last half of 2015. She received psychological and psychiatric evaluations, counseling and parenting classes.

"They wanted to make sure I'd be able to take her in and make sure she was taken care of," Coffee said.

Gradually, she was allowed supervised visits, supervised home visits, and then overnights. On Nov. 16, Coffee regained custody of Makayla.

Coffee said she remains in a 90-day probation period through the foster care system.

Bob Wheaton, a spokesman for the Michigan Department of Health and Human Services, said it is not unusual for biological parents to go through a reunification process prior to being reunited with a child in the foster care system.

While Wheaton couldn't comment directly on Makayla Maison's case, he said the goals of the reunification process are to keep families together and keep children safe.

After a parent and child are reunited, "the foster case would remain open and the foster care worker would still work with the family until the court dismisses oversight, and that would usually be three to six months later."

Makayla still receives counseling, Coffee said, and occupational therapy through an early childhood program at an area school.

Coffee said she and Makayla remain in contact with the foster families who cared for Makayla. On Saturday, Makayla will have a sleepover with her former foster mother.

And Mackenzie still remains a part of their life, a collage of her photos hanging in the living room.

"We were all hurt," Coffee said. "Everybody in the community was hurt by it."

"The community needs to see just for their own closure the one child that survived is doing so good."

Holland city, schools form committee to study lead in children

Holland Sentinel – February 5, 2016, By Amy Biolchini

The city of Holland and Holland Public Schools have drawn together a committee to study blood lead levels of young children living in the city.

The committee — which consists of nine individuals whose experience span disciplines — met for the first time Monday, Feb. 1. Its goal is to understand why children ages 0-6 that live in Holland have elevated levels of lead in their blood.

Talks began in December to form such a task force at the request of Holland Public Schools Superintendent Brian Davis, reacting to a Bridge Magazine report that identified Holland as one of the communities in Michigan whose children have relatively higher rates of elevated blood lead levels than those seen in Flint as a result of the water crisis there.

According to the most recent data available from the Michigan Department of Health and Human Services, the number of children younger than age 6 tested for lead that returned elevated results has hovered at 7 seven percent mark in 2010, 2012 and 2013 in the city of Holland (zip code 49423).

The rates have slightly increased, from 6.7 percent in 2010 to 10 percent in 2011, but back to 7.4 percent in 2012 and 7.7 percent in 2013.

“Elevated” means children have more than five micrograms of lead per deciliter of blood in their system. It’s the level at which the Centers for Disease Control and Prevention recommends public health actions begin.

Unlike Flint, where children were exposed to dangerous levels of lead in the drinking water, officials believe the primary source of childhood lead exposure in Holland is through lead-based paint.

Holland is not one of 13 geographic areas identified by the state as “high-risk” locations for lead poisoning — and so it does not receive funds for monitoring or testing.

In addition to Davis and Joel Dye, director of community and neighborhood services for the city, the committee consists of Holland city employees Tricia Dreier and Danielle Weeks, Ready for School President and CEO Donna Lowry, Holland Hospital Community Outreach Director Jodi Gogolin, Ottawa County Department of Public Health Officer Lisa Stefanovsky, Lakewood Family Medicine clinic supervisor Liza Barry and Lakeshore Housing Alliance Program Coordinator Lyn Raymond.

The committee will be auditing data, processes and contributing factors — and then will be producing a white paper report. The report will include an outline of conditions and recommendations for action, Davis said.

“This report will include an analysis of recent data of children tested for lead poisoning; where we are at as a community related to screening and identifying children to be tested; and a review of internal/external environmental issues impacting levels of lead in the community,” Davis said.

Davis said the committee expects to have produced the report by May 1.

Senate Adopts Emergency Funding Bill To Help Flint Residents With Water Bills

Young Herald – February 5, 2016, By Dennis Edwards

Some families discovered that the amount of lead in their water was "above toxic waste-dump levels", Mrs. Stabenow said.

The bill requires the EPA to alert the public of unsafe water if the operators of the water system fail to do so within a day of learning about the problem.

Snyder also signed a \$28-million appropriation bill to send relief to Flint at the Michigan Press Association Legislative Luncheon in Grand Rapids Jan. 29.

Senator Lisa Murkowski, a Republican from Alaska and a co-sponsor of the bill, proposed making up to \$550 million available to Flint.

Flint is grappling with the health and political fallout over the switch after the more corrosive river water leached lead from old pipes into the system.

Durno says it's important to replace filters and separately clean out any debris that gets caught in the faucet aerator, typically a small screen at the faucet tip.

That bill still has to go to the House of Representatives for approval. The decision was made by an emergency manager appointed by Michigan Gov. Rick Snyder when the cash-strapped city was placed under state control.

Flint, Mich. resident Glaydes Williamson holds up water from Flint and hair pulled from her drain, during the House Oversight and Government Reform Committee hearing to examine the ongoing situation in Flint, Mich., on Capitol Hill in Washington, Wednesday, Feb. 3, 2016, on Capitol Hill in Washington.

Stabenow said the amendment would have paid to fix pipes in Flint, among other help for the city.

Though he was summoned, Earley declined to appear at the hearing, saying that the subpoena came too late to arrange a trip to Washington, DC and citing his duties as the emergency manager for the Detroit public school district.

Wednesday's hearing delved into the poisoning of Flint's water.

The State Senate approved a bill for 30 million dollars to help aid Flint.

Democrats have said officials would have acted sooner if Flint were wealthier and its population predominantly white.

Senate Minority Leader Jim Ananich, D-Flint, said it was unacceptable to offer a "partial refund for a product that was not only unfit for use, but actually poisoned" people.

Democratic U.S. Rep. Brenda Lawrence says all government failed Flint in providing a basic need.

Key speakers included Michigan Congressman Dan Kildee, U.S. Environmental Protection Agency (EPA) Acting Deputy Assistant Administrator for the Office of Water Joel Beauvais and Michigan Department of Environmental Quality (MDEQ) Director Keith Creagh.

More than a quarter of Flint water customers stopped paying their water bills last fall after it was confirmed that their drinking water was contaminated with lead.

The state Department of Health and Human Services had already begun assisting the county in the fall of 2014, and the Legionnaires' investigation had become "very intensive" in early 2015, said Eden Wells, M.D., Michigan's chief medical executive. "What I read tells me they did not get much help for various reasons".

State, union partner on human trafficking

Detroit Free Press- February 5, 2016, By Justin A. Hinkley, Lansing State Journal

LANSING – Michigan’s largest state employee union and its largest state government department are in talks about how thousands of new government workers could join the front lines in the war on human trafficking.

The Michigan Department of Health & Human Services and the United Auto Workers Local 6000, which represents most DHHS employees, are in early conversations about how to train more workers to spot the red flags of trafficking and know where to report their concerns.

“We have so many eyes out there and we deal with some of the groups that are at most risk for this,” said Ray Holman, the union’s legislative liaison. “It’s a potential strategy to help law enforcement and help people in Michigan with this horrible situation.”

DETROIT FREE PRESS

Human trafficking problem growing in Michigan

Michigan already has one of the few statewide protocols guiding child welfare staff, such as Children’s Protective Services and foster care workers, said DHHS spokesman Bob Wheaton. Those protocols were last updated in 2013 should be updated again by the end of the year. The UAW will be involved in that process, Wheaton said.

Holman said the UAW has spoken to department leaders about expanding such training to include thousands of other DHHS employees, such as public assistance workers who help people sign up for food stamps or other benefits. Those workers are spread throughout the state.

DETROIT FREE PRESS

The reality of human trafficking is complicated

Wheaton said the department’s existing training and training through the state prosecutors association is available – though not required – for those workers, and all workers can access tips and other resources online.

“The Michigan Department of Health and Human Services welcomes the opportunity to provide training to our public assistance caseworkers on identifying and reporting human trafficking,” Wheaton said in an e-mail to the State Journal. “We appreciate the union’s interest in addressing this problem.”

Holman said the union would like to make the training more robust and widespread.

DHHS is a key player in the state’s war on human trafficking, which includes everything from prostitution rings to slave labor. Gov. Rick Snyder signed a package of laws in fall 2014 that created two boards focused on the issue, and the department is represented on those boards. Attorney General Bill Schuette has made human trafficking a top priority.

DETROIT FREE PRESS

The scourge of sex trafficking

The National Human Trafficking Resource Center received 152 reports of human trafficking in Michigan to its hotline in 2015, the eighth-highest number in the country.

Bill seeks to stop advertising spending for the Healthy Michigan plan

Crain’s Detroit Business – February 7, 2016, By Lindsay VanHulle

LANSING — A Republican state senator has floated a bill to prevent the state from advertising or encouraging enrollment in the Healthy Michigan Plan, the state’s Medicaid expansion program.

But Sen. Tonya Schuitmaker, R-Lawton, told members of the Senate's health policy committee last week that she revised the bill to clarify that she's only seeking to stop the state from spending money on paid advertising.

"Nothing in this bill prevents state employees from discussing Healthy Michigan, or from providing information written or otherwise or providing it on a website to residents," Schuitmaker said during testimony.

The distinction is important, in part because enrollment in Healthy Michigan has soared past expectations.

As of January, the program has 613,747 participants, up nearly 7,300 members from the month before. The Michigan Department of Health and Human Services projected the program would enroll 320,000 people in the first year of the program, which ended in March, and eventually reach 470,000.

The state spends \$2 million per year on advertising, half of which is federal money, a DHHS spokeswoman said. The remaining \$1 million comes from the state's roughly \$10 billion general fund.

Some Republican senators questioned whether the funds could be better spent on other services within the Healthy Michigan program, rather than on advertising.

"Don't you think this population has been educated enough?" state Sen. Rick Jones, R-Grand Ledge, asked DHHS administrators.

Even though enrollment has far surpassed expectations, enrollment fluctuates month to month, said GERALYN Lasher, DHHS' external relations director. That's because some people become newly income-eligible while others fail to file paperwork to determine continued eligibility or take jobs that have private coverage.

Frequent turnover requires constant education, Lasher said.

The committee didn't vote on the bill. A spokeswoman for Senate Majority Leader Arlan Meekhof said he doesn't consider the bill a priority.

'Gag order' bill advances

The House elections committee approved changes to a new law that prevents municipalities and school districts from sending mass mailings about ballot proposals 60 days before an election.

House Bill 5219, introduced by Rep. Lisa Posthumus Lyons, R-Alto, removes the 60-day limit and also would allow "factual and strictly neutral information concerning the direct impact of a local ballot question on a public body or the electorate, except if the communication can reasonably be interpreted as an attempt to influence the outcome of a local ballot question."

Lyons was the sponsor of the original provision. Gov. Rick Snyder signed the bill, but urged lawmakers to follow it up with clarifying legislation.

On Friday, a federal district judge granted a preliminary injunction barring the state from enforcing the law ahead of the March 8 election. The bill moves to the House for a vote.

Health care building projects spike in 2015, State approved 383 projects worth \$2.78 billion

MiBiz – February 7, 2016, By Mark Sanchez

At \$271.2 million, the expansion and renovation at **Mercy Health's Hackley Hospital** campus in Muskegon stands as one of the largest health care projects in Michigan today.

Now in the design phase and targeted for groundbreaking in May, the Hackley project is also indicative of an upswing in health care construction and capital investments across Michigan, as evidenced by a spike in 2015 in projects requiring state certificate-of-need review.

The number of projects approved during 2015 grew to 383 with a combined value of \$2.78 billion, up from 298 projects for \$1.05 billion in 2014.

There were 348 CON applications submitted in 2015 to the Michigan Department of Health and Human Services for projects with a collective value totaling \$2.40 billion, which compares to 243 applications the prior year for \$1.08 billion. The applications include projects that are still awaiting approval and whose review extended into 2016.

On the project list from the state are an assortment of mundane investments to replace or upgrade medical equipment such as MRI and CT scanners, plus numerous sales of nursing homes throughout Michigan.

The list also includes large and small capital projects to develop new facilities or expand and renovate existing facilities ranging from ambulatory care centers, medical office buildings and even a handful of replacement hospitals. For example, the \$389.5 million plans for a new hospital at **Marquette General** in the U.P. is the single-largest project in the state.

The activity has been ramping up the last couple of years following the economic turmoil of 2008 to 2010, a period where "the brakes were put on" large capital projects as financing was difficult to secure, said Anthony Colarossi, a health care consulting partner at **Plante Moran PLLC**. On top of that came the passage of the Affordable Care Act that created uncertainty, plus the emergence of population health where care providers are compensated by how well they care for the people they serve versus the volume of care they provide.

After adjusting to the new era of health care, health systems are now proceeding with corresponding capital investments, Colarossi said.

"People have kind of figured out their strategies now, and their strategies are quite different than what we saw in the 2000s," Colarossi said.

Much of the focus for health systems today is developing ambulatory capabilities and renovating existing buildings or developing new facilities, Colarossi said. Health systems need facilities that are much more flexible "so it can go back and forth from one type of service area to another very easily so that they're not investing in bricks and mortar in a foolish manner," he said.

During the Great Recession, many health systems also identified inefficiencies in their facilities as they sought to generate cost savings. As the economy recovered and interest rates remained low, health systems began to "implement some of those things to fix some of those inefficiencies" through renovations, Colarossi said.

Construction projects of note in West Michigan that earned CON approval in 2015 include:

- **The Mercy Health** expansion and renovation in Muskegon that will consolidate in-patient care at the Mercy Hospital campus and drive efficiencies by eliminating redundancies with the Hackley Hospital campus about three miles away. The Hackley campus will become an outpatient medical center.
- The \$38.3 million development of eight new operating rooms and three catheterization labs at **Lakeland Hospital** in St. Joseph that received approval in June. Executives declined to discuss the project with *MiBiz*.
- **North Ottawa Community Hospital** earned CON approval in August for a \$7.4 million emergency room renovation and expansion.
- **Spectrum Health** in September received the OK for a \$6.9 million project at **Butterworth Hospital** for its adult bone marrow transplant program.
- In Lansing, **Sparrow Health System** broke ground last May on the Herbert-Herman Cancer Center, a project where the state waived a CON review. In its letter of intent to the state filed in February, Sparrow listed the cost of the 147,000-square-foot, four-story building at \$55 million.

Colarossi expects growth in health care construction to continue for the foreseeable future. Health systems will develop more “centers of excellence” and consolidate physician practices and other professionals into those centers.

“This has legs,” he said. “We’re going to see some old campuses close, especially when you’re looking at what’s happening in rural markets and new buildings come up that are more focused to what really needs to occur in that community. If you haven’t constructed a facility in the last 10 years, you’re going to see significant renovation in order to make it more specific to the identified centers of excellence that are going happen at that campus.

“This is a 10-year stretch that you’re looking at.”

Proposed measure would bar paid ads to promote the Healthy Michigan Plan WIN Country – February 7, 2016, By John McNeill

LANSING (WKZO-AM) -- A bill that would restrict advertising by a government agency has been floated in the Michigan Senate, but apparently needs work.

The measure proposed by Sen. Tonya Schuitmaker, R-Lawton, would bar the Department of Health and Human Services from advertising to increase the enrollment of the state’s Healthy Michigan Plan, which has greatly expanded the number of people who are now eligible for Medicaid.

DHHS had hoped to eventually sign up 470,000 recipients for the program, but in the first year they have already signed up nearly 614,000.

DHHS currently spends about two million a year, half of it from the federal government, and say most of it is spent on educational programs to help recipients use the program more effectively or to show new recipients how to sign up.

The Senate Health Policy Committee took testimony on the proposal this past week, but didn’t take any action.

Some lawmakers questioned if the money wouldn’t be better spent on programming. Another wondered if it was something that should be taken up during budget talks.

Schuitmaker says she only wants to cut off paid advertising. She says the staff would still be free to provide printed information, put it up on their website or council residents on the program.

Michigan marriage rate hits 8-year high, and other marriage trends

MLive – February 8, 2016, By Julie Mack

A total of 57,071 marriages were performed in Michigan in 2014, the highest number since 2006.

Meanwhile, Michigan's divorce rate is now below what it was in 1970, according to the vital statistics division of the Michigan Department of Health and Human Services.

State and Census statistics on marriage in Michigan offer interesting insights into how the institution has changed over time.

As Michiganders prepare to celebrate Valentine's Day, here's a look at what the numbers reveal about love and marriage.

1. Marriage has been generally trending down for 35 years.

After dropping dramatically during The Depression, the number of marriages in Michigan marriage rate went up during and after World War II and soared again the 1960s as Baby Boomers hit adulthood in the late 1960s.

Marriage rates have generally trended down since 1970, hitting rock bottom so far in 2009, the worst year of the recession.

In 2009, there were 10.8 marriages for every 1,000 people in Michigan. It's been inching up a little since and the rate was 11.5 in 2014. That's still about half of what it was 30-some years ago.

[Click here](#) to see Database: 2000-14 marriage trend by county

In raw numbers, the 57,071 marriages in 2014 compares to 94,486 in 1973, the peak year of marriages in Michigan.

2. Michigan residents are waiting longer to get married.

In the mid-1960s, the median age of a first-time Michigan bride and groom were 20 and 22 respectively.

By 2014, that went up to 26 for brides and 28 for grooms marrying for the first time.

Meanwhile, marriages by people under age 20 have plummeted.

In 2000, there were 3,513 brides and 1,263 grooms under 20; in 2014, it was 1,473 and 573 respectively. That means less than 3 percent of weddings involved a teenage bride and/or groom.

3. About a third of Michigan brides and grooms have been married before.

In 2014, about 68 percent of Michigan brides and grooms were getting married for the first time.

About 23 percent of the 2014 brides and grooms were starting a second marriage and 9 percent had been married at least twice before.

For second marriages, the median age was 40 for brides and 43 for grooms.

4. More Michigan residents are never marrying at all.

While slightly more people are getting married and fewer people are getting divorced, U.S. Census numbers also reflect a significant increase in never-married adults.

[Click here to see Database: Marital status of adults by county](#)

In 2005, 22 percent of Michigan adults over age 20 had never been married; by 2014, it was 27 percent, according to U.S. Census estimates.

Compare that to 1960, when 9 percent of adults over age 25 had never married, according to the Census Bureau.

5. Whites are more than twice as likely as African-Americans to be married.

Among Michigan residents age 15 and older, an estimated 52 percent of whites are married compared to 25 percent of African-Americans, according to 2014 Census estimates.

Among other minorities, 41 percent of Hispanics, 61 percent of Asians and 40 percent of Native Americans age 15 and older are married.

5. Weddings in Michigan peaked in 1920 and 1946, immediately after World War I and World War II.

In 1920 and again in 1946, there were almost 28 marriages for every 1,000 Michigan residents -- the highest marriage rates since 1900.

Ironically, 1946 also has Michigan's peak divorce rate as Americans readjusted to life after World War II.

In 1946, there were more than 10 divorces per 1,000 Michigan residents — a rate not seen since.

6. There were 1.92 marriages in Michigan for every divorce in 2014.

That's the highest ratio since 1986, when there were 77,815 marriages and 39,553 divorces.

The lowest ratio of marriage to divorce occurred in 2010 when there were 1.55 weddings for every divorce.

7. August was the most popular month for weddings in 2014.

June was the second-most popular and September was third. In all, 51 percent of weddings in Michigan occurred between June and September.

The least-popular month: January. About 18 percent of weddings in 2014 occurred between November and February.

Ramirez: Don't turn back the clock on childhood immunizations in Michigan
Lansing State Journal – February 7, 2016, By Rose Ramirez, MD

– Rose Ramirez, MD is the president of the Michigan State Medical Society and outspoken advocate for child immunizations.

In 1948, the Michigan State Medical Society produced a short film called “Lucky Junior” that detailed and demonstrated the miracles being offered children in the 1940s through the development of new and lifesaving immunizations.

The old black-and-white video offers a fascinating and unique look at how a long time ago people recognized and tackled a problem – and made a difference.

We recently stumbled across the film during a review of the MSMS archives, and couldn’t believe how far we’ve come – and how relevant the film remains nearly 70 years later.

According to the film, between 1921 and 1948, childhood deaths from diphtheria in Michigan dropped from 954 to 23.

Childhood cases of smallpox were almost non-existent in ’48, after 4,500 instances a few decades earlier.

And childhood deaths from pertussis – or whooping cough – the film explained had plummeted from more than 300 to 63.

There were 0 cases of diphtheria in Michigan in 2015, 0 cases of small pox, and 0 deaths from pertussis. The disappearance of the deadliest childhood diseases had very little to do with luck, and everything to do with immunizations.

We’ve come a long way in the last seven decades, but the truth is, we’ve come a long way since January 2015, too.

That’s when the state adopted new rules requiring parents who wish to obtain a non-medical exemption from the state’s childhood immunization requirements to get the facts about immunizations and sign a consent form at their local County Health Department. It’s a common sense rule that protects every parent’s right to make medical decisions for their families, while ensuring they have every opportunity to safeguard their kids against deadly diseases and outbreaks.

It’s also a rule that’s making a huge difference.

Since the state adopted the January 2015 reform to make immunizations and educational information more available to parents, we’ve seen those waiver rates plummet.

Just last week the Michigan Department of Health and Human Services released new numbers showing that in 2015 waiver rates plummeted 39 percent across Michigan.

Here in the Lansing area, waiver rates are down 29 percent in Eaton County, 30 percent in Ingham County and 55 percent in Clinton County.

All told, there were 8,000 fewer waiver requests in 2015 than in the previous year, meaning thousands of children are safer than ever before in the face of deadly but preventable diseases.

Medicine is light-years ahead of where it was nearly 70 years ago, but here in 2016, some in Michigan want to turn back the clock on our children’s health.

Late last year two dangerous bills were introduced – House Bills 5126 and 5127 – to undo state rules that ensure parents get the facts before opting their kids out of being immunized against deadly diseases before they head off to school.

Immunizations work. And so does the reform that ensured parents have access to reliable information before opting children out of lifesaving vaccinations.

Two generations ago, surviving vaccine-preventable diseases might have taken a stroke of “luck.” Our parents, grandparents and their physicians saw that children were dying from too many preventable diseases. They took action and saved thousands of lives. Whether in 1948 or 2016, that’s what physicians do. That’s what parents do.

New cures, treatments and immunizations continue to wipe out preventable diseases – when we let them.

Let’s not turn back the clock on Michigan children’s health. We hope lawmakers will reject HBs 5126 and 5127.

<http://www.lansingstatejournal.com/story/opinion/contributors/viewpoints/2016/02/07/ramirez-turn-back-clock-childhood-immunizations-michigan/79882072/>

Disaster day by day: A detailed Flint crisis timeline

Crain’s Detroit Business – February 7, 2016, By Bridge Magazine

This timeline seeks to present as complete a picture of the Flint water disaster as can reasonably be provided at this time from information currently in the public sphere.

There are few completely new revelations here. The intended value here is to present concerned residents and policymakers with the full weight, detail and step-by-step context of the Flint saga all in one place and in one narrative. What transpired? Who said what? Who did what? What are the details? Answering those questions as completely as possible at this point in time requires the more than 30,000 words in this timeline.

We hope those who invest the time to read the entire timeline will find it useful in sorting fact from fiction and spin from credible analysis. We also hope this timeline helps counteract against the present and future risk of revisionist history in all directions.

In many places, the **Michigan Truth Squad** adds clarifying commentary and questions below to help readers interpret events – and to ask additional questions themselves.

The Truth Squad is a project of the nonprofit, nonpartisan **Center for Michigan’s Bridge Magazine**. Center for Michigan President and CEO John Bebow compiled this timeline and authored the Truth Squad analyses herein. Bridge Editor David Zeman fact-checked and edited this report.

We compiled this timeline from approximately 1,000 pages of public documents and published reports, including: **Michigan Department of Environmental Quality** and **Michigan Department of Health and Human Service** email records first obtained under the Freedom of Information Act and published by **Virginia Tech** professor and water expert Marc Edwards; email records released by Michigan Gov. Rick Snyder; other local, state and federal documents from the city of Flint, **Michigan Department of Treasury**, Michigan Auditor General, and **U.S. Environmental Protection Agency**; a peer-reviewed study published in a February 2016 medical journal; and, various media reports as cited below. State and federal government directories were accessed to identify titles for public employees referenced in this timeline.

Numerous state and federal investigations of the Flint crisis are ongoing. Therefore, a wide range of additional documents and revelations may eventually become public.

This report will continue to be updated, so come back often:

Please see the note I sent below. We are inundated with FOIA requests and subpoenas related to Flint. Would it be possible for us to have someone from DTMB assist us with running queries in the e-mail server that might help to identify e-mails that potentially fit the various requests?
Thanks,

Mikelle

Subject: strategy to consider re: FOIA requests

I was complaining about all of the work related to collecting e-mails and documents for FOIA requests. My husband who works in IT suggested that it is possible for us to ask someone from DTMB to set up a data base tailored to the parameters/criteria provided in the FOIAs and subpoenas (query the e-mail server by key words and dates). He said that someone would then need to sort out what

is collected to make sure it fits the requests, but it would free up staff time to do the actual searches.

Bill said we would want a senior IT person who could hit the ground running without a lot of hand holding. If we pursue this he said that they should document each query they've run. The person would also need to correlate the results in a format that can be reviewed by others.

I could run it by Linda Pung to see if this is a possibility within our tight timelines. One more thing we'll need to pay for but it might provide some relief to overwhelmed staff. Thoughts?

DHHS info aimed at food stamps issues

Traverse City Record Eagle – February 7, 2016, By Michael Walton

That's how Riverview Terrace resident Priscilla Townsend described communications issued by state Department of Health and Human Services officials this week about food assistance. The state-issued explanations were disseminated at the public housing complex where Townsend lives.

"My reaction is thank you for the information," she said. "It's a little late but it's timely to help us now. I'm glad for an explanation finally."

The information in question could help Riverview Terrace's elderly or disabled residents who in 2015 watched their monthly food stamp allotments drop from as much as \$150 per month to as little as \$16.

The cuts resulted from a provision in the 2014 federal Farm Bill designed to curb costs tied to the federal Supplemental Nutrition Assistance Program — the formal name for federal food stamps.

Several states like Michigan, before the Farm Bill changes, followed a practice known as "Heat and Eat" which allowed people who received as little as \$1 in automatic low-income home heating assistance annually to qualify for increased SNAP benefits.

The Farm Bill raised the \$1 requirement for increased SNAP benefits to more than \$20. Michigan was one of only four states where officials declined to increase the automatic home heating payments from \$1 to more than \$20 after the Farm Bill passed.

But Townsend has long argued the Farm Bill's heat and eat changes were irrelevant to most of her neighbors who rely on food stamps. Many of them have long qualified for more than \$20 in heating assistance through Michigan's home heating credit program, she said.

Many simply never realized they qualified and hadn't collected the assistance because utility costs are wrapped into their rent.

Townsend, her neighbors, and residents and officials from other public housing complexes contend none of that was explained properly when the Farm Bill changes went into effect.

State Rep. Larry Inman, R-Traverse City, said he recently met with DHHS officials to discuss avoiding such problems in the future. He said DHHS officials agreed they could have explained the Heat and Eat changes better and assured him they intended to fix the problem.

"What we're going to do is set the timeline for 30 days from now and get back with them and say 'OK, tell us what you've done,'" Inman said.

The DHHS information dated Feb. 2 and sent to the Traverse City Housing Commission — the organization that runs Riverview Terrace — explains what the home heating credit is and who qualifies for it, including low-income housing residents who pay heating costs as part of their rent.

DHHS Program Manager Cindy Ooley, who wrote a memo attached to the information, could not be reached for comment.

DHHS spokesman Bob Wheaton said Ooley sent that information to landlords and housing complexes in her programming area, which includes Grand Traverse, Leelanau and Kalkaska counties.

Wheaton said late last month that DHHS officials planned to take statewide steps to further inform clients about how home heating credits impact food stamps. That position was a reversal after Wheaton one day earlier said officials from his department didn't plan to take any statewide action regarding clients' food stamps complaints.

Wheaton said Friday that DHHS officials continue to work on those communications.

"That could go out as soon as next week," he said.

Flint e-mails: CDC voiced concerns over Legionnaires actions

Detroit Free Press – February 9, 2016, By Matthew Dolan, Elisha Anderson, Paul Egan and John Wisely

More than a year ago, e-mails among officials show deep concern behind the scenes about the quality of the city's water.

More than eight months before Gov. Rick Snyder disclosed a deadly Legionnaires' disease outbreak in the Flint area, federal health officials worried a lack of cooperation in Michigan could be hampering the public health response.

Thousands of pages of e-mails obtained by the Detroit Free Press through the Freedom of Information Act show increasing concern about the quality of the Flint's drinking water as tensions grew over a lack of coordination to combat the waterborne disease.

County health officials were warned for reaching out to federal experts for help while they struggled to persuade Flint city officials to provide needed information, the e-mails show. Others in e-mails wondered about ethical breaches and the possibility of a cover-up.

[DETROIT FREE PRESS](#)

[Family of lead-poisoned Flint girl, 2, files suit](#)

In sum, a review of the e-mails provided by Genesee County from several public-information requests appear to illustrate the inability, if not unwillingness, of city and state agencies to share information with the county as it investigated multiple Legionnaires' cases. The clash among bureaucrats went on privately for months despite growing fears inside Flint among residents that something was deeply wrong with the city's drinking water.

"We are very concerned about this Legionnaires' disease outbreak," Laurel Garrison of the Centers for Disease Control and Prevention, wrote to Genesee County health officials in an April 27, 2015, e-mail. "It's very large, one of the largest we know of in the past decade, and community-wide, and in our opinion and experience it needs a comprehensive investigation."

Garrison added in her e-mail that "I know you've run into issues getting information you've requested from the city water authority and the MI Dept of Environmental Quality. Again, not knowing the full extent of your investigation it's difficult to make recommendations, and it may be difficult for us to provide the kind of detailed input needed for such an extensive outbreak from afar."

There were at least 87 cases across Genesee County during a 17-month period, including nine deaths, but the public was never told about the increase when it was happening — even after an initial wave of more than 40 cases were under investigation by early 2015.

It is unclear whether swifter action by government officials could have prevented a return of the outbreak last summer. But a public health investigation is ongoing. Legionnaires' disease is a pneumonia caused by bacteria in the lungs. People get sick if they inhale mist or vapor from contaminated water systems, hot tubs or cooling systems, or in some cases, showers.

Genesee County Health Department officials could not be reached for comment Monday night.

Typically, Genesee County saw between six and 13 Legionnaires' cases a year, according to officials. In 2014, the number jumped to 42. In 2015, there were 45 confirmed cases.

Officials investigating the outbreak in 2014 worried about disclosing a suspected cause.

Liane Shekter Smith, the head of the Office of Drinking Water and Municipal Assistance for the state Department of Environmental Quality contacted state health officials "a couple of times" to discuss the Legionnaires' outbreak in 2014, according to e-mails.

"She was concerned that an announcement was going to be made soon about the water as the source of the infection; I told her the Flint water was at this point just a hypothesis," Susan Bohm of the Department of Health and Human Services wrote to officials in Genesee County in an e-mail dated Oct. 21, 2014.

Last week, Snyder announced Shekter Smith's termination, saying "putting the well-being of Michiganders first needs to be the top priority for all state employees."

The e-mails released Monday also showed how local officials struggled to contain the outbreak.

On Feb. 10, 2015, Genesee County Health Department epidemiologist Shurooq Hasan wrote to an outside expert about 47 Legionnaires' disease cases in 2014, which was almost four times the number of cases in 2013.

"We have investigated a hospital as a potential source for the disease, but have expanded our investigation to include the city water supply," Hasan said in the e-mail.

"Of our 47 cases, 25 cases have occurred within the city water supply distribution system. No common links have been found between the cases. The majority of our cases are home bound immune-compromised individuals who have not traveled and are not readily mobile," he wrote.

Hasan said those stricken were in such bad condition that they are unable to answer questions that would assist with the investigation.

On June 8, 2015, Jim Collins of DHHS e-mailed several officials at the county health department saying he had spoken with officials at the federal Centers for Disease Control and Prevention that morning about the Legionnaires' issue. He then chastised county officials for talking to the CDC without state approval.

"Relative to communications around the investigation, I believe that CDC is in agreement that their involvement really should be at the request of the state, rather than the local health department," Collins said. "To be clear, we do value the skills and resources of our CDC colleagues, but we also recognize that their involvement needs to have some structure," and "I want to reinforce the necessity that investigation communications from the Genesee County Health Department need to be directed to staff at the MDHHS."

By Dec. 5, Tamara Brickey, the Genesee County Health Department's public health division director, said in an e-mail to other county health officials that "the state is making clear they are not practicing ethical public health practice."

"Now evidence is clearly pointing to a deliberate cover-up," Brickey wrote. "In my opinion, if we don't act soon, we are going to become guilty by association."

Snyder publicly revealed the Legionnaires' outbreak on Jan. 13 of this year, saying he had learned of it just days earlier. A spokesman for the governor Monday night reiterated that the governor acted quickly after he learned of the outbreak.

DETROIT FREE PRESS

E-mails: Snyder aide was told of Legionnaires' in March

But last week, other e-mails released by the liberal group Progress Michigan showed an aide in Snyder's office was notified in March 2015 — more than nine months before Snyder said he learned of the problem — that there was an increase in Legionnaires' disease cases in Genesee County. The aide, Harvey Hollins, said in an interview last week he did not brief the governor on the issue at the time because he told state environmental department officials to gather more information and make their own recommendation if warranted.

Public notifications about such outbreaks are typically handled by the local health departments, Geralyn Lasher, spokeswoman for the Michigan Department of Health and Human Services, said Monday.

Lasher said the state provided help to the Genesee County Health Department on wording for a public press release, but she was unsure if the department ever released it.

Flint's switch to using the Flint River as its water supply in April 2014 was followed almost immediately by complaints from residents about discolored, pungent water that had caused a number of ailments. Local and state officials insisted for months the water was safe to drink but reversed course after independent testing discovered unsafe lead levels throughout the system believed to be caused by leaching from lead piping.

Flint is now under a state of emergency because of the lead issue. Today, state officials say they have been unable to link the Legionnaires' outbreak definitively to the Flint River water supply.

County health officials feared as far back as the fall of 2014 the outbreak was connected to the switch to using the Flint River for drinking water.

The new e-mails show other state health officials investigated the outbreak at least a year before the governor's public announcement.

On Jan. 27, 2015, Michigan Department of Health and Human Services epidemiologist Shannon Johnson e-mailed the county health department about the Legionnaires' disease issue, saying "at this point, the priorities in the public health investigation are to determine the scope of the outbreak and to define as clearly as possible the characteristics of the cases of Legionnaire's Disease ..."

"A current map of the municipal water system needs to be obtained and cases' residences mapped in relation to the water system," Johnson said.

Overall, county officials express concerns about a growing number of people in the Flint area contracting Legionnaires' disease.

The state Department of Health and Human Services had begun assisting the county in the fall of 2014, and the Legionnaires' investigation had become "very intensive" in early 2015, according to Dr. Eden Wells, Michigan's chief medical executive.

The first wave of 42 cases was commonly known within the state health department, Wells said, but the agency did not take the information to the governor until confirming a second wave of 45 cases and analyzing them together.

But back on Jan. 27, 2015, a county health official expressed frustration in an internal e-mail that he couldn't obtain information from local and state officials to investigate suspicions the water supply was behind the Legionnaires' outbreak.

"Initially the water plant was cooperative, but since the beginning of November they have not responded to multiple written and verbal requests. Howard Croft has not responded the email that I sent yesterday morning, either," James Henry, a county environmental health supervisor, wrote in the e-mail.

"I have explained our responsibilities to investigate and that our intent to work together with the City to identify potential risks so they can be reduced or eliminated. I was hoping to avoid FOIA, but we are getting nowhere."

In another e-mail, written a day earlier, on Jan. 26, Henry wrote: "MDEQ, Mike Prysby and Steve Busch declined to meet with our office. They did not have any comparable information regarding other public water systems relative to Legionella or Heterotrophic bacteria. They encouraged us to conduct our investigation and mentioned that they could assist with obtaining information from the water plant. I explained that they are the regulatory agency and participation is expected."

On Feb. 5, Howard Croft, the city of Flint's public works director, alerted Henry about "another person who is reporting a rash on their child."

A note from a doctor, Croft wrote, asserted that the woman's son "breaks out when he is in the bath with the city water." He asked Henry to work with the woman and supply any needed data that could "help determine the cause."

Henry responded less than two hours later. He didn't provide the data but instead spelled out how he said the city had not responded to the county's earlier request for information.

Henry said the county health department attempted as far back as November 2014 to obtain information about the city's water system.

"Your office has not provided a return phone call or response to emails," he told Croft in the e-mail.

In January, Henry said that he also filed a Freedom of Information request with the city to try to obtain information about city water, but his request did not provide what he sought.

"I am still hopeful that we can work collaboratively to protect the health of the community and resolve any issue with the Flint water supply." Henry wrote.

By November 2015, Henry had grown frustrated by the lack of cooperation he said he received from state environmental officials.

The Michigan Department of Environmental Quality “reminds me of a stubborn 2yr old child,” Henry wrote on Nov. 6 to Genesee County Health Officer Mark Valacak. “Instead of doing what is right, they’ll willfully take another spanking just to be defiant.”

On Dec. 4, Henry recapped events over several months in an e-mail to other county health officials and singled out a specific state health department official he said had sabotaged their Legionnaires’ disease investigation.

“I think deaths could have been avoided, had he not!” Henry said. He said he thought state officials were motivated to impede the investigation because they “were concerned that Genesee County’s largest U.S. legionella outbreak, would implicate the Flint water system, for which they were responsible.”

Henry wrote that “some of the people at the state agencies are simply criminals,” and “I do find it rather impressive how good they are at covering their tracks.”

Doctor: Info ‘being withheld’ from Flint task force

The Detroit News – February 5, 2016, By Jonathan Oosting

Lansing – Some unidentified state agencies are resisting requests for information from a task force appointed by Gov. Rick Snyder to investigate the Flint water contamination crisis, task force member Dr. Lawrence Reynolds said Friday.

“Unfortunately, first on the list is the legionella issue,” said Reynolds of Mott Children’s Health Center, referencing spikes in the fatal Legionnaires’ disease after the city began using Flint River water in April 2014.

“Some agencies have been very forthcoming, other agencies it’s like pulling teeth to get information, and it can get real frustrating and doesn’t facilitate good communication,” he said.

Reynolds, who serves on the task force, raised his concern during a meeting of the Flint Interagency Coordinating Committee attended by Snyder and top aide Rich Baird, who vowed to help Reynolds push through any bureaucratic resistance.

“I am at your disposal to help with any agencies in the state and also to try to help with agencies outside of the state department agencies,” Baird said.

State officials have said they cannot prove a clear link between the Flint water switch and the Legionnaires’ outbreak, which included 87 identified cases and at least nine deaths between June 2014 and November 2015.

Emails released Thursday by liberal advocacy group Progress Michigan show health officials and Snyder aide Harvey Hollins, who was also present for Reynolds’ comments, were alerted to the Legionnaires’ issue more than 10 months before the governor held a press conference to inform the public in January.

The Detroit News first reported Jan. 23 that an expert on Legionnaires’ disease for McLaren Regional Medical Center said Flint’s contaminated water likely contributed to the Legionnaires’ outbreak in Genesee County, where the bacteria was found in a hospital’s water supply.

The Flint task force has been working to wrap up its investigation this month, but Reynolds said members may need to reinterview some officials because of recent developments.

"If we don't ask the question, we don't get the answer," he said. "But there's clearly information that's being withheld."

Task force spokesman Chris DeWitt said he couldn't elaborate on Reynolds' comments, and Reynolds did not immediately return a call requesting further comment.

Reynolds is also a member of the interagency coordinating committee that met Friday for the second time. The committee is charged with, among other things, creating an incident action plan to help ensure safe drinking water and addressing the consequences of elevated lead levels.

Other panel members present Friday included Hollins, Department of Environmental Quality Director Keith Creagh, Department of Health and Human Services Director Nick Lyon and Dr. Mona Hanna-Attisha of the Hurley Medical Center in Flint, who first exposed elevated lead levels in children following the switch to Flint River water.

Reynolds told members that "there seems to be significant tension" between the state health department and the Genesee County Health Department, suggesting some people are refusing to talk to each other and have had to use Freedom of Information Act requests to obtain information.

"There's some crude terms I could use to describe what's going on right now," he said, "but that needs to cease and desist."

Lyon, seated next to the governor, told Reynolds that his chief deputy director Tim Becker was set to meet with Genesee Health Officer Mark Valacak later Friday afternoon.

"They're going to start addressing those issues," Lyon said.

Snyder created the interagency committee by executive order on Jan. 11 to "facilitate the collaboration and communication" between the state, local governments and independent experts on response and recovery efforts in Flint.

The committee is not a public body and Friday's meeting was not open to the public, but it was streamed online "because of the great public interest in the committee's work, and in the spirit of transparency," said Snyder spokesman Dave Murray.

"The situation Dr. Reynolds described is exactly the frustration Gov. Snyder has spoken about regarding the culture in some state departments that was a problem and needed to be changed," Murray said. "The governor is actively taking steps to rectify the situation and ensure that authorities get the information they need when they need it."

"We are glad that Dr. Reynolds raised the issue directly with us today. We will not tolerate any departments withholding information from the task force."

The governor addressed the committee in brief remarks at the beginning and end of Friday's meeting, noting recent approvals of supplemental state funding requests to address the Flint crisis.

"We have limited resources and we want to make them count the most, and the more we can coordinate, the better off we are," he said.

How racial segregation and political mismanagement led to Flint's shocking water crisis

The Washington Post – February 8, 2016, By Jessica Trounstein

As much of the country knows by now, the water supply in Flint, Mich., is badly contaminated with lead. The water has poisoned an entire city and has probably irreparably damaged a significant share of Flint's children. And it could have been prevented.

This is a story of political failure. The federal structure of overlapping and mismatched government authorities ensures that public services vary from place to place, and makes it easy for officials to pass the buck. Extreme residential segregation in the United States means that the people who are most likely to suffer in this system are the poor and people of color.

A little history of urban water

Flint's is not the first case of harm caused by a municipal water supply. In the late 19th and early 20th centuries, there was a substantial mortality penalty to living in cities. Sewer and water systems were built before modern understanding of disease transmission developed. Many early sewers couldn't handle growing populations and frequently overflowed into the streets.

Worse, some cities dumped unfiltered waste upstream of their water intake. In 1900, infectious and parasitic diseases killed nearly 8 in every 1,000 residents, accounting for more than 45 percent of all deaths and more than 60 percent of deaths among children.

Over the next 40 years, water filtration and sewage treatment led to dramatic health improvements, all but eliminating death by typhoid, cholera and diarrhea. But these benefits were neither inevitable nor universal. At the beginning of the 20th century, some cities spent as little as \$100 per person on municipal services. Others spent more than \$900. The well-off got better services, including better water.

In the United States today, some people still have access to good schools, well-paved and plowed roads, sewers that never overflow, public parks with safe swing sets and restrooms, adequately staffed police and fire forces, clean water, and safety nets when their means are limited. Others do not.

All of that varies by neighborhood, city and state, a result of our federal system. Federalism means that different communities are allowed to raise and spend funds as they wish, whether or not to raise taxes, issue bonds, or replace lead water pipes.

The people who have access to high-quality public goods and services are more likely to be white and well off; those who do not are likelier to be racial or ethnic minorities and low income. That's as true today as it was in 1900.

The tangle of systems bringing water to U.S. citizens

National, state and local governments all have authority over building public infrastructure and monitoring drinking-water quality. Water delivery is largely handled by municipal governments and special districts, creating a patchwork of systems.

A home-rule charter adopted by Flint residents in 1929 granted the city government the authority to install and maintain its own sewers and waterworks. Flint once was a boom town. Its population doubled between 1920 and 1960, and the city's water supply from the Flint River could not keep up with the increased demand.

City leaders planned to build a pipeline to Lake Huron, but a local millionaire conspired with public officials to defraud the city in a land deal. Voters were disillusioned. Instead of building the pipeline, Flint entered into a 30-year contract to buy water from Detroit's Water and Sewer System, leaving it at the mercy of Detroit's decisions and price increases.

As the auto industry tanked, Flint went from boom to bust, losing roughly half of its population between 1960 and 2010. At the same time, city expenditures continued to rise. The general fund deficit had reached \$26.6 million by 2001.

In the federal system, the national and state governments are sovereign. Cities are not. States delegate authority to cities to govern themselves – but they can also take that authority away. Michigan's governor, Rick Snyder, was elected in 2010 on a platform promising austerity. One of his early moves was to take over insolvent local governments, placing them under state control with the goal of balancing their budgets. In 2011, Snyder appointed an emergency manager to govern Flint.

Michigan's emergency managers have broad authority to cut expenses, reorganize city government and renegotiate city contracts. And – this is important – when under state control, local elected officials can exercise the powers of their offices only with the manager's written approval.

Emergency managers are accountable to the governor. In Flint's case, this was a governor who did not receive a majority of the vote from the city's residents. Flint was being ruled by an official who was not elected by or responsible to Flint's residents. My work shows that when rulers are not accountable to their subjects, they have an easier time making decisions that defy the preferences and even best interests of those people.

In April 2014, supposedly to save money, the emergency manager changed Flint's water source to the Flint River — a noxious, polluted body of water — while awaiting a new pipeline to the lake. We know now what happened next.

Who's in charge?

Many of Flint's water pipes are made of lead, and an additive needed to be added to the water to prevent that lead from leaching into the water. But it seems that none of the officials who could have made the choice to treat the water did so. Neither the Flint water staff, nor the Michigan Department of Environmental Quality, nor an engineering firm hired by the emergency manager to upgrade the Flint water treatment plant determined that the water should include those critical corrosion-controlling additives.

And so, as the water corroded the pipes, those pipes delivered lead-poisoned water to Flint's residents.

Residents began complaining about the water quality immediately, and experts pointed out elevated levels of contaminants, but it took nearly a year for the Michigan Department of Environmental Quality to document the problem. And even when it was discovered, MDEQ chose not to compel the Flint water staff and emergency manager to treat the water. After 18 months the water source was changed back, but the damaged pipes continued to leach lead.

Who was in charge? Everyone, and no one. Different people within Flint's city government, the emergency manager, the Michigan governor's office, the state Department of Environmental Quality, and the state Department of Health and Human Services had — and continue to have — a hand in managing Flint's water quality and delivery.

This overlapping structure of governments, with both appointed and elected officials, makes it possible for problematic decisions to slip through the cracks and makes it easy to shift blame.

But doesn't the buck stop somewhere? Government institutions are structured so that an official at the top (whether a general or a governor) is the final decision-maker, responsible for what happens. In a democracy, elections hold these people at the top accountable.

Segregation now

But what happens when the democratic process is undermined? If Flint had been mostly white and mostly well off, it is possible that the MDEQ and governor would have listened more attentively. But what's even more likely is that the deep financial woes that led to this series of disastrous choices would never have taken place.

Over the past 200 years, zoning policies, housing policies, lending policies and transportation policies passed by federal, state and local governments have contributed to the segregation of people of color and the poor. The spatial accumulation of disadvantaged means that some cities have the luxury of providing clean water to their residents — while others struggle, as is true in Flint, where more than 40 percent of residents live in households below the federal poverty line and 1 in 4 residents is unemployed.

There are many different ways to measure segregation. One clear metric is the difference in racial demographics and household wealth between central cities and suburbs. In 2000, city/suburban differences in the Flint metro area were among the highest in the nation. Here's how Flint fits:

A tale of two cities

Flint's neighbor directly to the east is the city of Burton, which receives water from Lake Huron through Detroit's system. Burton's population is 86 percent white, the median household income is nearly \$44,000 per year, and the median home is worth almost \$75,000. In Flint, 64 percent of the residents are people of color, the median income is just under \$25,000 per year, and the median home is worth about \$42,000.

In 2012, Flint had a debt burden of about \$1,600 per person, compared with only \$400 in Burton. Between 2007 and 2012, many city governments saw expenditures fall as the recession took a toll on municipal budgets. In Flint, spending declined by \$225 per resident — in Burton, spending actually increased by \$1 per capita. And Flint residents pay the highest water and sewer fees in the metropolitan area. In 2014, the average water bill in Flint was \$140, compared with only \$58 in Burton.

The fact that Burton has clean, inexpensive water and Flint does not is the result not just of the variation that federalism allows, but also of two centuries of accumulated structural racism (in which institutional forces that impose rules and laws by racial categories reinforce and reproduce racial inequalities). It is no coincidence that as Flint slid further away from economic stability, it was becoming a majority-black city.

Eventually this economically depressed, largely minority community was taken over by the state, which then proceeded to make a series of unsound decisions that no one in the many overlapping governmental agencies responsible for water quality managed to notice. When finally alerted to the problem, these officials tried to shuffle the blame rather than fix the problem.

Meanwhile, Flint's neighboring white towns were able to provide good services and clean water for their residents. The structural benefits that brought them good housing, good jobs, good roads and good schools meant they have enough money to pay for those services and that their elected and appointed officials actually monitor the services, lest they lose their jobs.

So what could have been done in Flint? The Michigan Department of Environmental Quality should have recognized the problems with Flint's water before the switch was made. Corrosion controlling additives should have been included from the outset.

Federal and state governments should be responsible for ensuring a minimum level of basic services. Clean water is a good place to start.

Flint residents to be hired for water testing

The Detroit News – February 8, 2016, By Jonathan Oosting

Fifty Flint residents will be hired for supplemental state water testing teams working in the city, Gov. Rick Snyder announced Monday.

Orchards Children's Services in Genesee County and Flint YMCA's Safe Places Program will help and train the residents under a new partnership with the state.

"The people of Flint deserve timely action on emergency efforts to help the city move toward recovery," Snyder said in statement. "We realize our water testing teams need more manpower to get the job done."

The state is in the midst of a five-step program to test Flint water and determine whether lead levels are dissipating as new corrosion controls coat underground pipes damaged after the city began using Flint River water in April 2014.

Snyder has not provided a timeline for when Flint residents may again be able to drink unfiltered water from their taps, saying the decision will be based on rigorous scientific testing.

Snyder advisers Rich Baird and Harvey Hollins discussed the local water testing opportunities Friday in a meeting of the Flint Water Interagency Coordinating Committee, saying they were also working with local churches to recruit qualified workers, who will be paid.

Residents interested in joining the water testing team can [sign up for more information](#) at the Orchards Children's Services website.

"The solution to this situation should involve the people of Flint and that is why we are partnering with the state to strengthen our community for the future," said Michael Williams, president of the nonprofit agency, in a statement.

As of Feb. 3, water tests from 414 Flint homes showed lead levels above the federal action standard of 15 parts per billion, according to Department of Environmental Quality Director Keith Creagh. Of the 6,276 samples collected, 5,320 showed lead levels below 5 parts per billion.

"You can say the trends are encouraging. I still say they're numbers," Creagh said Friday at the coordinating committee meeting, sounding both optimistic and cautious.

The state offers free in-home water tests to Flint residents. Primary care doctors in Flint and the Genesee County Health Department offer lead testing of children's blood.

Federal and state health officials also held a press conference Thursday afternoon in Flint to detail follow-up water studies conducted some of the 26 homes where lead levels in unfiltered water exceeded the 150 parts per billion rated capacity of water filters. Water with lead levels exceeding 15 parts per billion is deemed unsafe for human consumption.

The U.S. Environmental Agency retested filtered and unfiltered water in eight of the 26 homes last week and found just one home had lead exceeding 2 parts per billion when a faucet filter was properly used, said Mark Durno, a Flint coordinator for the EPA.

Federal officials had been alarmed the previous week by water samples of unfiltered water from the Michigan Department of Environmental Quality that suggested Flint's lead contamination in parts of the city was stronger than residential faucet filters can handle.

Durno said that EPA workers first sample filtered water, then remove the faucet filter to get an unfiltered sample and then change the filter's cartridge to get another sample to compare to the first.

Citywide testing of random homes in Flint will continue for the foreseeable future to monitor whether filters are working properly, Durno said.

Michigan marriage rate on the rise

WLNS - February 8, 2016

LANSING, MI. (WLNS) – The number of marriages in Michigan is on the rise.

The Michigan Department of Health and Human Services data shows 57,071 Michigan couples said “I do” in 2014 — the highest number of marriages in the state in 2006.

Marriages in counties more locally are also on the rise.

Jackson County processed 1,039 marriage license affidavits in 2015, which is higher than the 946 affidavits processed the year before.

And marriage license applications in Ingham County increased from 1,795 in 2013 to 1,940 in 2015.

Marriage rates have typically trended downward since the 1970s.

But Ingham County Clerk Barb Byrum says this trend hasn't been so prevalent in Ingham County recently.

She says it's because of last year's Supreme Court decision to make same-sex marriage legal.

“Over the years, we've seen an increase in marriage licenses applied for,” Byrum said. “And of course most recently, now that all loving couples may marry, we're seeing an increase in all of those families that have waiting so long to finally join together in marriage.”

Byrum says she expects to see the marriage rates in Ingham County go up even more over the next few years.

Attorneys challenge judge's takeover of Flint suit

The Detroit News – February 9, 2016, By Jim Lynch

The Michigan Court of Claims' chief judge is inserting himself into a class-action lawsuit against the state involving Flint's contaminated water, triggering a challenge by attorneys representing Flint residents.

On Jan. 21, a group of residents sued Gov. Rick Snyder, Michigan's Department of Environmental Quality, the state Department of Health and Human Services and two former Flint emergency managers over damages incurred from drinking the city's lead-tainted water.

The case was filed with the Court of Claims, which handles citizen lawsuits against the state with potential values over \$1,000, and assigned to Judge Mark Boonstra through the blind draw process. But Court of Claims Chief Judge Michael J.

Talbot stepped in and assigned the case to himself, an uncommon move the Flint families' attorneys have challenged as having at least "the appearance of impropriety."

Plaintiffs attorney Michael Pitt said the blind draw should have been followed because it ensures the appearance of judicial fairness in reviewing court cases.

"Allowing judges to bypass the blind draw, especially in high-profile cases like the Flint water crisis, erodes the public's confidence in the court's impartiality," Pitt said in an email. "The spotlight is on the court in cases like this. There is no better time for the court to scrupulously follow its own judge selection rules so that the public can be ensured that everyone involved in this case will get a fair shake."

Talbot could not be reached for comment. But Jerome Zimmer Jr., chief clerk for Michigan's Court of Appeals, said there was nothing controversial about Talbot taking on the case of the Flint residents.

"To me, that was not a reassignment," Zimmer said. "We used Local Order 2015-2 for management purposes with regard to that case. Beyond that, I don't have any comment."

Local Administrative Order 2015-2 was enacted less than two months ago and allows the Court of Claims to bypass the blind-draw process in four scenarios. One of them lets the chief judge "address assignment of cases involving special issues or circumstances to promote efficiency in case management. This includes, but is not limited to, directing the clerk to assign multiple cases involving the same or similar parties, or the same or similar claims, to one or more judges."

The other three scenarios that allow bypassing the blind draw are:

- If multiple actions are based on the same issue, the same judge will hear all of the cases.
- If a previously dismissed action comes back before the court, the original judge will hear it.
- If there are issues with "the frequency of random-draw assignments to the Chief Judge."

None of those situations applies to the Flint case, lawyers for the Flint plaintiffs argued in the motion filed this month.

"This action — the only case filed in this forum arising from the transactions or occurrences set forth in the complaint — is not affected by any of the exceptions listed...", wrote the plaintiffs' attorneys. "Plaintiffs assert that this reassignment violated both the spirit and letter of the law and creates an improper appearance of bias that should be immediately corrected."

In a new filing, the plaintiffs' attorneys requested the court resubmit the assignment of the case through blind draw because Talbot's move "violated both the spirit and letter of the law (and) creates an improper appearance of bias that should be immediately corrected ..."

Michigan's Court of Claims has a controversial history. In late 2013, the Republican-controlled Legislature moved it out from under Ingham County's liberal circuit court and placed it under the Michigan Court of Appeals, which is overseen by the GOP-dominated Michigan Supreme Court.

When Snyder signed the legislation in November 2013, he argued that the reforms would allow statewide representation of judges in hearing cases against local and state government compared with the 3 percent of Michigan's population represented by Ingham County judges.

The Supreme Court named Talbot chief of the state Court of Appeals in November 2013. He previously served as a Wayne County Circuit judge and was appointed to the state Court of Appeals in 1988 by Republican Gov. John Engler.

Two other appeals court judges assigned to the Court of Claims were appointed by Democratic Gov. Jennifer Granholm and the other appeals court judge was selected by Engler.

In December 2014, Talbot delivered an unexpected victory to Snyder's administration when he ruled Michigan did not have to refund more than \$1 billion in tax breaks to out-of-state companies. A Michigan Chamber of Commerce official described the decision as "utterly disappointing and stunning."

In the Flint case, should Talbot reject the motion or opt to toss the lawsuit, residents could take their objection to Michigan's Court of Appeals, where Talbot is also the chief judge.

"The fact that the Chief of the Court of Claims ... is also the Chief of the Court of Appeals ... exacerbates the appearance of lack of neutrality in the judicial handling of this matter involving serious allegations against the highest state officials," the residents' attorneys argue in court filings.

But Michigan's code of judicial conduct allows judges to disqualify themselves or have other parties raise the issue in an appeal to the broader state Court of Appeals.

"There is no specific court rule governing this situation, but invariably Court of Appeals judges disqualify themselves from any cases they were involved with at the trial level," said John Nevin, a spokesman for the Michigan Supreme Court.

"The Court of Claims is no different. ... Among the specific grounds upon which disqualification can be based is when the judge has personal knowledge of disputed facts."

The EPA deserves credit for reducing lead exposure

The Washington Post – February 8, 2016

Regarding the Feb. 7 front-page article "Many in Flint wish to leave but can't":

The situation in Flint, Mich., is unconscionable. It would not have happened if the city had followed the Environmental Protection Agency's Lead and Copper Rule and used standard practices when changing water supplies, and if Michigan had carried followed the Safe Drinking Water Act.

The EPA has taken some flak for its regional office's inaction. But the EPA should get credit for the major nationwide reduction in lead exposure when it eliminated leaded gasoline, the dominant source of lead exposure, years ago. The average lead blood level for children was 15 micrograms per deciliter in 1976.

A recent report from the Michigan Department of Health and Human Services indicated that 3.4 percent of the child blood measurements in Flint were greater than 5 micrograms per deciliter, and 0.6 percent were greater than 10 micrograms per deciliter. The Centers for Disease Control and Prevention calculates that fewer than 2.5 percent of U.S. children between ages 1 and 5 exceed 5 micrograms, its reference level. It recommends medical treatment at 45 micrograms per deciliter.

The major remaining cause of high blood lead levels is exposure to lead paint. The EPA deserves credit for drastic reductions in lead exposure.

Joseph A. Cotruvo, Washington

The writer was director of the Environmental Protection Agency's drinking water standards division from 1976 to 1990.

Hello Mikelle,

Susan is following up with our DTMB team to see how we can assist with running queries related to the MDHHS FOIA requests. Also, Kurt Krause has asked Susan and I to join a meeting on Wednesday with the Governor's office and other agencies involved with Flint FOIA response. Susan will update you Thursday morning related to services we can provide.

Hello Mikelle

Susan is taking a lead to coordinate this type of request related to Flint. I will talk with Susan in the morning and ask her to follow up with you and Kim on how DTMB can assist.

Thanks
Linda

To: Susan Moran <morans@michigan.gov>
Subject: strategy to consider re: FOIA requests I was complaining about all of the work related to collecting e-mails and documents for FOIA requests. My husband who works in IT suggested that it is possible for us to ask someone from

DTMB to set up a data base tailored to the parameters/criteria provided in the FOIAs and subpoenas (query the e-mail server by key words and dates). He said that someone would then need to sort out what is collected to make sure it fits the requests, but it would free up staff time to do the actual searches.

Bill said we would want a senior IT person who could hit the ground running without a lot of hand holding. If we pursue this he said that they should document each query they've run. The person would also need to correlate the results in a format that can be reviewed by others.

I could run it by Linda Pung to see if this is a possibility within our tight timelines. One more thing we'll need to pay for but it might provide some relief to overwhelmed staff. Thoughts?

Soliciting kids on government time? Worker faces judge

MLive – February 9, 2016, By John S. Hausman

According to Muskegon County court records, the charges stem from text messages he's alleged to have exchanged with another Muskegon County employee, Christine Marie Workman.

Workman, 38, of Norton Shores was also charged with contributing to the delinquency or neglect of minors. She was arraigned Monday, Feb. 8, on that misdemeanor charge,

A court order Jan. 22 removed Workman from her home and placed her children in the custody of their father under the supervision of the Michigan Department of Health and Human Services, according to court records. That neglect and abuse case was being scheduled for trial after a hearing before a Juvenile Court referee Tuesday morning.

According to the charges against Hibbard that Closz read aloud in court, his alleged crimes were committed on or about Jan. 19 at 990 Terrace, the address of the Muskegon County building, where Hibbard works for the Facilities Management Department.

The county suspended both employees Jan. 22 without pay after the allegations came to light. County Administrator Mark Eisenbarth has said an internal investigation is under way to determine whether they behaved improperly while at work.

Closz continued Hibbard's \$10,000 cash or surety bond that was set by the magistrate who signed Hibbard's arrest warrant last week. Hibbard posted the bond and remains free.

The judge scheduled Hibbard's probable-cause hearing for Feb. 29.

Hibbard has also been charged in Kent County with possession of child pornography and using a computer to commit a crime, both felonies, after Michigan State Police investigators searched his home computer.

Investigators for Child Protective Services and the Michigan State Police found text messages from Hibbard to Workman in which Hibbard allegedly expressed a wish to see sexually explicit photos of two young girls, according to the neglect and abuse petition against Workman.

Workman allegedly expressed willingness to send such images, but no evidence has been found that she actually sent any. She also allegedly engaged in sexual banter with Hibbard regarding the children in text messages, according to the petition.

Workman's attorney, Matthew Kacel, in an interview Friday, Feb. 5, defended his client.

"I believe that she's a good mother who's always taken care of her children and did nothing to put her children in actual danger at all," Kacel said. "She's cooperated fully. I think the charges are a bit of a stretch."

Asked if Workman was cooperating with authorities against Hibbard, Kacel said, "She's appalled at what they've allegedly found at his place."

He said Workman's cell phone allegedly used in the text exchanges is her own, not a county-issued phone.

Workman works for the county's Equalization Department. She formerly worked for Family Division of Muskegon County 14th Circuit Court, so two judges excused themselves from overseeing her neglect and abuse case. That case has been assigned to Circuit Judge Annette Rose Smedley.

Hibbard resigned Sept. 14 from the Sparta Village Council after serving seven years, abruptly walking out of a long council meeting during a recess and saying "I resign." He later said he didn't mean to resign and wanted to be reappointed.

School-aged child from Oakland Co. dies from influenza

FOX 2 Detroit – February 9, 2016

(WJBK) - A school-aged child from Oakland County has died due to influenza, the Michigan Department of Health and Human Services confirms. This is the first flu death in Michigan.

You can read more about the kindergarten student and the foundation his family has started in his honor here.

"My heart goes out to the family," said Oakland County Executive L. Brooks Patterson. "This tragedy reminds us that influenza can be a very serious illness, especially in young children."

The Oakland County Health Department recommends everyone over the age of 6 months receive an influenza vaccination. Those who are at a higher risk of flu complications—children younger than 5 years old, pregnant women, older adults, and those with chronic medical conditions—should especially get a flu shot and take preventative actions.

Appeals pending on 11 psych hospital employees fired for abusing patient

MLive – February 9, 2016, By Rosemary Parker

KALAMAZOO, MI-- Their former union president has gotten his job back, with lost pay. Now other Kalamazoo Psychiatric Hospital employees fired last year after being accused of abusing a patient may get their jobs back, too.

George Hite is scheduled to return to work later this month, after upgrading his training with new techniques for handling violent patients.

There are still 11 appeals waiting to be heard, Rick Hamm, temporary assistant FOIA coordinator for the state of Michigan, said in response to a Freedom of Information Request filed by the Kalamazoo Gazette/MLive.

Another worker has already returned to work effective Jan. 4, 2016, Hamm said.

White appealed that he was wrongfully discharged by the state more than a year ago from his work as a residential care aide at the Kalamazoo Psychiatric Hospital, one of five state-owned facilities for mental patients.

White's dismissal was modified to a 20-day suspension, Jennifer Eisner, public information officer for the Michigan Department of Health and Human Services said last week.

A residential care aide at the hospital and president of AFSCME 652, the labor union representing aides at KPH, White was fired over the treatment of a 30-year-old KPH patient.

White and others who also lost their jobs over their treatment of that patient argued that they were following a doctor's orders that they restrain the 30-year-old male patient at the first signs he was becoming aggressive, orders that were not changed until after the patient suffered a broken arm. After that incident, the patient was moved to a different hospital.

"I knew that what we were doing wasn't a good idea, and that once an injury occurred they would try to cover their behinds," White said at the time of his dismissal.

White's pay and benefits will be restored, he said.

Flint water crisis -State's top medical officer not serving full time as required by law
City Pulse – February 9, 2016, Todd Heywood

TUESDAY, Feb. 9 — The state official overseeing the medical response to the Flint water crisis appears to be violating state law by only working part time.

Dr. Eden Wells is the state's chief medical executive officer, which under the state's Public Health Code is supposed to be full time when the head of the state Health and Human Services Department is not a physician. That has been the case since Gov. Rick Snyder appointed Nick Lyons as department director in April 2015.

Yet Wells splits her time evenly between the state job and the University of Michigan, U of M spokesman Rick Fitzgerald confirmed.

An April 30 press release issued by U of M when Wells was appointed to the state post said she will continue there as a professor of applied epidemiology and as the director of the school's Preventive Medicine Residency Program.

"Either she needs to resign or become a full-time employee of the state of Michigan," said House Democratic Leader Tim Greimel, D-Auburn Hills. "With the Flint water crisis, the Legionnaire's Disease, the Detroit Public Schools with classrooms filled with mold and mushrooms, we have very many pressing health concerns in the state. We need some one who is focused on it full time."

But that is not what Wells is being paid for, according to the University of Michigan.

"She's basically splitting her time — 50 percent with university responsibility and 50 percent with the state of Michigan," said Fitzgerald, director of the U of M Office of Public Affairs and Internal Communications. "The state contracts with the university to fill this role."

Questioned if he was stating that Wells was employed only part time as the state's chief executive medical officer, Fitzgerald said, "That's correct."

That is a violation of the law, say experts.

They point to the Public Health Code provisions on hiring a chief executive medical officer, which reads in part: "The chief medical executive shall be a full-time employee."

"If accurate, this means that Dr. Wells is working as a part-time independent contractor in violation of the Public Health Code," said Christine A. Yared, an attorney in Grand Rapids with experience litigating some aspects of the public health code.

Dave Murray a spokesman for Republican Gov. Rick Snyder, dodged direct questions related to the legality of the arrangement, instead issuing a statement saying Wells "has been putting in full time hours," and "more so during this time of crisis."

"Her expertise is needed as we move forward evaluating the health risks faced by city residents and determining ways to address these challenges," he continued. "People in Michigan benefit from her continued connections to the University of Michigan, which keep her abreast of developments in the field and access to additional experts that can help the state as we address the Flint water crisis."

Jennifer Eisner, spokeswoman for the Health and Human Services Department, said in a statement Tuesday that Wells' past experience with the department "benefits" the residents of Michigan.

"Regardless of the source of pay, Dr. Wells is available to the department full time for the emergency response in Flint," Eisner wrote.

She declined to comment on the legality of the contractual arrangement with U of M and the state.

Wells was not available for an interview Tuesday afternoon because she was working in Flint, Eisner and Fitzgerald both said.

"Without commenting on Dr. Wells' medical expertise or ability to hold this position, these allegations are troubling, particularly if they were done as a cost-savings measure for the state by the Snyder administration," said Lonnie Scott, executive director of Progress Michigan, a liberal advocacy group based in Lansing. "Given the current public health crisis, it's now more important than ever that Michigan reprioritize its commitment to ensuring we have healthy communities regardless of the cost."

Yared, the attorney, as well as Greimel raised concerns about transparency.

"There are also significant liability and legal problems, including the legal difference between an employee and an independent contractor, the role of the University in potential litigation and the question of who makes legal decisions about her documents and emails," Yared said.

Obtaining documents related to the Flint water crisis has been a significant concern — with the governor refusing to release the emails of his top aides, which are not subject to the state's open records law.

Part-time health - State's medical chief holds post in violation of health code

City Pulse – February 10, 2016, By Todd Heywood

The state's top official overseeing the medical response to the Flint water crisis is violating state law by only serving in a part-time capacity.

Because the current director of the Health and Human Services Department, Nick Lyons, is not a doctor, Michigan's Public Health Code requires that the department appoint a "full-time" physician as the state's chief medical officer. But Dr. Eden Wells is a half-time appointment.

She is a full-time employee at the University of Michigan, which contracted with the state for her to work half time as Michigan's chief medical officer. The other half of Wells' U of M responsibilities include teaching epidemiology and directing the U of M Medical School of Preventative Medicine Residency Program.

Both she and Lyons were appointed in April.

With the state facing unprecedented public health issues — the Flint water crisis and lead poisoning of children there, a Legionnaire's Disease outbreak that's killed at least nine people, students in the Detroit Public Schools' students attending classes in mushroom and mold-infested classrooms — critics believe a full-time position is needed. Moreover, the arrangement with the university, which may have been a cost-saving measure, raises issues about transparency in state government.

"Either she needs to resign or become a full-time employee of the state of Michigan," said House Democratic Leader Tim Greimel, D-Auburn Hills. "We have very many pressing health concerns in the state. We need someone who is focused on it full time."

Detailing Wells' responsibilities, Rick Fitzgerald, director of the U of M Office of Public Affairs and Internal Communications said, ""She's basically splitting her time — 50 percent with university responsibility and 50 percent with the state of Michigan." He confirmed that the state contracts with the university to fill this role.

Wells is board-certified in both internal medicine and preventive medicine. According to her profile on U of M's website, her current activities involve "curriculum development, teaching, and applied public health practice training within the preventive medicine program; current research and practice activities include work in disaster epidemiology, and development and evaluation of surveillance for emerging infectious disease threats." She worked previously for the state's health department as a medical consultant and medical epidemiologist from 2004-2011.

U of M and state officials, despite several requests, have not provided the contract between the state and university, nor have they disclosed the total value of the contract or Wells annual salary.

Why the state has failed to appoint a full-time chief medical executive officer is unclear.

"If accurate, this means that Dr. Wells is working as a part-time independent contractor in violation of the Public Health Code," said Christine A. Yared, an attorney in Grand Rapids with experience litigating some aspects of the public health code.

Dave Murray, press secretary for Republican Gov. Rick Snyder, dodged direct questions related to the legality of the arrangement, instead issuing a statement saying Wells "has been putting in full time hours," and "more so during this time of crisis."

"Her expertise is needed as we move forward evaluating the health risks faced by city residents and determining ways to address these challenges," he continued. "People in Michigan benefit from her continued connections to the University of Michigan, which keep her abreast of developments in the field and access to additional experts that can help the state as we address the Flint water crisis."

Health and Human Services spokeswoman Jennifer Eisner said in a statement Tuesday that Wells' past experience with the department "benefits" the residents of Michigan. "Regardless of the source of pay, Dr. Wells is available to the department full time for the emergency response in Flint," Eisner wrote.

She declined to comment on the legality of the contractual arrangement with U of M and the state.

Wells was not available for an interview Tuesday afternoon. Eisner and U of M's Fitzgerald said she was in Flint working on the crisis there.

"Without commenting on Dr. Wells' medical expertise or ability to hold this position, these allegations are troubling, particularly if they were done as a costsavings measure for the state by the Snyder administration," said Lonnie Scott, executive director of Progress Michigan, a liberal advocacy group based in Lansing. "Given the current public health crisis, it's now more important than ever that Michigan reprioritize its commitment to ensuring we have healthy communities regardless of the cost."

Yared, the attorney, as well as Greimel raised concerns about transparency.

"There are also significant liability and legal problems, including the legal difference between an employee and an independent contractor, the role of the university in potential litigation and the question of who makes legal decisions about her documents and emails," Yared said.

Obtaining documents related to the Flint water crisis has been a significant concern — with the governor refusing to release the emails of his top aides, which are not subject to the state's open records law.

Wells has been the medical face of the response to the dual public health crisis unfolding in Flint due to decisions to not properly treat Flint River water as a source of drinking water for the city. There has been an alarming spike in lead in the water, and that in turn has shown up in a number of Flint-area children and at least two dogs. Lead is a long-term neurotoxin linked to behavioral and developmental issues in children.

On top of that, health authorities in the county believed an outbreak of Legionnaire's Disease — a pneumonia — may have been linked to the water shift. Over two years, and what health authorities including Wells called "two waves" of outbreaks, at least 87 people were diagnosed with the disease and at least nine died between March 2014 and June 2015.

Signs of trouble at MDEQ, years before Flint water crisis

MLive – February 10, 2016, By Ted Roelofs, Bridge Magazine

Years before a lead-poisoning crisis made Flint an unenviable center of national attention, there were warning signs about the state agency charged with keeping drinking water safe.

Among them: federal government concerns about the ability of the Michigan Department of Environmental Quality to detect lead in the water supply.

In 2010, a federal audit portrayed MDEQ as a department beset by budget cuts, staff shifts and limited resources, and willing to take regulatory shortcuts in safeguarding Michigan's water.

The agency's Drinking Water Program had just seen its annual budget slashed to roughly \$1.5 million, down \$300,000 from the previous fiscal year, said the audit, conducted by the U.S. Environmental Protection Agency.

"Frequent hiring freezes have impacted Michigan for about ten years," the report noted. "This has made it difficult to replace positions." Bans on contract services and a "cumbersome" employee hiring process didn't help, either.

Funding cuts forced MDEQ's Drinking Water Program to fill vacancies "with staff from other programs that have been cut or eliminated," the audit said. "While this practice preserves jobs, it decreases the technical knowledge of staff and requires tremendous resources to train these staff."

Almost as an aside, the audit suggests that "(t)raining for new staff would also be appreciated on fundamental public health issues and compliance decisions."

It is not immediately clear whether the financial and monitoring shortcomings identified in the 2010 audit were factors in MDEQ's much-criticized performance during the Flint water crisis, or to what degree they may have been addressed in the years since.

Melanie Brown, MDEQ's communication director, did not respond to several requests for comment from Bridge about the report.

Technical shortcomings

The EPA audit documented technical shortcomings in everything from the monitoring of radioactive pollutants known as radionuclides and coliform bacteria in water to – notably – how effectively MDEQ followed federal regulations for tracking lead levels.

Lead in water is measured in parts per billion (ppb). Federal regulations require water utilities to certify that 90 percent of homes in a community contain 15 parts-per-billion of lead or less in drinking water. It's a standard some critics say should be toughened, for two reasons: One, even at levels below 15 ppb, lead can pose serious health concerns, especially for young children. Second, the 90th percentile standard theoretically could allow cities to proclaim their water safe even if 10 percent of homes had lead levels higher than the 15 ppb EPA "action" standard.

The EPA audit said that MDEQ failed to meet this federal standard, noting that it "does not calculate 90th percentiles, unless one sample exceeds one-half of the [15 ppb] action level. In that case, a potential violation will be identified and staff will use [a state database] to calculate the 90th percentile."

MDEQ's "practice does not meet the requirements of Federal Regulations, since it is required that all 90th percentiles be calculated," the audit concluded.

The audit also found MDEQ failed to submit 90th-percentile results to a federal water information system "in a timely fashion."

In "several cases," MDEQ also failed to make a timely report of lead readings that exceeded the federal action standards.

EPA was likewise troubled that MDEQ did not conduct the required number of water samples for lead, including during the summer months to conserve limited agency resources.

In the case of radionuclides – radioactive substances that can be found in certain rocks and minerals and sometimes enter water supplies – the audit found there were "no labs in Michigan that are certified for radionuclide analysis, so samples are sent out of state. The labs tend to be very slow and yield widely varying results."

Elsewhere in the audit, EPA noted that the state agency did not monitor whether water quality tests were being performed in schools or childcare centers. The agency left that task to local health departments, but had "no formalized oversight or enforcement to ensure" those reports were turned in, nor any "specific programs to address drinking water contamination in schools or childcare facilities."

A broken system

One expert from the Virginia Tech scientific team that helped bring the Flint water crisis to public attention said she was not surprised by the audit findings.

Yanna Lambrinidou, a medical ethnographer and adjunct assistant professor in the Science and Technology Studies program at Virginia Tech, said deficiencies are common in water supply regulatory bodies across the nation.

"These are programs that are understaffed, underfunded and lacking knowledge and experience," Lambrinidou told Bridge.

She noted that in 2013, the Association of State Drinking Water Administrators found that 17 states had cut budgets for agencies regulating drinking water safety by more than a fifth, and more than two dozen had cut spending on full-time employees.

So it was in Michigan. The EPA audit, conducted during the administration of Gov. Jennifer Granholm, refers to "dramatic budget cuts" at MDEQ that had a "significant impact" on its water program.

"Increased regulatory requirements coupled with a decrease in available funding, have required MDEQ to prioritize program activities" and sharpen its focus on "drinking water regulations that directly affect public health," the audit said.

Lambrinidou, who conducted research on lead contamination in drinking water in Washington D.C., exposed in a series of Washington Post articles in 2004, is scheduled to testify today in a U.S. House hearing on the Flint water crisis. She also served on a working group for the National Drinking Water Advisory Council that issued recommendations for changing how lead and copper are regulated in drinking water.

Lambrinidou said the audit's finding that MDEQ was not following the letter of the 90th-percentile reporting requirement was troubling. "That is in violation. It says to me that they are not following the law. It says to me the system is more broken than we think."

There's no indication the alleged failings in this audit led directly to the Flint water crisis. But the EPA's findings appear to foreshadow much of what was to come – the failure of state regulators to quickly identify and mitigate the threat of lead poisoning in Flint's drinking water after the city began to draw its water in 2014 from the highly corrosive Flint River.

The audit's warnings add to an already troubling picture of an agency that was one of several government departments at the local, state and federal level that, according to currently available records, failed to prevent lead poisoning of Flint residents.

On Dec. 29, the Flint Water Advisory Task Force, the team appointed by Gov. Rick Snyder to investigate the Flint debacle, concluded that "primary responsibility for what happened in Flint rests with the Michigan Department of Environmental Quality."

The task force echoed some themes in the EPA audit – notably, it's description of MDEQ as an agency where "a culture exists in which 'technical compliance' is considered sufficient to ensure safe drinking water in Michigan.

"This minimalist approach to regulatory and oversight responsibility is unacceptable and simply insufficient to the task of public protection. It led to MDEQ's failure to recognize a number of indications that switching the water source in Flint would – and did – compromise both water safety and water quality."

This "minimalist" approach remained a topic of conversation among MDEQ and EPA regulators last summer. In July emails, an EPA official cited a conversation with MDEQ regulators about "the possibility of the Michigan State Legislature looking to have just a minimal drinking water program" in the future.

A breakdown at multiple levels

By now, the timeline of what happened is familiar.

Flint, under a series of Gov. Rick Snyder-appointed emergency managers, cut ties with the Detroit water system as a money-saving measure and in April 2014 began to draw water from the Flint River. Within weeks, residents were complaining about the water's taste and appearance, in some cases a rusty color that could be an indication that iron along with lead were leaching from pipes into the drinking water due to the river water's corrosive properties.

As Bridge recently chronicled in an exhaustive timeline of the Flint crisis, an EPA employee by the name of Miquel Del Toral raised concerns with MDEQ and others about lead water levels in Flint as far back as last February. Those concerns were not acted on for many months by MDEQ, the Michigan Department of Health and Human Services, Flint water officials, Snyder's office, or by Del Toral's higher-ups at EPA.

Last April, two months after telling EPA that Flint had optimized corrosion control in place, MDEQ acknowledged Flint's drinking water had no corrosion control.

The same month, Del Toral issued a memo to MDEQ stating his concern that its practice of flushing out water lines before testing for lead was skewing results downward: "I wanted to follow up on this because Flint has essentially not been using any corrosion control treatment since April 30, 2014, and they have (lead service lines). Given the very high lead levels found at one home and the pre-flushing happening in Flint, I'm worried that the whole town may have much higher lead levels than the compliance results indicated..."

Again, the conclusion of the Flint Water Advisory Task Force: "MDEQ staff instructed the City of Flint water treatment staff that corrosion control treatment was not necessary until two six-month monitoring periods had been conducted... The decision not to require corrosion control treatment, made at the direction of the MDEQ, led directly to the contamination of the Flint water system."

In August, Virginia University professor and municipal water expert Marc Edwards began independent testing of Flint's water. In September, he published results that included several samples exceeding 100 ppb and one exceeding 1,000 ppb. An earlier test found lead levels exceeding 13,000 ppb in one home.

"FLINT HAS A VERY SERIOUS LEAD IN WATER PROBLEM," he wrote emphatically in his report.

In September, a Flint physician, Dr. Mona Hanna-Attisha, and Hurley Medical Center released a study that found the percentage of Flint children and infants with above-average lead blood levels had nearly tripled among those in high-risk areas of the city.

Finally, in early October, the Snyder Administration began to take action, announcing it would provide water filters to residents, test the water in Flint schools to assure it was safe and expand testing of individual homes. The city

reconnected to the Detroit water system that same month and initiated corrosion control measures. Even so, safety questions remain, and it is unclear how soon Flint residents will be cleared to drink the water coming to their homes.

MDEQ's director, Wyant, and the agency's spokesman, Brad Wurfel, who had aggressively derided questions about the water's safety, later resigned. On Feb. 5, MDEQ's Liane Shekter Smith was fired.

Meanwhile, EPA is conducting a "full programmatic review" of MDEQ beyond its typical annual inspection to assure the agency "maintains reliable drinking water supplies that meet all of the requirements of the Safe Drinking Water Act."

The audit is expected to take several months to complete.

Lambrinidou of Virginia Tech said the EPA audit back in 2010 should have raised alarm at both EPA and MDEQ.

"What this says to me is that this report came out six years ago and six years later people in Flint have gotten poisoned water," Lambrinidou said. "What has happened in those six years? Who fixed what?"

State defends Legionnaires' response in Flint crisis

Detroit Free Press – February 9, 2016, By John Wisely and Elisha Anderson

State health officials today defended their response to the Legionnaires' disease outbreak in Flint, discounting concerns that infighting hurt public health.

"We rely on strong relationships with our partners at the local level including primary care providers, community organizations, health plans, and most importantly our local health departments," Nick Lyon, director of the Michigan Department of Health and Human Services, said in a statement.

The response came after the Free Press reported harsh criticisms of the state from the Genesee County Health Department, which was investigating an outbreak of the bacteria that killed nine people in 2014 and 2015.

Genesee County on Monday released e-mails in which county health officials blasted the Michigan Department of Environmental Quality and the Department of Health and Human Services, voicing concerns about delays, incompetence and possible cover-ups of the outbreak.

The outbreak began in 2014 after Flint switched its drinking water source to the Flint River after using Detroit's water system for decades. The decision to switch was made when Flint was run by a series of emergency managers appointed by Gov. Rick Snyder.

Flint officials and others have questioned what Snyder knew and when he knew it. Snyder announced the outbreak last month, saying he'd just learned of it. On Friday, Harvey Hollins III, who runs the governor's office of Urban and Metropolitan Initiatives, told the Free Press that he learned of the Legionnaires' problem in March 2015 but didn't alert Snyder because there wasn't enough information on it.

DETROIT FREE PRESS

Flint e-mails: CDC voiced concerns over Legionnaires' actions

E-mails show state and county officials investigated it for more than a year before Snyder's remarks.

To show state health officials took the outbreak seriously, Lyon released e-mails from his own department showing state health officials working on it in October 2014, though one of those raised questions about the governor's time line.

Susan Bohm, a disease specialist in the DHHS, wrote in an Oct. 17, 2014, e-mail that she's spoken with the state's top drinking water officials, Liane Shekter Smith, about the outbreak.

"What she did share with me was interesting — that there have been numerous complaints about the Flint water, that the governor's office had been involved, and that any announcement by public health about the quality of the water would certainly inflame the situation," Bohm wrote.

Snyder spokesman Dave Murray said the governor's office didn't know about the Legionnaires' outbreak until March 2015.

"The departments were working with the Genesee County Health Department regarding Legionnaires' outbreaks in Genesee County and other places," Murray said in an e-mail. "But no one, at any level, brought to the governor that there were potential concerns about Legionnaires' Disease and any connection to the Flint River until January of this year."

Snyder last week announced the firing of Shekter Smith, who could not be reached for comment. An e-mail to Bohm seeking clarification was answered by a department spokeswoman, Jennifer Eisner.

"I've followed up with her and can confirm that the numerous complaints comment in Susan's e-mail referred to the smell, taste, and look of the Flint water and not Legionnaires," Eisner wrote to the Free Press today.

State email trail tracks Legionnaires' outbreak in Flint

WLNS – February 9, 2016

LANSING, Mich (WLNS) – The Michigan Department of Health and Human Services has released 53 pages of emails detailing a history of emails concerning the tainted water in Genesee County and the threat of Legionnaires Disease.

The emails reveal that in October 2014 the MDHHS was aware of an increase in the number of Legionnaires' disease cases being seen in Genesee County.

Within a week there were concerns raised about the water in Flint due to the location of the Legionnaires' cases.

In the emails there are indications that the Genesee County Health Department officials were reaching out directly to the CDC, leapfrogging the state agencies.

In February 2015 an email from Shannon Johnson of the Michigan Department of Community Health reveals frustrations after seven months of trying to get Genesee County to work with the state agencies instead of the CDC.

Later that month a survey was begun, in some cases reaching back to interview Legionnaires's Disease victims from June of 2014 who had never been contacted by Genesee County Health Department officials.

It was at the time that a notification was sent out to approximately 15 people at the three local hospitals that there was an increase in the number of Legionnaires' Disease cases in the area. It was not sent as a more wide-reaching Health Alert Network notification because the person who normally does the distribution for the county was not working that day.

Michigan child dies of influenza; Health officials urge flu shots

MLive – February 10, 2016, By Khalil AlHajal

PONTIAC, MI -- Health officials are urging flu shots for everyone over 6 months old after the death of a child in an influenza case was reported in Oakland County.

The Oakland County Health Division announced the death of the "school-age" child Tuesday evening.

"My heart goes out to the family," said Oakland County Executive L. Brooks Patterson. "This tragedy reminds us that influenza can be a very serious illness, especially in young children."

Officials said children under 5, pregnant women, older adults and people with chronic medical conditions "should especially get a flu shot and take preventative actions."

"I urge everyone who is able to get a flu shot to protect themselves and those around them," said George Miller, director of the Oakland County Department of Health and Human Services.

"You can help prevent the flu by washing your hands, covering your cough, and staying home when sick."

Information on getting the flu vaccine is available [here](#) for Oakland County, [here](#) for Wayne County and [here](#) for Macomb County.

USDA to Temporarily Allow WIC Funds to be Used for Lead Testing for Flint-Area WIC Recipients, Announces Other Measures to Expand Access to Healthy Foods

USDA – February 10, 2016

FLINT, Mich., Feb. 10, 2016 – As part of the U.S. Department of Agriculture's ongoing efforts to support residents in Flint, Mich., Dr. Kathryn Wilson, Deputy Under Secretary for Food, Nutrition, and Consumer Services today announced that USDA will temporarily allow Michigan to use WIC funds to conduct lead testing for WIC participants. An estimated 3,800 WIC participants could potentially be tested as a result of this action.

The announcement came as Wilson visited a WIC clinic and elementary school in Michigan to discuss how residents can access USDA programs to help mitigate the ill effects of the city's water crisis on their health and wellbeing. USDA is supporting the U.S. Department of Health and Human Services and the state and local governments in providing relief to those affected by the water contamination.

Wilson also announced two measures to expand access to healthy foods that could mitigate the impacts of lead on children. In the affected Flint area, at least 28 schools, serving over 144,000 students, are eligible to adopt a program known as the Community Eligibility Provision that ensures universal access to school meals for all children in the school. CEP is targeted at high-poverty schools and has proven successful in ensuring more kids benefit from nutritious school meals. USDA will work in collaboration with Michigan to help as many eligible schools as possible adopt this provision.

In addition, Wilson announced that USDA recently expanded eligibility for the Summer Electronic Benefits Transfer (EBT) for Children program to include areas experiencing extreme circumstances, such as Flint. Priority for expanding summer EBT was previously focused solely on rural areas. The program delivers EBT nutrition assistance benefits to families who have children eligible for free or reduced-price school meals. These benefits provide families with needed assistance in purchasing healthy foods for their children in the summer months when school meals are not served. Michigan must submit an initial application by Friday for Flint to participate in the program.

"The programs of the USDA's Food and Nutrition Service are there to help because they're a vital source of nutrition for children, infants, and adults," said Wilson. "Our goal is simple: to encourage folks to maximize the healthy foods they have available in order to mitigate the effects of lead. We're working in partnership with other federal agencies to make every possible resource available to help. We encourage people affected by this crisis to visit the local health department to find out what nutrition programs they may be eligible for that could help."

FNS has been working with state agencies in Michigan to address the lead crisis since September 2015. The agency has been working closely with the Michigan Department of Education (MDE) to address the effects of the crisis through the school meals programs, and with the Michigan Department of Health and Human Services (MDHHS) to provide assistance through the WIC program. Some of the most recent actions include:

- On January 25, FNS approved the state's request for \$62,700 in additional funding to expand the Fresh Fruit and Vegetable Program to more eligible schools, providing additional fresh fruits and vegetables at no cost to students. The additional funding, along with practical technical assistance on menu planning strategies, is designed to aid schools in identifying and incorporating more foods high in vitamin C, calcium, and iron that can help reduce lead levels in the body.
- Mothers of formula-fed infants participating in WIC have been given the option to receive ready-to-feed formula instead of the standard powdered formula. In addition, the 7,585 Flint residents participating in the WIC program (including 1,527 women, 1,792 infants, and 4,266 children) are being offered water filters, and other supportive services.
- FNS is also currently working with the state on a request for additional support through USDA Foods, to provide targeted items that could aid in mitigating the effects of lead absorption, via Disaster Household Distribution through The Emergency Food Assistance Program (TEFAP).
- Through its Child and Adult Care Food Program (CACFP), Supplemental Nutrition Assistance Program (SNAP) nutrition education, and its support for food banks, FNS is leveraging partnerships with community-based organizations and farmers markets to increase nutrition education efforts on how healthy food may help mitigate lead absorption.

For more information about USDA's support for those affected by the Flint lead crisis, please visit our Flint Fact Sheet.

USDA's Food and Nutrition Service administers 15 nutrition assistance programs that, together, comprise America's nutrition safety net. They include school lunch and breakfast, WIC, TEFAP, CNAP, CACFP, summer meals programs, and more. For more information, visit www.fns.usda.gov.

Subject: FOIA requests follow up

Hello Kurt

I would like to get someone on your team to join me to follow up with Mikelle on this request. Who should I include in a meeting with Mikelle? DTMB is discussing an automated search approach with the AGs office for approval.

I am getting information on the document Management solution recommended at the FOIA meeting yesterday.

Thank you
Linda

Hello Mikelle,

Susan is following up with our DTMB team to see how we can assist with running queries related to the MDHHS FOIA requests. Also, Kurt Krause has asked Susan and I to join a meeting on Wednesday with the Governor's office and other agencies involved with Flint FOIA response. Susan will update you Thursday morning related to services we can provide.

Feel free to contact me on my cell if we need to talk sooner. [517/930-2323](tel:5179302323).

Thanks,

Linda

Hello Mikelle

Susan is taking a lead to coordinate this type of request related to Flint. I will talk with Susan in the morning and ask her to follow up with you and Kim on how DTMB can assist.

Thanks

Linda

Subject: strategy to consider re: FOIA requests

I was complaining about all of the work related to collecting e-mails and documents for FOIA requests. My husband who works in IT suggested that it is possible for us to ask someone from DTMB to set up a data base tailored to the parameters/criteria provided in the FOIAs and subpoenas (query the e-mail server by key words and dates). He said that someone would then need to sort out what is collected to make sure it fits the requests, but it would free up staff time to do the actual searches.

Bill said we would want a senior IT person who could hit the ground running without a lot of hand holding. If we pursue this he said that they should document each query they've run. The person would also need to correlate the results in a format that can be reviewed by others.

I could run it by Linda Pung to see if this is a possibility within our tight timelines. One more thing we'll need to pay for but it might provide some relief to overwhelmed staff. Thoughts?

3 things state workers should watch in '17 budget

Lansing State Journal – February 10, 2016, By Justin A. Hinkley

LANSING – The biggest news out of [Gov. Rick Snyder's budget proposal](#) on Wednesday was nearly \$1 billion in requested new spending for the Flint water crisis, Detroit Public Schools and higher education.

But the governor's recommendation includes millions of dollars for projects affecting Michigan's [47,444 state workers, more than 14,000 of whom](#) live and work in Greater Lansing.

The Legislature will add to and take from the governor's budget before a final version is passed sometime this summer, but here's a look at some of the things Snyder wants for his employees.

1.) New hires

Snyder asked lawmakers for \$9.5 million to run an 85-graduate Michigan State Police trooper school and \$8.5 million to bring on 350 new corrections officers, building on force increases Snyder already has implemented. Enlisted troopers in the State Police have grown by 13% under Snyder's watch, and his [Michigan Department of Corrections met its goal](#) of hiring nearly 1,000 new corrections officers to bolster a painfully short-staffed prison police force.

LANSING STATE JOURNAL

Snyder cuts focused on unionized workers

Snyder pitched \$1.1 million for additional staffing at the Grand Rapids Home for Veterans in next year's budget to help it and the D.J. Jacobetti Home for Veterans earn federal [Centers for Medicare & Medicaid Services certification](#). He also asked for \$1.9 million in new spending for the current budget to hire more nursing staff and a Medicaid consultant at Jacobetti.

Though the recommendation makes no mention of new staff, Snyder sought \$7.6 million to open a currently unused wing at the state's Center for Forensic Psychiatry to treat 30 additional patients who have been deemed "not guilty by reason of insanity." Expect nurses to push for new hires, since they say they're already fatigued by excessive mandatory

overtime, putting patients at risk. A bill introduced last year would prohibit mandatory overtime for state nurses and nurses in the private sector.

LANSING STATE JOURNAL

State nurses say they work too much OT

Other new hires specifically mentioned in the governor's pocketbook pitch are seven new forest development staffers at the Department of Natural Resources and new Department of Agriculture & Rural Development laboratory employees "to facilitate timely export of Michigan agricultural products."

The state Civil Service Commission would get \$1.6 million more in the governor's budget for "professional, nonpartisan oversight of the state's workforce."

2.) Technology, equipment investments

Snyder asked for more than \$22 million to continue upgrading the state's child welfare software. Glitches in that system have frustrated the state's Children's Protective Services and foster care workers for nearly two years, though the state and employee unions announced this winter many of the problems had been fixed.

The state plans further upgrades to make that system work better with other systems throughout the Department of Health & Human Services.

Snyder sought \$7 million in new spending for the Department of Technology, Management & Budget's Information Technology Investment Fund to upgrade other government tech.

The governor also asked for \$2.2 million for the Michigan State Police's cyber crimes investigations and \$5 million for the DTMB's cybersecurity improvements on state systems. The State Police would investigate crimes statewide, but state government systems are hit by hundreds of thousands of cyberattacks a day. Those attacks can affect state employee's work stations, and state workers have been particularly concerned as the administration pushes for employees to use their own smartphones at work.

LANSING STATE JOURNAL

State struggles to woo Millennial techies

Finally, Snyder suggests \$6.5 million in upgrades for the Office of Retirement Systems software to "enhance customer service" for retired state workers, teachers and judges, plus \$1 million to upgrade video-conferencing technology that allows inmates to attend court hearings remotely. Transporting prisoners is one of the most dangerous times for corrections officers.

Snyder also wants to give some state workers new equipment, including a proposed \$981,300 for new ballistic vests for probation and parole agents and about \$1 million to replace more than 350 pieces of aging forest fire equipment.

3.) Facilities changes

Snyder would add \$6.5 million beginning Oct. 1 to support special maintenance projects at state offices and other facilities. He also would recommend \$7.5 million in spending to complete an office shuffle in downtown Lansing and Dimondale that would move some 2,000 state workers.

The shuffle would move more state workers out of rented space and into state-owned offices, bring employees of the former departments of Community Health and Human Services (now the single Department of Health & Human Services) closer together, and make room for the state Senate to move into the Capitol View building currently occupied by community health workers.

He also pitched \$10 million in savings by moving the Upper Peninsula's Kinross Correctional Facility a half-mile away to the former Hiawatha Correctional Facility site, and redistributing prisoners "to most efficiently utilize existing prison capacity."

In addition to the new staff at the Grand Rapids Home for Veterans, Snyder wants \$5 million to remodel the fourth floor

The governor wants to spend \$7.4 million at the state Capitol in downtown Lansing, which over the last couple years has undergone some of its most dramatic restorations since a major project in the 1990s.

Governor Snyder 2017 budget proposal

State officials urge residents to get flu vaccines

ABC 10 UP – February 10, 2016

LANSING — Tragic news from downstate is prompting health officials to remind citizens about the importance of vaccinations. The Michigan Department of Health and Human Services says the first influenza-associated pediatric death of this flu season was a school-aged child from southeastern Michigan.

Despite the mild flu season thus far, experts say that flu viruses — including the notorious H1N1 strain — are circulating. Even this late in the season, getting a flu shot can help prevent serious illness.

"It takes about two weeks for the vaccine to provide protection," said Dr. Terry Frankovich, the Local Public Health Medical Director at the Marquette County Health Department. "With flu season sometimes extending into April and even a little beyond, it's very reasonable to get vaccinated."

Getting vaccinated can even help prevent others from getting the disease.

"People who don't feel that they're particularly at risk, number one I'd submit that they may be wrong, and number two it does help to protect other members of the community, particularly young infants and people who are unable to be vaccinated for other reasons," Dr. Frankovich added.

During the previous flu season, only forty-four percent of Michigan residents were vaccinated against flu, putting Michigan in 40th place in the country. Click [here](#) to view the Health Map Vaccine Finder or [here](#) to find out more about the flu.

First Child's Death Caused by Flu Reported, Reminding How Serious the Flu Can Be

MI News 26 - February 10, 2016, By Jacob Owens

The Michigan Department of Health and Human Services is reporting the first child's death caused by the flu this season.

The reported death was of a school aged child in southeast Michigan. Although this flu season has been relatively mild so far, it's a reminder how serious the flu can be. The Dept of Health is urging residents to protect themselves and their families against the flu by getting the flu vaccine.

The vaccine is recommended for everyone over 6 months old, but it is especially important for those at increased risk for complications caused by the flu. Those people include children, adults over 65, anyone with underlying medical conditions, and pregnant women. Children under 6 months cannot receive the vaccine and instead those around the child should be vaccinated for the child's protection.

To find where you can get a flu vaccine near you, head to flushot.healthmap.org.

Snyder budget tackles urgencies: Flint water and DPS

Lansing State Journal – February 10, 2016, By Paul Egan and Kathleen Gray

LANSING — Michigan faces two unique challenges — the Flint public health crisis and the financial meltdown at Detroit Public Schools — that require immediate attention in the 2016-17 state budget, Gov. Rick Snyder said in a presentation to lawmakers Wednesday.

Snyder spoke at the Capitol as demonstrators chanted outside the House Appropriations Committee room, voicing their anger over the lead contamination of Flint's drinking water.

Included in Snyder's \$54.9-billion proposed state budget is \$195.4 million dedicated to Flint in 2017 and a proposal to take \$72 million a year for 10 years from the state's tobacco settlement fund to retire Detroit Public Schools debt that is expected to hit \$515 million this summer.

Last year, "we worked to develop a solution to address Michigan's crumbling roads and bridges," Snyder said in the text of his budget presentation. "Now we must solve the Flint water crisis and address the challenges at Detroit Public Schools."

The link is that the crises either developed or worsened while the city government or school district was under control of a state-appointed emergency manager.

[LANSING STATE JOURNAL](#)

[Flint water: KWA chief helped FBI in corruption case](#)

Beyond the two immediate challenges, Snyder said budget priorities continue to be economic growth, education, public safety and fiscal responsibility. His address highlighted continued signs of improvement in the Michigan economy overall with more than 440,000 new private-sector jobs since he took office in 2011, improving home prices and steady declines in the state unemployment rate.

"This plan provides a balanced approach to addressing our special challenges while continuing to pay off debt, save money for the future and make needed investments in critical areas," Snyder said.

For the first time since Snyder took office, the budget does not call for an increase to the Budget Stabilization Fund, better known as the Rainy Day Fund. Snyder said the balance in that fund stands at about \$611 million, up from \$2.2 million when he took office.

[LANSING STATE JOURNAL](#)

[Flint water: Who decided what?](#)

The total budget includes federal funds. The main state funds, the general fund and the School Aid Fund are estimated to have 2017 revenues of \$10.6 billion and \$12.8 billion respectively.

A 'healthy future' for Flint residents

Snyder's budget message said that "clean drinking water is a necessity," and "Flint residents shouldn't have to rely on bottled water and water filters just to drink a glass of water or safely cook a meal."

The governor "is dedicated to ensuring the situation is dealt with quickly and thoroughly, so that Flint's water is safe for residents once again."

Snyder said the proposed \$195.4 million for Flint is spread across several state agencies and "will be used to continue the work to provide Flint residents with immediate needs, like bottled water, water filters and replacement cartridges while also investing in longer term needs such as specialists and staff, including nurses and epidemiologists, support for health care access for Flint children, payment for testing and studies, and the ongoing treatment of children."

The proposal for Flint includes \$30 million Snyder already announced as part of a plan to credit Flint residents for part of the cost of water that has been billed to them since April 2014 but that they can't drink.

It also includes \$37 million for safe-drinking-water efforts; \$15 million for food and nutrition to combat lead exposure; \$63 million for improving the physical, social and educational well-being of Flint children and other vulnerable residents, and \$50 million to be placed in a reserve fund for future expenses that are yet to be determined.

The proposed Flint funding for 2017 is on top of about \$37.4 million in supplemental appropriations the Legislature approved for the 2015-16 fiscal year.

"Additional funds will be needed in the coming years to ensure Flint residents receive the care and services they need for a healthy future," the governor's budget statement said.

A couple dozen protesters, many wearing "Flint Lives Matter" T-shirts, gathered outside the room where Snyder was giving his presentation. They shouted chants such as: "Fix the pipes!" "No water, no peace!" and "Not enough!" referring to the amount of money Snyder was proposing for Flint.

Senate Minority Leader Jim Ananich, D-Flint, said the governor's proposals for Flint "seem to match the areas we have been stressing" — health, education and infrastructure.

"Our challenge now is to make sure that the state delivers, and we don't take our foot off the gas," Ananich said in a news release.

Sen. Mike Kowall, R-White Lake, said the Senate has signed off on the chunk of money for Flint.

"We've looked at the numbers, and if this is what it's going to take to get good water for the people in Flint, then so be it," Kowall told the Free Press.

Lorenzo Avery Jr., 32, of Flint was one of the protesters who came from Flint to Lansing. He said he plans to return to the Capitol for as long as it takes to remove Snyder from office.

"I'm here to be a pain in his behind," Avery said. "We want him removed. Everyone who had something to do with it should be removed, too. We're in a Third World country. Until we get him out of here, we won't stop."

The budget calls for \$25 million in infrastructure funding for needs specific to Flint and \$165 million to be set aside for statewide infrastructure needs in a newly created Michigan Infrastructure Fund.

Brandon Dillon, chairman of the Michigan Democratic Party, said the budget "contains no serious commitment to replace the lead pipes poisoning children and families in Flint."

A 'brighter future' for those in Detroit schools

Snyder's 10-year, \$720-million plan for Detroit Public Schools includes \$200 million in start-up and transition costs, including space consolidation, instructional support and investment in academic programs.

"These funds will help get the school district back on firmer financial footing and, more importantly, help ensure Detroit children are receiving a quality education, setting them on a path toward a brighter future."

Rep. Al Pscholka, R-Stevensville, said he's not sure he wants to take the DPS money out of the tobacco settlement fund. While he wouldn't specify what alternative he is looking at, Pscholka said: "I think there's a way that we can get the DPS funding in place without using the school aid, tobacco settlement or other general fund revenues."

For the broader K-12 budget, Snyder's proposal calls for \$150 million in extra funding for the school foundation allowance, which he said equates to \$60 to \$120 per pupil.

The budget also provides for \$15 million extra for career and technical training and a \$2.1-million investment in science, technology, engineering and mathematics programs to encourage students to pursue those fields.

Help for colleges and universities

The Free Press reported Tuesday that Snyder wants lawmakers to pump an additional \$61.2 million into Michigan's public universities, an increase designed to restore funding levels to what they were in 2010-11, the amount approved shortly before Snyder took office on Jan. 1, 2011.

Snyder's plan calls for an overall 4.3% increase, with half earmarked for across-the-board increases to all the state's universities and the other half added to performance-based funding.

Snyder called for a tuition increase cap for next year of 4.8%. That's up from last year's cap of 3.2%. If universities violate the cap, as Eastern Michigan and Oakland universities did last year, they will forfeit performance funding.

For community colleges, the budget calls for an overall funding increase of 2.9%.

Health, municipal support and cops

The budget calls for a 3.9% increase in constitutional revenue sharing with cities, villages and townships, bringing the total amount to \$781.5 million.

On public safety, Snyder said an additional \$9.5 million for the Michigan State Police would support a trooper school expected to produce 85 new recruits.

The budget also includes \$8.5 million for an academy to graduate 350 additional corrections officers for the state prison system, which is grappling with a large number of retirements.

The state prisons budget, which comes almost exclusively from the general fund, remains at \$2 billion, despite several cost-cutting initiatives, such as the privatization of prison food service.

In the area of health and human services, Snyder announced a \$25.6-million plan to expand the Healthy Kids dental plan to all people younger than 21 in all Michigan counties, bringing the total number covered to just shy of 827,000.

Officials say the budget was revised in recent weeks to deal with the Flint public health crisis as the extent of health and infrastructure problems grew, along with preliminary plans to address them.

The governor wants lawmakers to approve \$50 million as a supplemental appropriation for 2015-16 to operate Detroit Public Schools while his plan for other changes in the district is working its way through the Legislature, Budget Office spokesman Kurt Weiss said.

"All of Michigan's children deserve a quality education that prepares them for future success," Snyder said in his budget message. "The financial stress currently facing the Detroit Public Schools must be resolved in order to ensure Detroit's schoolchildren have the same opportunities for success as other children in our state."

Michigan also faces a string of lawsuits and investigations as a result of the Flint lead crisis.

In April 2014, the city, while under the control of a state-appointed emergency manager, switched the source of supply from Lake Huron water supplied by the City of Detroit to Flint River water treated at the Flint's city treatment plant. Michigan Department of Environmental Quality officials have acknowledged they made a mistake when they failed to require needed corrosion-control chemicals to be added to the water.

As a result, lead leached from pipes and fixtures into the drinking water and test showed lead levels spiked in the blood of some Flint children. Although the city switched back to Detroit water in October, officials say the potential for harm continues because of damage done to Flint's water distribution infrastructure.

State and federal investigations into Flint's environmental disaster are ongoing, and the city will remain under a state of emergency until at least mid-April. The lead contamination in Flint has drawn worldwide attention.

York kids' confirmed lead levels high

York Dispatch – February 11, 2016, By Katherine Ranzenberger

As members of Congress hold hearings on the Flint, Michigan, water crisis, more people are concerned about the levels of lead in their children's blood and the level of exposure their children have.

At first glance, York City children seem to show high lead blood levels at an alarming rate — 12.41 percent, or nearly four times the 3.62 percent of Flint children.

A closer look reveals those were initial, unconfirmed reports. More thorough testing showed only 2.11 percent of York City children tested had confirmed elevated blood lead levels.

In York City, 34 of the 1,612 children tested had levels of lead in their blood at two times or more the federal standard, according to the state Department of Health.

The Pennsylvania 2014 Childhood Lead Surveillance Annual Report states confirmed elevated results are defined as one venous blood draw with a result of 10 micrograms per deciliter of blood. The Centers for Disease Control and Prevention defines elevated levels at 5 micrograms per deciliter of blood.

Michigan follows the recommendation of the CDC for confirmed levels, confirming cases that are 5 micrograms per deciliter of blood or higher.

The Pennsylvania report warns not to compare the results of the report with states that have universal or mandatory testing because it is not universal in the commonwealth. Michigan is a mandatory testing state.

At either level, it's hardly something to ignore.

"There is no safe level for lead in the blood," said Dr. Matt Howie, medical director of the Bureau of Health for the City of York. "Lead is a villain that's not going to go away. It's all about the paint, and window sills are the worst culprits."

That brings up another big difference between Flint and York's lead situation.

"Flint's issue is a water-quality issue," Howie said. "Aging houses in this country are the problem. The dominant source of high blood lead levels is lead paint and dust."

York v. Flint: Flint has dominated the news cycle lately, from presidential candidates discussing the lead leaching into the water to congressional hearings on the safety of the drinking water in the Michigan city. Flint is located in Genesee County in the Saginaw Bay region of the state.

According to the Michigan Department of Environmental Quality, in 2013 — the most recent year for which reliable data is available, according to the state's Department of Health and Human Services — 3.62 percent of the children in Genesee County had confirmed blood lead levels above 5 micrograms per deciliter, the federal threshold for dangerous levels of lead in the blood.

In 2013, only 11 of the 7,067 children tested in Genesee County had blood lead levels above 10 micrograms per deciliter of blood, or 0.16 percent. These are confirmed reports.

In Pennsylvania, the state Department of Health recently released its 2014 childhood lead surveillance annual report, which showed only 1.43 percent of children in York County had confirmed elevated blood lead levels. However, this is confirmed at the 10 micrograms per deciliter level, twice the federal threshold.

National online publication Vox posted a story Feb. 3 stating blood lead levels of 12.41 percent of York City children were above the federal threshold. These are the unconfirmed reports.

For comparison, 10.11 percent of York County children had unconfirmed elevated blood lead levels, according to the state Department of Health.

In 2014, 122 children of the 3,045 tested in Flint had elevated lead levels above 5 micrograms per deciliter, or 4.01 percent of children tested. That is up from 2013, when 85 of the 2,345 children tested, or 3.62 percent, were above the federal threshold.

Only eight children in Flint were above the 10 micrograms per deciliter threshold Pennsylvania uses, or 0.3 percent of those tested. Michigan has not released 2014 results that show how many children were above the 10 micrograms threshold.

In York City, 34 of the 1,612 children tested had levels of lead in their blood above 10 micrograms per deciliter, or 2.11 percent of those tested.

Testing kids in York County: Typically, Howie said, children in York County are tested at 9 months and 18 months during their checkups. Children are more mobile at 18 months, he said, and it's a time when they're exploring and putting more things in their mouths. The federal standard is to test children at 1 and 2 years of age.

Children have to do a finger stick test, where blood is drawn from a capillary on their finger. If the lead level comes back high, Howie said, doctors will then confirm it with a venous draw of blood.

"This elevated level could be a false positive," he said. "The finger could not have been cleaned correctly, and the kid could have lead dust on their finger."

The cases in Flint that were reported were confirmed through venous draws, said Angela Minicuci, a spokeswoman for the Michigan Department of Health and Human Services.

"We do have varying percentages across the county," she said. "This depends on the age of the home these children grew up in."

Dealing with lead: Howie said the main culprit of lead in children's blood is from paint or dust that makes its way into the child. York has a lot of buildings built before 1978, when building standards changed to exclude lead from paint.

"This is a chronic and old problem," he said. "Any city that has aging housing stock, you're going to have this issue."

Wet mopping your floors twice a week and wiping down counters frequently will prevent dust that could contain lead from collecting on flat surfaces, Howie said.

"A good layer of latex paint over lead paint can make a big difference," he said. "Make sure it's well maintained, too."

Making sure baby furniture such as cribs is new is also a key in making sure your child isn't exposed to lead, Howie said. Older baby furniture that may be passed down through generations may contain lead paint, and children that age put everything in their mouths.

"Make sure it's been made after 1978," Howie said. "That's not an area you want to save money in."

State defends Legionnaires' response in Flint crisis

WZZM 13 – February 11, 2016

DETROIT — State health officials defended their response to the Legionnaires' disease outbreak in Flint, discounting concerns that infighting hurt public health.

"We rely on strong relationships with our partners at the local level including primary care providers, community organizations, health plans, and most importantly our local health departments," Nick Lyon, director of the Michigan Department of Health and Human Services, said in a statement.

The response came after the *Free Press* reported harsh criticisms of the state from the Genesee County Health Department, which was investigating an outbreak of the bacteria that killed nine people in 2014 and 2015.

Genesee County on Monday released emails in which county health officials blasted the Michigan Department of Environmental Quality and the Department of Health and Human Services, voicing concerns about delays, incompetence and possible cover-ups of the outbreak.

The outbreak began in 2014 after Flint switched its drinking water source to the Flint River after using Detroit's water system for decades. The decision to switch was made when Flint was run by a series of emergency managers appointed by Gov. Rick Snyder.

Flint officials and others have questioned what Snyder knew and when he knew it. Snyder announced the outbreak last month, saying he'd just learned of it. On Friday, Harvey Hollins III, who runs the governor's office of Urban and Metropolitan Initiatives, told the *Free Press* that he learned of the Legionnaires' problem in March 2015 but didn't alert Snyder because there wasn't enough information on it.

Emails show state and county officials investigated it for more than a year before Snyder's remarks.

To show state health officials took the outbreak seriously, Lyon released emails from his own department showing state health officials working on it in October 2014, though one of those raised questions about the governor's time line.

Susan Bohm, a disease specialist in the DHHS, wrote in an Oct. 17, 2014, email that she's spoken with the state's top drinking water officials, Liane Shekter Smith, about the outbreak.

"What she did share with me was interesting — that there have been numerous complaints about the Flint water, that the governor's office had been involved, and that any announcement by public health about the quality of the water would certainly inflame the situation," Bohm wrote.

Snyder spokesman Dave Murray said the governor's office didn't know about the Legionnaires' outbreak until March 2015.

"The departments were working with the Genesee County Health Department regarding Legionnaires' outbreaks in Genesee County and other places," Murray said in an email. "But no one, at any level, brought to the governor that there were potential concerns about Legionnaires' Disease and any connection to the Flint River until January of this year."

Snyder last week announced the firing of Shekter Smith, who could not be reached for comment. An email to Bohm seeking clarification was answered by a department spokeswoman, Jennifer Eisner.

"I've followed up with her and can confirm that the numerous complaints comment in Susan's email referred to the smell, taste, and look of the Flint water and not Legionnaires," Eisner wrote to the *Free Press*.

EPA says water tests show filters are crucial

Nano News – February 11, 2016, By Emma Lincoln

The city's water supply became contaminated with lead when it switched its source from Detroit to the Flint River in 2014 to save money.

Rick Snyder (R) has said he didn't know about an uptick in deadly Legionnaires' disease around *Flint* until this year, but newly released emails show a Snyder aide had been warned last March.

A spokesman for Snyder rejected the report by the liberal group Progress Michigan on Thursday.

City residents were outraged that state and federal officials did not sound the alarm, even as their children were exposed to lead poisoning that can severely impede physical and mental development.

Wurfel, who resigned shortly after the mayor of *Flint* declared a state of emergency over the water crisis in November 2015, downplayed the point that the *Flint* River was causing the outbreak.

"This situation has been explicitly explained to MDEQ and numerous city's officials ..." 87 cases were reported in the county over 17 months, about half of which originated at a single *Flint* hospital.

Federal officials had been alarmed just a week ago by water samples of unfiltered water from the Michigan Department of Environmental Quality that suggested *Flint's* lead contamination in parts of the city was stronger than residential faucet filters can handle.

"He's made the leap formally in his email that the uptick in cases is directly attributable to the river as a drinking water source – this is beyond irresponsible, given that is his [sic] department that has failed to do the necessary traceback work to provide any conclusive evidence of where the outbreak is sourced", Wurfel wrote.

Rick Snyder has always maintained that he learned of a spike in Legionnaires cases sometime in early January. "I want to make sure in writing that there are no misunderstandings regarding this significant and urgent public health issue". The emails also show some angst in the Snyder administration over the controversy.

Wurfel said it would be "highly unlikely" to find Legionella bacteria around the water treatment plant.

A wide-ranging US energy bill, the country's first major energy measure in more than eight years, was close to stalling in the Senate on Thursday as the chamber struggled to strike a deal to help *Flint*, Michigan cope with a drinking water crisis

"The issue was not brought to the Governor's attention until January of this year", he said.

The state Department of Health and Human Services had already begun assisting the county in the fall of 2014, and the Legionnaires' investigation had become "very intensive" in early 2015, said Dr. Eden Wells, Michigan's chief medical executive.

<http://nanonews.org/epa-says-water-tests-show-filters-are-crucial/>

State gave it's own workers in Flint pure water coolers

Pop Herald, February 11, 2016, By Noah Barnes

"For decades, Flint was known as the birthplace of GM and for playing a key role in the creation of the United Auto Workers".

The Board of State Canvassers rejected petitions Thursday to recall the Republican governor over his handling of Flint's water. The ultimate cost of this misguided, risky decision will not be known for decades.

John Kasich was the only candidate to get a question on the Flint water issue.

The city made the switch to the Flint River in April of 2014. That's wrong. Worse than that, people were exposed to lead.

That occurred after Flint announced that it had briefly failed some drinking-water standards apart from the lead contamination.

MI spent more than \$4,200 to supply employees at the state office in downtown Flint with bottled water.

And people like Wiley believe that's why the city is at the point it is now.

Casey said Thursday that he was unaware of specific Pennsylvania communities affected by high lead levels or of any instances of the state not notifying residents of issues.

An administration representative was not immediately available for comment. It can cause serious damage to the central nervous system, kidneys, to reproductive organs, disrupt metabolic processes and lead to death.

Roy was one of many students who researched the water supply in Flint.

Democrats in the U.S. Senate were preparing to unveil legislation as early as Thursday aimed at aiding Flint, but would not provide details. In the meantime Flint residents didn't get a choice. Snyder has promised to put forward more funding for Flint in his annual budget proposal, but he has not said how much.

The water coolers were introduced after Flint officials warned residents about elevated levels of a disinfection byproduct called trihalomethane in the city's water.

"How could an entire population drink tainted water when you know the people who are paid to protect them are getting clean this is unfair", Siddharta Roy said, a Virginia Tech grad student.

The water crisis in Flint, Mich., has been erupting over the course of the past few weeks. Casey is supporting a bill that would require the EPA to notify the public if state officials don't alert residents within 15 days.

However, Snyder's Press Secretary, Dave Murray, said the administration has no timeline for when the city's water system will be safe to drink again without filters. "The state broke it. They need to fix it". The corrosive water lacked adequate treatment and caused lead to leach from old pipes - and there has since been much discussion about who should be held accountable. No signs prohibited the public from drinking water from the cooler.

The Michigan Legislature is poised to approve \$28 million in additional funding to address the lead contamination of Flint's water.

Lead levels are alarmingly high among children across the entire state, not just Flint, the Detroit News reported. "It's not going away", chief medical executive Dr. Eden Wells of the Michigan Department of Health and Human Services said, according to The Detroit News.

"Whether in Flint or elsewhere in America, we have a responsibility to care for our children".

Residents are outraged that they continue to receive water bills for the poisoned water in Flint.

"I strongly urge my colleagues to join us in our effort to help Flint recover from this unnecessary, man-made disaster".

<http://popheraid.com/2016/02/11/state-gave-its-own-workers-in-flint-pure-water-coolers.html>

Snyder ordered DEQ to withhold Flint lead test results, emails claim

MLive – February 10, 2016, By Gary Ridley

FLINT, MI – Gov. Rick Snyder and other state officials allegedly withheld lead testing results from county health officials while they worked to find ways to present the information to the public, according to emails obtained by The Flint Journal.

Local health officials say the governor and the Michigan Department of Environmental Quality withheld lead testing results, including results from a Flint elementary school, while the agency discussed the best way to present the information to the public.

But, Snyder's office said Wednesday, Feb. 10, that information was shared quickly after testing and denied withholding any information

Emails obtained this week from the Genesee County Health Department through the Freedom of Information Act show growing frustration on the county's part as it attempted to obtain information from the DEQ.

"MDEQ explained that the Governor prohibited releasing all Genesee County lead results until after the press conference," wrote Jim Henry, Genesee County's environmental health supervisor.

Henry, in an interview Wednesday, said county officials didn't learn of the test results until they were distributed following a press conference.

"They should have alerted the schools and they didn't," Henry said.

Gov. Rick Snyder announced Oct. 8 during a press conference that three buildings within the Flint School District tested above the federal limits for lead in the drinking water, including results of more than six times the federally allowable level at Freeman Elementary School.

The announcement included a plan to buy nine months of water from the Detroit Water and Sewerage Department to end the city's reliance on the Flint River as its drinking water source.

An additional \$4 million was requested for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the high lead rates were discovered.

Following the announcement, a meeting was held Oct. 16 with DEQ officials, including then drinking water chief Liane Shekter Smith, and Henry, according to the emails.

According to an Oct. 18 email Henry wrote to county Health Officer Mark Valacak summarizing the meeting, DEQ apologized for not releasing school lead results in a timely manner and claimed they were ordered by Snyder to delay the release.

The governor's office, when asked Wednesday denied they ordered the DEQ to delay releasing any information, but said the start of testing and announcement were only six days apart.

"The email seems to reflect someone summarizing a discussion at a meeting, and we are unsure what actually was said there," Snyder Press Secretary Dave Murray said. "We do know that the testing began on Oct. 2, it took some time to test 13 buildings, action was taken immediately and the Governor held a press conference in Flint to discuss the results on Oct. 8. There was no delay during that time period.

"People were quickly informed of the results in the schools, and that action on the fixtures with elevated levels was taken immediately."

The DEQ announced three days after the meeting that Shekter Smith was being reassigned. She was eventually suspended and ultimately fired Feb. 5.

However, the emails allege that the delays in test results didn't end there. Further testing was conducted at Freeman Elementary during the last week of October.

Henry emailed the DEQ's Laboratory Director George Krisztian on Nov. 3 and requested all lead testing results for water at Freeman Elementary. He added that his request should be treated as a FOIA request.

Krisztian declined the request, saying the samples collected from the school on Oct. 24 presented an "incomplete picture of the plumbing system" and that samples collected on Oct. 31 wouldn't be ready until Nov. 4, according to the emails.

"I am hoping to either have a conference call or a meeting in Flint with all the partners to review the results and discuss how we will present the information to the public," Krisztian wrote.

On Nov. 6, Henry again emailed Valacak, claiming he had talked with Krisztian and that Krisztian told him he had been instructed to withhold the information until the FOIA deadline of Dec. 2.

"MDEQ reminds me of a stubborn 2yr old child," Henry wrote. "Instead of doing what is right, they'll willfully take another spanking just to be defiant."

However, emails show county health officials didn't wait for the results before taking action.

Henry, in his Nov. 6 email, said he was directing county health staff to visit Flint schools, meet with administrators and ensure that water wasn't being consumed on the campuses in order to reduce the risk to students.

Flint Community Schools eventually released the results Nov. 9 in a press release after being informed of them by the DEQ.

"The Michigan Department of Environmental Quality informed Flint Community Schools that of 31 samples taken at the school on Oct. 24, samples from nine fixtures indicated water with lead exceeding 15 parts per billion, the threshold considered safe by the federal government," the district wrote in its press release. "The MDEQ informed FCS that the high lead levels were not detected in plumbing, but only in nine faucets and heads of drinking fountains."

The district had been under a self-imposed do-not-drink order for its water since late September.

DEQ officials said they still regularly work with other agencies on the city's water crisis and work to have positive relationships.

"The state DEQ is committed to having a good working relationship with the county and all partners at the local, state and federal level who are collaborating to ensure safe drinking water for the residents of Flint," said DEQ spokeswoman Mel Brown.

The city is in the national spotlight after elevated blood lead levels were discovered in some Flint children after the city changed its water source from Lake Huron water purchased from the Detroit water system to the Flint River in April 2014, a decision made while the city was being run by a state-appointed emergency manager.

State regulators never required that the river water be treated to make it less corrosive, causing lead from plumbing and pipes to leach into the water supply.

Even though the city reconnected to the Detroit water system in October, local and state officials have warned pregnant women and young children against using the water unless it has been tested because lead levels continue to exceed what can be handled by a filter.

Flint's crisis is Michigan's crisis

MLive – February 10, 2016, By Gilda Z. Jacobs

Gilda Z. Jacobs is president and CEO of the Michigan League for Public Policy. She served in the Michigan House and Senate from 1999-2010.

Whether you're Gov. Rick Snyder or Hillary Clinton, Rachel Maddow or Jimmy Fallon, Madonna or Ziggy Ansah, it's all about Flint right now. The same is true for us here at the League. This man-made disaster has drawn the national spotlight to Michigan for all the wrong reasons. Every day another story or scandal arises. But for me, the main question is: What do we do now?

Fixing the poisoning of Flint's water will require action in every single area of public policy. It is a public health issue. It is an environmental issue. It is an infrastructure issue. It is an education issue. It is an economic issue. It is a racial issue. And down the road, it will likely become a corrections issue. State government largely caused this problem, and at every turn, it must be there to help. This is a battle that must be fought on all fronts, with offensive and defensive strategies, and the League is committed to that.

As heartbreaking as this crisis is, it has the potential to draw attention to the larger health plight of low-income kids and families. Unfortunately, lead poisoning is yet another issue that inordinately affects low-income residents and people of color. This is certainly true in Flint, with 40 percent of people living in poverty. With many social determinants for health in kids' environment and community, the odds are stacked against low-income children from the onset.

Lead exposure was already a problem for kids in poverty, due largely to paint in old houses. But because of the Flint debacle, these kids have been drinking and bathing in lead. Low-income kids are at particularly high risk of lead poisoning due to poor diets and nutritional deficits. There is currently no traditional grocery store in Flint where healthy foods like fresh fruits and vegetables and milk are available. There is one school nurse for the entire Flint school district. Economic struggles also create high-stress environments that take a toll on kids' health.

The lifelong consequences of lead poisoning have been documented, including developmental and behavioral issues, learning disabilities, academic struggles, and even criminal behavior and potential incarceration. These kids didn't ask for this. The least their government can do is help them through these challenges.

The failure in Flint has brought to light another issue. Michigan as a whole has an infrastructure problem, and it's due to years of disinvestment. We called the Flint water crisis a "canary in the coal mine" for future infrastructure collapses and related health disasters around the state.

Flint's catastrophe points out the need to remove and replace lead water pipes in the city and anywhere else in the state. We must all agree that we can't keep running our drinking water over poisonous pipes, regardless of what additives are in it. Detroit public school buildings are leaking and literally falling apart, full of mold and rodents. Kids can't learn in an unsafe environment. We can't keep cutting funding and expect the infrastructure that depends on it to hold up.

The League sees the need for a three-pronged approach to fixing Flint and preventing such a disaster from ever happening again. First, the state must address the current crisis, updating the city's infrastructure and restoring a safe and reliable water system, getting all kids tested for lead, and implementing educational, nutritional and medical safeguards to help those who have been exposed.

Second, the governor and legislators must outline a proposal for ensuring Flint kids have the care they need throughout their lifetime. This includes making a decades-long commitment in funding and services that lasts beyond any one governor or Legislature. We can't leave the future of these kids at the mercy of political whims.

Third, policymakers must heed the current crises in Flint and Detroit Public Schools as a sign of things to come, and invest in and update our infrastructure accordingly. The disaster in Flint should never have happened, and it can never be made completely right. But for our state government, learning from their mistakes and vowing not to repeat them is a crucial step.

Manslaughter charges possible in Flint water crisis, says top investigator

The Washington Post – February 10, 2016, By Michael E. Miller

As a probe begins into the water crisis gripping Flint, Mich., a top investigator announced Tuesday that if officials are found to have been grossly negligent, they could face charges as serious as manslaughter.

“We’re here to investigate what possible crimes there are, anything [from] involuntary manslaughter or death that may have happened to some young person or old person because of this poisoning, to misconduct in office,” said Todd Flood, special counsel for the state attorney general’s office who is in charge of the investigation. “We take this very seriously.”

Since the city switched suppliers in April 2014, corrosive tap water has caused the level of lead in kids’ blood to soar and has sparked fears of permanent neurological damage. In some cases, the water has been so poisoned by lead that it qualified as “toxic waste.”

A spike in Legionnaires’ disease led to 10 deaths during the same time period, although it’s not clear whether the bacterial outbreak was linked to drinking the water, according to *Mlive*.

Outrage over those deaths and the possible long-term effects of lead poisoning hung over Tuesday’s news conference. Flood was brought in to lead the investigation last month because the Department of the Attorney General is defending Gov. Rick Snyder (R) and various state departments against lawsuits brought by Flint residents.

Flood described a number of possible outcomes of the investigation. He said it could turn out that the crisis was simply a result of “honest mistakes,” the Associated Press reported.

But it could also turn out that city, county or state officials were guilty of a “breach of duty” or “gross negligence,” exposing them to possible criminal or civil actions, he said.

Flood said that the severest possible charge, manslaughter, was “not far-fetched.” He compared charging officials with manslaughter over the water crisis to charging construction workers with the same crime for leaving open manholes unattended, resulting in death.

He said he could also pursue restitution against both private companies and governments on behalf of Flint residents affected by the water crisis, according to the *Detroit News*.

Flood’s team will consist of nine full-time investigators, including former state and Detroit police officers as well as Andrew Arena, former head of Detroit’s FBI office.

A separate federal investigation also has been launched and will include prosecutors from the U.S. attorney’s office in Detroit as well as the FBI, the U.S. Environmental Protection Agency’s Office of Inspector General and the EPA’s Criminal Investigation Division, *Reuters* reported last week.

The two investigations will try to suss out who is to blame for Flint’s dangerous drinking water.

So far, state and federal officials have been trading blame, often along political party lines.

[Hope --- and clean water --- remains elusive for the people of Flint]

Last week, the EPA’s acting water chief, Joel Beauvais, told Congress that Michigan — under the leadership of Snyder — had ignored federal advice to treat Flint’s water for corrosive elements, which are believed to have eroded old lead pipes and contaminated drinking water. Beauvais also said the state delayed for months in telling the public about the health risks, according to the AP.

State officials shot back, however, claiming that the EPA did not act urgently enough, either.

Not even city officials are exempt from scorn. Although the city was under the control of a state-appointed emergency manager when it switched from Detroit water to the highly corrosive Flint River, it was the Flint City Council that voted 7-1 on March 25, 2013 to end its contract with Detroit, a decision that opened the door for the later debacle, according to the Detroit Free Press.

Even then, though, Snyder's office was heavily involved in the decision, the Free Press reported. The morning before the Flint City Council vote, the state's Democratic treasurer called Snyder's chief of staff to discuss "Flint water supply alternatives," according to the Free Press. And the next morning, the treasurer held two more meetings regarding the switch.

Snyder, a tech venture capitalist elected in 2010 on promises to turn around the state's floundering economy, has accepted some blame for the crisis. He has apologized — calling the crisis a "disaster" and his "Katrina" moment — and promised to fix it. He also has released his emails on the subject.

But Snyder also has claimed that his top aide's concerns about Flint's water were "blown off" by Michigan's Department of Environmental Quality, an agency under the direction of a man whom Snyder appointed.

As the state and federal investigations proceed behind closed doors, public records are beginning to shed more light on the crisis and who might be at fault.

Last week, for instance, a liberal group released records showing that Snyder's office knew of the Legionnaires' outbreak more than nine months before the governor announced the problem this January, according to the Free Press.

"More than 40 cases reported since last April," wrote Brad Wurfel, then the director of communications for Michigan's Department of Environmental Quality, in an email to Snyder's director for urban initiatives and DEQ Chief Dan Wyant, a Snyder appointee. "That's a significant uptick. More than all the cases reported in the last five years or more combined."

A health official in Genesee County, where Flint is located, was "putting up the flare" and had "made the leap formally in his e-mail that the uptick in cases is directly attributable to the river as a drinking water source," Wurfel wrote.

Snyder's office released a statement saying that the governor "was not briefed on this issue until January 2016" and pointing to passages in Wurfel's email calling the link to the city's water as "premature" and "beyond irresponsible."

But Snyder's critics pounced on the public documents.

[Flint's water crisis reveals government failures at every level]

"For months the public has been asking Gov. Snyder what he knew and when he knew it regarding the Flint crisis and this e-mail shows that one of his top aides was aware nearly a year ago that county health officials were concerned that the switch to the Flint River could be potentially deadly," said Lonnie Scott, executive director of Progress Michigan, the group that obtained the email.

On Tuesday, the Free Press published its own investigation into thousands of other emails that suggest city and state officials were aware of the Legionnaires' outbreak eight months before Snyder disclosed it and that those officials also withheld information about the problem from county health investigators.

"We are very concerned about this Legionnaires' disease outbreak," Laurel Garrison of the Centers for Disease Control and Prevention wrote an April 27 email to Genesee County health officials, the Free Press reported. "It's very large, one of the largest we know of in the past decade, and community-wide, and in our opinion and experience it needs a comprehensive investigation."

The CDC official added: "I know you've run into issues getting information you've requested from the city water authority and the MI Dept of Environmental Quality."

Five weeks later, however, an official from the state's Department of Health and Human Services emailed Genesee County health officials to lambast them for speaking to the CDC.

"Relative to communications around the investigation, I believe that CDC is in agreement that their involvement really should be at the request of the state, rather than the local health department," Collins said, according to the Free Press. "To be clear, we do value the skills and resources of our CDC colleagues, but we also recognize that their involvement needs to have some structure," and "I want to reinforce the necessity that investigation communications from the Genesee County Health Department need to be directed to staff at the MDHHS."

By December, county health officials were so frustrated they accused the state of a "deliberate cover-up."

"The state is making clear they are not practicing ethical public health practice," Tamara Brickey, the Genesee County Health Department's public health division director, wrote in a Dec. 5, 2015 email to colleagues. "Now evidence is clearly pointing to a deliberate cover-up. ... In my opinion, if we don't act soon, we are going to become guilty by association."

Whether any of these officials will be charged as a result of the two ongoing probes remains to be seen.

On Tuesday, state officials said they were taking Flint's water crisis seriously.

"We're not going to shortchange justice," said Bill Schuette, the attorney general, sitting beside Flood, Arena and another investigator. "We're not going to do justice on the cheap. We're going to have a full and complete investigation, and where the truth goes, that's where we'll go."

On Wednesday, Snyder will propose an additional \$195 million in state spending to address the city's emergency, including \$25 million to replace lead-contaminated pipes, a spokesman told the AP.

The same day, the House Democratic Steering and Policy Committee will hold a hearing on Flint's water crisis.

Snyder turned down an invitation to speak, according to CNN.

Subject: RE: Need ROM Estimate for Flint Water Crisis by COB Today (2/11/16)

Importance: High

Hi Everyone --

CHAMPS can implement the Beneficiary Eligibility and Provider Enrollment changes needed by 2/22/16 to support Option 1, with the following considerations.

1. Due to time constraints, we are moving forward even though final policy decisions have not been made.
2. Bridges will end-date the existing eligibility record and set a new eligibility start date when the Program Code of "F" is added to the beneficiary record that is sent to CHAMPS.
3. MICHild beneficiaries who receive the Program Code of "F" will appear as Medicaid beneficiaries in CHAMPS because the Program, Scope and Coverage code received from Bridges are the same as the Medicaid beneficiaries. Thus, managed care rates, capitation payment, fee-for-service claim payments and other State and Federal financial reporting will show this population as Medicaid (**and will not receive enhanced CHIP funding**) until Bridges provisions a new TOA code for the MICHild population.
4. System testing can occur between Bridges, CHAMPS and MAXIMUS on February 18th and 19th if the required data is provided by Bridges.
5. In order to assist access-to-care, the Beneficiary Eligibility, Provider Enrollment, CRM and downstream interface changes (to MAXIMUS and Magellan) deploy to production the night of Friday, February 19th.
6. All other subsystem changes related to payment processing will deploy to production on February 26th. (This does not affect access-to-care).

Please advise if this has any impact on the planned 3/25/16 (16.03) go-live date for CC2525 IRS 1095B transactions.

Thanks,

Jerry Armstrong

Subject: Need ROM Estimate for Flint Water Crisis by COB Today (2/11/16)
Importance: High

Hi Roger and Jerry,

As discussed during the Flint Medicaid Options Brainstorming session today from 9-1, please provide a ROM estimate by COB today to Robert Linnan and James Carver for your impacted systems.

Please let me know if you have any questions.

Thanks,

Gretchen L. Blackwell

Health officials: No confirmed cases of Zika virus in MI

Wood TV – February 12, 2016

GROSSE POINT FARMS, Mich. (WOOD) — State health officials say they have no confirmed cases of the Zika virus in Michigan despite reports.

WXYZ-TV in Detroit reported Thursday that a woman from Grosse Pointe Farms was in the hospital with flu-like symptoms. The woman said that doctors, along with Centers for Disease Control and Prevention officials, believe a mosquito bite she got last week in Florida is the cause.

However a spokesperson with the Michigan Department of Health and Human Services told 24 Hour News 8 they don't have confirmation of a Zika case in the state.

Zika virus disease is mainly spread by mosquitoes and can cause fever, rash and joint pain, but most people infected experience mild or no symptoms. There is no vaccine for the Zika virus.

The U.S. Centers for Disease Control and Prevention have warned pregnant women to take precautions because the Zika virus could be linked to a rare birth defect that causes brain damage and an abnormally small head.

The Michigan Department of Health and Human Services urges anyone who believes they may have been exposed to the Zika virus to contact their doctor.

Possible lead exposure-miscarriage link probed in Flint water crisis

MLive – February 11, 2016, By Ron Fonger

FLINT, MI -- The pediatrician who exposed rising blood lead levels in young children in Flint and the state of Michigan are separately investigating whether pregnant women who drank the city's tainted water had abnormally high miscarriage rates.

Dr. Mona Hanna-Attisha, of Flint's Hurley Medical Center, and the state Department of Health and Human Services confirmed their work is already underway, but each said it is premature to draw any conclusions.

The Centers for Disease Control and Prevention says too much lead in a pregnant woman's body puts her at risk for miscarriage, as well as increasing the risk of a baby to be born too early or too small.

That's because lead can cross the placental barrier, exposing both mother and unborn child to the toxin.

In addition to increased risk of miscarriages, lead can damage a developing baby's nervous system and even low lead exposures in developing babies have been found to affect behavior and intelligence, the CDC says.

Late last month, pregnant women and children under 6 were told by state, local and federal officials to stop using even filtered Flint tap water unless it has been tested for lead.

Pregnant women and children under 6 are being told by state, local and federal officials to stop using tap water unless it has been tested for lead.

Officials announced during a Friday, Jan. 29, news conference that recent lead testing found 26 sites across the city with readings of 150 parts per billion or more of lead — 10 times the federal action limit.

Testing from the U.S. Department of Environmental Quality discovered at least one home with lead levels above 4,000 ppb.

Jennifer Eisner, a spokeswoman for the state DHHS, said epidemiologists in the agency are looking at the possible miscarriage-lead exposure link, and Hanna-Attisha said she began her work two months ago as a part of her work with the pediatric health initiative in Flint.

Hanna-Attisha is heading the initiative, which is a collaboration between Hurley, Michigan State University's college of human medicine and other community organizations.

The effort is will be a collaboration between Hurley Medical Center, Michigan State University's college of human medicine and other community organizations.

"We are researching that now," she said. "(We are researching) all maternal fetal complications that could have been from lead and (total trihalomethanes). Lead was used as an abortion pill in the 1920s."

Exposure to both lead and total trihalomethanes (TTHM) are associated with low birth weight, congenital malformations and male infertility, and levels of each rose in city water while the Flint River was used as Flint's water source.

Data on miscarriages is maintained by DHHS, but currently available data doesn't go beyond the end of 2013, four months before the city's water source was changed from Lake Huron to the river.

After that change to a much more corrosive water source, lead increasingly leached into Flint tap water and damaged a protective phosphate coating in transmission pipes.

That protective coating is still being rebuilt — nearly four months after the city stopped using the river as its water source.

Professor Marc Edwards, whose reports on rising lead levels in Flint's water helped draw national attention to the city, said fetal death rates should be reviewed but said it's not certain researchers will be able to make a connection.

Edwards published a study in late 2013, showing stillbirth rates in Washington, D.C., rose in parallel with spikes in lead levels there.

"Comparing Washington, D.C., to Flint, the water lead levels were about three times higher and the population exposed was about five times higher in D.C.," Edwards wrote in an email to The Flint Journal-MLive.

"Both of those factors work in favor of scientifically establishing a strong association between water lead exposures and the miscarriages and fetal death in D.C.," the email says. "But it is definitely something that should be examined."

Marcie Treadwell, director of the University of Michigan Health Systems' Fetal Diagnostic Center, agreed that a possible connection between lead exposure and fetal death should be explored in Flint.

Treadwell said she's not familiar with human studies linking lead exposure to higher miscarriage rates, but animal studies have shown negative effects on brain development.

"We see the downstream effects in animal models. ... There are some really serious concerns with lead exposure that extend prenatally," she said.

Part of the uncertainty is that the degree of lead exposure Flint mothers were subjected to will never be known.

Lead leaves the bloodstream within weeks of exposure and lead levels have varied from home to home, depending on factors including whether water flowed to homes through lead service lines and whether homes had lead or lead solder in indoor plumbing.

Exposure questions also remain because while city testing showed rising lead levels in the water, officials for the city have acknowledged they filed false reports in 2014 and 2015, certifying that they tested water only in homes at the highest risk of elevated lead levels.

Flint officials filed certified documents with state regulators that claimed the city only tested Flint River water from homes where residents were at the highest risk of lead poisoning, but records obtained by The Flint Journal-MLive through the Freedom of Information Act show those claims were false and may have delayed efforts to fix the public health emergency here.

The Journal reported in November that the city's own records showed only eight of 68 sample sites in 2015 could be shown to have lead service lines, potentially underestimating the extent of lead poisoning in the city.

Flint water's high lead levels kept from city schools until after Gov. Snyder press conference

MLive – February 11, 2016, By Gary Ridley

FLINT, MI – Flint schools did not receive water test results showing three of its buildings had high lead levels until roughly three hours after Gov. Rick Snyder and other state officials held a press conference on the issue, according to emails obtained by The Flint Journal.

Democrats blasted Snyder on Thursday, Feb. 11, after the Flint Journal revealed emails from Genesee County health officials who alleged the governor ordered Department of Environmental Quality officials to delay releasing lead test results until after the Oct. 8 press conference.

Snyder, during a Thursday visit to Flint, denied issuing such an order.

"No, that was absolutely inaccurate what was reported, and again, in terms of making allegations along those lines, I didn't delay anything," Snyder told reporters on Thursday.

Local health officials, in emails obtained by The Flint Journal through the Freedom of Information Act, alleged the governor and the DEQ withheld lead testing results, including results from Freeman Elementary School, while officials discussed the best way to present the information to the public.

An Oct. 16 meeting took place with DEQ officials, including then-drinking water chief Liane Shekter Smith, and Genesee County's Environmental Health Supervisor Jim Henry, according to the emails from the county health department.

In an Oct. 18 email Henry wrote to county Health Officer Mark Valacak summarizing the meeting, he said DEQ officials apologized for not releasing school lead results in a timely manner and claimed they were ordered by Snyder to delay the release.

"MDEQ explained that the Governor prohibited releasing all Genesee County lead results until after the press conference," Henry wrote.

The DEQ announced three days after the meeting that Shekter Smith was being reassigned. She was eventually suspended and ultimately fired Feb. 5.

In an email sent about three hours after the end of Snyder's Oct. 8 press conference, the policy and legislative affairs deputy director for the DEQ emailed Flint schools Superintendent Bilal Tawwab and Shared Services Director Anthony Sitko to provide the school with the testing results.

"Attached are the initial sampling results from 13 schools that were tested last week," the DEQ's Maggie Pallone wrote in the email. "I apologize that we didn't get these to you earlier today."

The email didn't explain a reason for the delay.

During the press conference, former DEQ Director Dan Wyant announced four of 37 water samples from 13 Flint schools exceeded the 15 ppb lead standard. Eisenhower Elementary School had samples of 16 ppb and 28 ppb, while Freeman had a sample that showed 101 parts per billion, Wyant said in October. A third school, Brownell/Holmes STEM Academy, also tested above 15 ppb.

Emails between Henry and Valacak showed increasing frustration as they claimed the state was putting politics over the people affected by the crisis.

"I am extremely disappointed with the response (or lack thereof) we have received from the state," Valacak wrote in an Oct. 7 email to Dr. Eden Wells, the chief medical executive of the state Department of Health and Human Services. "It is unconscionable to me that you appear to be sitting on results putting the people in Flint under continued stress and risk."

The email was the last in a three-day exchange between the two health officials over the status of lead testing results from the DEQ. During the conversation, Wells said she would inform the county immediately once any DEQ testing data was confirmed.

Wells didn't respond in email to Valacak's claims of a delay. Valacak, in a Thursday, Feb. 11, interview with The Flint Journal, said Wells called him and said the information wouldn't be released until after a press conference.

A spokeswoman for MDHHS declined to directly address Valacak's claims.

"Dr. Wells and MDHHS have been and remain dedicated to our response efforts to ensure the health and safety of Flint residents," said MDHHS spokeswoman Jennifer Eisner. "Protecting public health is our number one priority and mission."

Eisner forwarded all questions on testing to the DEQ.

DEQ spokeswoman Mel Brown could not be reached for comment but said Wednesday that her agency still regularly works with other organizations on the city's water crisis and strives to have positive relationships.

"The state DEQ is committed to having a good working relationship with the county and all partners at the local, state and federal level who are collaborating to ensure safe drinking water for the residents of Flint," Brown said.

Snyder's spokespeople denied they ordered the DEQ to delay releasing any information, saying the start of testing and the press conference were six days apart.

"On Friday, Oct. 2, the day after learning about elevated lead levels in the city, Snyder responded aggressively with an action plan that included testing the water in the schools and distributing filters," Snyder's office said in a statement released on his Facebook page.

"The state verified the data given the inaccuracies of sampling that had been problematic. As soon as the water samples were tested and the results verified, Snyder announced the results at a press conference in Flint on Oct. 8, where he also announced the state would help reconnect the city to water from Detroit."

Valacak said the county health department had obtained the samples for testing and they were picked up from his office by DEQ officials on Friday, Oct. 2. He said DEQ staff told him they would work through the weekend on the tests and promised a "24-hour turnaround."

"Initially we were told we would have results Monday or Tuesday morning by the latest now we are getting a run around about when results will be available," Valacak wrote in an Oct. 6 email to Wells.

Ultimately, the county received an automated email from the DEQ minutes before the Oct. 8 press conference was scheduled to begin notifying the county that the testing results were available.

"We needed as quick of response they could have given us," Valacak told The Flint Journal, adding his agency turned to private companies to test samples they collected in the jail and other county buildings.

However, county health officials said that wasn't the only time they experienced a delay in receiving results. Health officials claim they had similar troubles as further testing was conducted at Freeman Elementary during the last week of October.

Henry emailed the DEQ's Laboratory Director George Krisztian on Nov. 3 and requested all lead testing results for water at Freeman Elementary. He added that his request should be treated as a FOIA request.

Krisztian declined the request, saying the samples collected from the school on Oct. 24 presented an "incomplete picture of the plumbing system" and that samples collected on Oct. 31 wouldn't be ready until Nov. 4, according to the emails.

"I am hoping to either have a conference call or a meeting in Flint with all the partners to review the results and discuss how we will present the information to the public," Krisztian wrote.

On Nov. 6, Henry again emailed Valacak, claiming he had talked with Krisztian and that Krisztian told him he had been instructed to withhold the information until the FOIA deadline of Dec. 2.

"MDEQ reminds me of a stubborn 2yr old child," Henry wrote. "Instead of doing what is right, they'll willfully take another spanking just to be defiant."

The district had been under a self-imposed do-not-drink order for its water since late September.

"No child was (at) additional risk during the testing period, as the district had issued advisories telling students and staff not to drink water in the schools on Sept. 25," Snyder's Press Secretary Dave Murray said. "We applaud the district for being proactive."

Valacak said health department staff, while awaiting the results, went into the school and turned off faucets and covered them in plastic. Prior to that, Valacak said small signs placed near water fountains warned students not to drink from them.

Flint Community Schools released the results Nov. 9 in a press release after being informed of them by the DEQ.

"The Michigan Department of Environmental Quality informed Flint Community Schools that of 31 samples taken at the school on Oct. 24, samples from nine fixtures indicated water with lead exceeding 15 parts per billion, the threshold considered safe by the federal government," the district wrote in its press release. "The MDEQ informed FCS that the high lead levels were not detected in plumbing, but only in nine faucets and heads of drinking fountains."

School officials could not be reached for comment.

The city is in the national spotlight after elevated blood lead levels were discovered in some Flint children after the city changed its water source from Lake Huron water purchased from the Detroit water system to the Flint River in April 2014, a decision made while the city was run by a state-appointed emergency manager.

State regulators never required that the river water be treated to make it less corrosive, causing lead from plumbing and pipes to leach into the water supply.

Though the city reconnected to the Detroit water system in October, local and state officials have warned pregnant women and young children against using the water unless it has been tested because lead levels continue to exceed what can be handled by a filter.

Michigan would privatize mental health funding, services under Snyder's proposed budget

Crain's Detroit Business – February 11, 2016, By Jay Greene

Gov. Rick Snyder's \$54.9 billion fiscal 2017 budget calls for privatizing the \$2.4 billion public mental health system by turning over state funding to Medicaid HMOs.

In what is called "boilerplate" language at the end of Snyder's 408-page executive budget bill, Section 298 calls for carving in behavioral health benefits to the health plans by the end of fiscal 2017, which ends Sept. 30, 2017.

While the budget language does not include any savings, the **Michigan Association of Health Plans**, which has been lobbying for the changes, has suggested the switch could save the state millions of dollars.

Officials with the **Michigan Association of Community Mental Health Boards**, which is opposed to the plan, have called for an all-out lobbying effort targeted at key policymakers and state legislators, who will be holding hearings on the budget request over the next few months.

Snyder's budget proposal goes to the House and Senate appropriations committees. The House appropriations committee, chaired by Al Pscholka, is to hold its first hearing Feb. 29. The Senate appropriations committee, chaired by Dave Hildenbrand, had not scheduled its first meeting.

"We knew talks have been going on for months" to move state funds to Medicaid HMOs, said Robert Sheehan, CEO of the community mental health board association.

"We thought there would be real talk about integration and how to serve patients better. This doesn't move state policy along, control costs or help clients. The overhead for private plans is two times more than public plans."

Crain's has requested an interview with Snyder's office .

Rick Murdock, executive director of the HMO association, said Snyder's proposed budget is just the beginning of a dialogue with the state, mental health organizations and advocacy groups that will transpire over the next 18 months.

"The approach is prudent in that it does not make a change at all in FY 17," Murdock said. "We look forward to working and collaborating with all interested parties and the (the state) on this issue."

In a previous *Crain's* story, Murdock said the trend of health plans managing all or parts of the medical, behavioral health, substance abuse and developmentally disabled populations is happening in other states. They include Illinois, California, Florida, New Mexico, South Carolina, Washington, Wisconsin and Texas.

Sources tell *Crain's* the health plans have suggested to Snyder and state legislators that allowing them to manage medical and behavioral health in an integrated fashion could cut costs by \$200 million from 2017 to 2019.

Sheehan said the promises of savings to the state may be a mirage. His initial analysis shows administrative costs for the "prepaid inpatient health plans," or PIHPs, commonly called mental health authorities, average about 6 percent of costs, compared with the 12 percent administrative costs of HMOs.

Murdock has suggested to *Crain's* that savings can come from eliminating duplicate layers of administration and bureaucracy, and improving efficiency.

"I don't think we are served by getting into a debate on percent of administrative costs as they are defined differently," Murdock said in an email to *Crain's*. "I would agree with Bob (Sheehan) that savings may not be realized due to unmet needs and other circumstances that need to be addressed — but hopefully we are all in agreement that future improvements that will lead to treating the whole person under a single accountable system will make sense."

But Willie Brooks, CEO of **Oakland County Community Mental Health Authority**, said the needs of the 300,000 Michigan residents served by the public mental health system should be considered ahead of any potential cost savings to the state.

"Who stands to benefit from this change: the state, the Medicaid health plans or both?" Brooks told *Crain's* in a statement. "We certainly know it is not the more than 300,000 Michigan residents who currently receive public mental health services for their developmental disability, mental illness, substance use disorder, or serious emotional disturbance."

Brooks said the promise of Medicaid health plans to save the state \$200 million should not be the only consideration.

"It is the state's responsibility to protect the life-changing services that they receive through the community mental health system; this change actually puts them in jeopardy of diminished services," Brooks said.

Sheehan said many advocacy groups are being enlisted to help lobbying efforts, including the **National Alliance for Mental Illness**, **The ARC**, the **Association for Children's Mental Health** and the **Michigan Protection & Advocacy Services**.

Under the state's current mental health payment system, the **Department of Health and Human Services** makes monthly per person Medicaid payments to prepaid inpatient health plans in 10 regions. Southeast Michigan has three regional PIHPs, which are located in Wayne, Oakland and Macomb counties.

The PIHPs, in turn, subcontract with a variety of provider organizations and community mental health agencies to deliver services that include autism, developmental, substance abuse, behavioral health and serious mental disorders. The 46 community mental health agencies, which serve 83 counties, also receive general fund dollars for non-Medicaid covered services.

Sen. Jim Marleau, R-Lake Orion, who is on the appropriations committee, said he will ask if such a funding reorganization would lead to higher quality services for patients.

"Michigan's Medicaid insurance companies proposed integration models for mental health and substance use treatment services in order to qualify for a contract last year," Marleau said in an email to *Crain's*. "But I have seen few details."

Marleau said Healthy Michigan Medicaid has significantly increased the overlap in patients receiving both medical and behavioral health services.

"Integrating mental and physical health care has shown to provide tremendous value but I'm not sure if this proposal is the best way," he said.

Under Section 298 in the budget, Snyder proposes that HHS "transfer the service funds appropriated ... currently provided to PIHPs through the Medicaid mental health services, Medicaid substance use disorder services, Healthy Michigan plan – behavioral health and autism services lines to the health plan services line by September 30, 2017."

Snyder's budget language calls for HHS to amend "contracts to the Medicaid health plans to include responsibility for covering the full array of specialty services and supports for eligible Medicaid beneficiaries with a serious mental illness, developmental disability, serious emotional disturbance, or substance use disorder upon completion of a plan to integrate these specialty services and supports in to the comprehensive health plan contract."

Moreover, the budget proposal also calls to begin talks with various mental health advocates to develop an integration plan to merge medical and behavioral health services. HHS would then contract with an "administrative service organization to provide oversight of the Medicaid health plans and the community mental health service providers and ensure continuity of care for the served populations." Medicaid HMOs would be required to contract with the existing community mental health service providers for the provision of specialty services and supports.

Tom Watkins, CEO of the **Detroit Wayne Mental Health Authority**, said he has been hearing from many family members and advocates who are very concerned about the state privatizing the public mental health system.

"They are cautioning the Governor against moving toward what they see as a profitizing the system of care for their family members," Watkins said in an email to *Crain's*.

Watkins said the Detroit Wayne authority has cut more than \$30 million from its overhead structure the past several years that has generated greater services to its patients.

"We expect we will have a prominent seat at the table with the administration and the Legislature as they think this move through," he said. "There are ways, which we have demonstrated to improve service delivery that don't place profits over people."

For more details, here are the links to Snyder's 2017 general budget document and executive recommendation.

Amid politics, pediatrician stands out as trusted advocate in Flint water crisis

AAP New Publications – February 12, 2016, By Trisha Koriath

As blame, debate and federal investigations continue into the water crisis in Flint, Mich., Mona Hanna-Attisha, M.D., M.P.H., FAAP, remains focused on the care of the city's children.

The pediatrician who proved Flint's water system was contaminated with lead was named director of the Pediatric Public Health Initiative (PPHI) at Michigan State University (MSU) and Hurley Children's Hospital. The initiative will provide comprehensive services for 9,000 Flint children under age 6 with probable lead exposure.

A study by Dr. Hanna-Attisha's team, published in the February *American Journal of Public Health* (<http://bit.ly/1PKk9VJ>), provided evidence to refute doubts that Flint's water supply was raising children's blood lead levels. Since Dr. Hanna-Attisha went public with the data last September, she has become a familiar face in the news. She refused to stand down even as public officials questioned her findings.

At the PPHI, she will see patients, gather data, track their health and ensure they receive services in a medical home. As the PPHI follows the children over the next two decades, it also will serve as a model public health program.

The collaborative brings together experts from pediatrics, child development, psychology, epidemiology, nutrition, toxicology, geography and education and includes the Genesee County Health Department, Michigan Department of Health and Human Services and the MSU Extension.

The consequences of lead exposure are multigenerational, and in some cases the children's blood lead levels may have peaked before they were screened, said Dr. Hanna-Attisha, director of pediatric residency at Hurley and assistant professor of pediatrics at the MSU College of Human Medicine. Because of lead's short half-life, every intervention will be made available to every child.

"We have this moral, professional obligation to these children. They did nothing wrong," she said. "If we don't throw every single resource at these kids now, we'll see those long-term consequences."

Continued advocacy

In late January, Gov. Rick Snyder signed off on \$28 million in supplemental funding from the state to support interventions in health, nutrition, education and literacy.

"We know the benefits of early education, early literacy, universal preschool," said Dr. Hanna-Attisha. "We're advocating for improved nutrition access, expansion of WIC (the Special Supplemental Nutrition Program for *Women, Infants, and Children*), behavioral health services, a lot of these evidence-based interventions that we know will help."

The AAP Michigan Chapter was instrumental in gathering information from its 1,300 members and sending alerts asking them to contact their legislators to support the supplemental bill. The chapter also coordinated messages with medical societies and early childhood agencies, said chapter Executive Director Denise Sloan.

A registered lobbyist, Sloan has worked closely with Dr. Hanna-Attisha, a member of the chapter's board of directors, and Lawrence Reynolds, M.D., FAAP, past president of the board. Both pediatricians were appointed by Gov. Snyder to a three-year term on the 17-member Flint Water Interagency Coordinating Committee.

Nearly two years after Flint starting getting its water from the Flint River, which corroded pipes and caused lead to leach into the drinking water, nobody knows exactly when the problem will be fixed.

Medical home a must

Flint is fortunate in that the medical community was already working to meet the needs of the 41% of residents who live below the poverty level. The Hurley Children's Center opening this spring in the heart of Flint across from MSU will serve as a medical home and bolster those efforts.

One focus will be on nutrition, which can help counter lead's effects. The clinic is located above a farmer's market that accepts Supplemental Nutrition Assistance Program benefits. Weekly cooking demonstrations are offered in the market to teach families how to prepare meals that are high in iron, calcium and vitamin C. The city does not have grocery stores, so locating the clinic above a farmer's market was purposeful. "We give out nutrition prescriptions," said Dr. Hanna-Attisha.

The new clinic also is a pilot site for the Michigan Caries Prevention Program, and all Flint children are eligible for universal dental care.

The clinic also will have space for 21 MSU medical residents. Residents and medical students participating in the MSU teaching clinic so far have learned a great deal from the crisis. AAP Resident Member Allison M. Champney Schnepf, M.D., was co-author of the *American Journal of Public Health* study. Dr. Hanna-Attisha also has a medical student who in his first two days on rotation met U.S. senators, the mayor, Environmental Protection Agency Administrator Gina McCarthy and attended multiple press conferences.

"If they (residents and medical students) can work in this environment and espouse these values, then they will go on and practice in perpetuity espousing the same," she said.

Public trust

Dr. Hanna-Attisha represents credibility and trust in a city where residents are understandably suspicious. When the government began handing out free water filters, the public was wary. Only after pediatricians made public service announcements to let the community know they should use the filters did people listen.

Dr. Hanna-Attisha said she remains "apolitical," working with everyone regardless of their position. Sloan admits having to push aside her feelings about the crisis. "I don't want to do finger-pointing. I just want to get services to kids and get our members what they need to try to mitigate some of the impacts of this poisoned population."

She urges chapters to be proactive and use the Academy's emergency preparedness recommendations and resources to develop their own plans (see Resources).

Despite the patient care, research, national press interviews and meetings with federal officials, Dr. Hanna-Attisha remains grounded by her family, especially her two daughters who occasionally remind her to put down the laptop and spend a little time with them. She and her husband, Elliott Attisha, D.O., FAAP, don't expect life to continue at such a frenetic pace, but they're aware there's still a lot to be done.

"It is our job to be the voice of children, especially in underserved communities where they are essentially voiceless," said Dr. Hanna-Attisha. "People are congratulating me and calling me a hero, but this is our job. This is what we signed up to do as pediatricians."

Mount Clemens students collect water for people of Flint

Macomb Daily News – February 11, 2016

Students and staff members of Seminole Academy in the Mount Clemens Community Schools district recently collected 224 cases and 94 gallon jugs of water for the water crisis in Flint. The materials were collected by the Michigan Department of Health and Human Services to be distributed in the Flint community.

Two classes at the school each won a pizza party for the efforts in donating the water.

Here's Flint's best chance for a lawsuit

The Washington Post – February 11, 2016, By Stuart H. Smith

We know thousands were exposed to poisoned water. Now it's on the lawyers to prove that citizens suffered because government failed.

News keeps getting worse in Flint, Mich., where bureaucratic bungling exposed thousands of residents to highly toxic lead pollution in their tap water. With more than 150 parts per billion — above what common filters can extract — children in particular are at a heightened risk of developing irreversible conditions including lower IQs and behavioral problems. It's a crisis of government negligence.

So how can people who live there hold officials to account? Sue.

We know people in Flint were poisoned. It's a lawyer's job to prove that they suffered because officials failed in their obligations, and class-action lawsuits are almost certainly the way to go. Two such suits, both focusing on the actions of the Department of Health and Human Services, have been filed against the state of Michigan, its agencies and the governor. The question is: Will they succeed?

As an environmental lawyer with years of experience suing oil companies for polluting working-class communities in the Deep South, I've watched Flint with a sense of déjà vu. What I've learned is that in these cases, bad actors, including government, will continually obfuscate until citizens and their lawyers or doctors are able to gather the evidence needed to prove their clients have been harmed. Just look at the misinformation that was put out to the public during the BP oil spill in the Gulf of Mexico about the flow rate of the leak and the safety of seafood harvested from surrounding waters.

Too often, a courtroom is not only the best but the only place where victims can win fair compensation. And their vehicle is a civil suit where the standard, unlike a criminal trial, isn't "beyond a reasonable doubt." Instead, lawyers must prove that a "preponderance," or majority, of the evidence demonstrates liability. If defendants are held responsible, they're required to compensate their victims financially.

What makes things more complicated in Flint is that unlike an action against an individual or corporation, allegations of mismanagement are directed at state, local and perhaps federal officials. And because governments write the legislation, they, unlike private entities, can shield themselves from aggrieved citizens seeking compensation. Even when citizens *can* sue the state, the bar they must clear is frequently higher.

In Michigan, residents wishing to recover from a public agency are required to prove not merely negligence, as they would in a typical case, but *gross negligence*, defined as “conduct so reckless as to demonstrate a substantial lack of concern for whether an injury results.” The question is whether officials in Flint, the governor’s office, the Michigan Department of Environmental Quality or the Michigan Department of Health and Human Services were grossly negligent, according to that standard.

It shouldn’t be too hard to get over this hurdle. Already, it’s clear that state officials knew about the crisis and took action to protect themselves, if not the people they served: providing state government workers in Flint with bottled water long before publicly acknowledging to everyday citizens that their water was tainted. The state sent 1,500 water filters to Flint in August, and Gov. Rick Snyder’s office issued a response plan in October — but at that point hadn’t warned residents to stop drinking the city’s water.

Still, cases like these are hard to win because it can be difficult to demonstrate a direct causal relationship between the defendant’s reckless disregard and the plaintiff’s injury. Besides passion, knowing the law and how to fight in court, the lawyers will need deep pockets, a team of recognized experts, and a solid understanding of chemistry and toxicology.

In the environmental cases I’ve litigated, environmental and medical testing, and providing the necessary experts, have cost millions of dollars. In the biggest cases, I have had to use large lines of credit and partner with other law firms. Similarly, this case is probably much larger than any small local law practice can handle. In what is known in the legal industry as a mass tort, as is the case here, lawyers from experienced firms will band together to share in the risks and the potential rewards. Given the circumstances, it’s the best course of action, and in Michigan the criteria are similar to those used in federal courts and in many states.

If the requirements for commonality (the plaintiffs’ claims against the defendants are common), numerosity (it’s impractical for every claimant to sue individually) and the adequacy of the class representatives (the named plaintiffs’ claims are similar to those of the class) are met, certain common questions of law and fact can be certified for one trial. Were the defendants grossly negligent? Was a contract breached? Were consumer protection laws violated? Was the water dangerous? Should the source be replaced? And by what percentage are the different defendants liable for the damages?

If liability is found in the class-action suits, individual damage claims probably will have to be litigated on their own merits, if there is no settlement, because different class members will have different categories of injury.

But first things first: Health is paramount, so anyone in Flint who has been drinking or bathing in the city’s water should see a doctor immediately. But another reason to seek treatment sooner rather than later is to get blood tests and any other relevant medical exams as quickly as possible, to document health problems caused by consuming Flint’s dirty water. Proof of rashes, hair loss or other maladies could become powerful courtroom evidence. I’ve found that clear-cut medical evidence is the best way for plaintiffs to prove they’ve been harmed by pollution, and to withstand challenges from aggressive defense lawyers.

And every cost that results from lead exposure must be accounted for, from medical expenses to the loss of future earnings for children who face diminished cognitive capabilities.

If my experience is a guide, the state will hire the best lawyers and experts money can buy to argue that Flint residents experienced insufficient exposure to lead and that their maladies come from another source or preexisting condition. Unfortunately, it is especially difficult to prove that a brain injury has caused cognitive dysfunction when no prior brain measurements exist. Almost certainly, everyone exposed to Flint’s poisoned water will need a lifetime of medical monitoring to watch for latent diseases that can take years to manifest. If and when that happens, another lawsuit might be in order. That is why potential plaintiffs should be cautious about any hastily offered settlement, which may require a waiver of future claims.

I hope that everyone in Flint has saved their water bills and other receipts as evidence of both the span of time during which they were consuming and paying for city water, and to demonstrate that the water crisis imposed a financial burden — including medical and pharmaceutical costs as well as the expense of buying large quantities of bottled water. This could become important later in establishing the length of exposure and damages to the person and the pocketbook.

Flint's tap water may be orange and murky, but the way forward is clear: Government, like big business, works for the people only when the cost of doing wrong is shown to be greater than the cost of doing right. And for the people of Flint, the place to teach that lesson is in court.

Snyder pitches in at Flint food bank

Detroit Free Press – February 11, 2016, By Robert Allen

Visit is one of several ways the governor has tried to engage with the city as many have called to have him kicked out of office or worse..

FLINT -- Michigan Gov. Rick Snyder sorted cans at a food bank for about a half hour Thursday morning in Flint where residents worry their children may have permanent brain damage from lead-tainted tap water.

Officials hope the canned fruits and vegetables will lessen the effects of the poison on affected children's bodies. Snyder's visit is one of several ways he's tried to engage with residents as many have called to have him kicked out of office or worse.

"It's very important for children to get access to, particularly, things high in iron, higher in calcium, higher in vitamin C, because it can help bind with the lead to mitigate some of the negative impacts," Snyder said during the visit.

The Food Bank of Eastern Michigan last year helped some 67,000 of the city's estimated 99,000 residents, said its president, William Kerr. Later this month, the food bank will offer mobile pantries using more than \$1 million in funding from the Michigan Department of Health and Human Services, Kerr said.

[DETROIT FREE PRESS](#)

[Doctor says parents can help Flint kids exposed to lead](#)

Snyder and Kerr took a tour of the food bank -- a regional organization that served as many as 400,000 Michiganders -- before volunteering. Snyder spokeswoman Anna Heaton said output at the center could increase by 29 percent with help from part of \$15 million the governor requested from the state budget for Flint.

"We don't think every child in Flint has been affected," she said. "But we're acting as if every child were. And if they get more nutrition even if they weren't affected, that's a good thing."

The city's water supply was contaminated with lead after the source was temporarily changed to the Flint River in spring 2014 and proper chemicals to prevent corrosion weren't added. Nearly two years later, hundreds of homes continue to have water with lead levels above the federal government's action level of 15 parts per billion.

Snyder on Wednesday's visit met with Marseille Allen, the Flint resident and Department of Corrections employee who's raised more than \$50,000 through gofundme.com to help fellow residents, mostly with cases of bottled water.

[DETROIT FREE PRESS](#)

[Flint fuels finger pointing, political maneuvering](#)

She said the visit helps show that the governor hears people's concerns.

"I think he understands what the issues are, it's just a matter of fixing it," Allen said.

She added that Flint residents want all the tainted pipes replaced.

"You cannot get the trust of the people unless you replace those pipes," she said. "People I know are so emotionally damaged, they're not going to trust" the government even if the pipes are replaced, she said.

Lead in Michigan: MSU Extension launches website full of educational resources on lead

Michigan State University Extension – February 11, 2016

EAST LANSING, Michigan – The national spotlight is on Flint as it deals with wide-ranging issues related to lead in the water supply, but lead exposure is not just a Flint problem. In fact, hundreds of thousands of Michigan residents, including many young children, live in areas with elevated lead levels.

Detroit, Grand Rapids, Muskegon, Kalamazoo, Jackson, Holland, Albion, Adrian, Hasting, Three Rivers, Bay City, Ludington, Manistee Three Rivers, and the Upper Peninsula have all had pockets where children have elevated lead levels, according to Michigan Department of Health and Human Services data. This exposure is not from the water supply as in Flint, but instead through lead-based paints and lead residue in soil.

[Michigan State University Extension](#) is committed to bringing nutrition and early childhood education with an increased emphasis on combatting the effects of lead exposure to communities in need. MSU Extension, working with partners including the Pediatric Public Health Initiative in Flint, is working to create new resources and modify existing resources to detail how people can use nutrition to fight the effects of lead, and what resources are available in at-risk communities.

MSU Extension has launched the Fight Lead Exposure website (<http://msue.msu.edu/lead>) as an informational resource hub for people to learn about lead including the risks and what to do if they concerned themselves, a young child or a loved one has been exposed to lead.

"Our responsibility is to be as responsive as possible to meet the needs of the communities we serve, and MSU Extension is working to get as much trusted information as possible to communities in need," said Jeff Dwyer, interim director of MSU Extension.

Included are upcoming educational opportunities, helpful news articles ranging from nutrition to soil contamination to how pets could be affected. Also included on the resource page is the Fight Lead with Nutrition flyer, which details how foods rich in nutrients including calcium, iron and vitamin C can help mitigate the effects of lead. It also lists a series of Genesee County and statewide resources for people to get help.

“We are proud of our how our educators are working to meet this pressing need,” Dwyer said. “All our educators, whether they work in the fields of nutrition, early childhood education, agriculture or community sustainability are working hard to figure out what they can do to help the people of Flint and elsewhere in Michigan dealing with the insidious issue of lead.”

For more information, please visit <http://msue.msu.edu/lead>.

On verge of Flint Legionnaires’ alert, state stayed mum

The Detroit News – February 12, 2016, By C Livengood

At least six Environmental Protection Agency officials discussed in late March Genesee County’s Legionnaires’ disease outbreak and a suspected link to Flint’s change in water sources — and were told the state would alert the public.

No pronouncements about the outbreak were made then. Two months later, a Michigan health official’s email to the Centers for Disease Control and Prevention declared “the outbreak is over.” The disease would kill four more people in the summer and fall and would not be brought to the public’s attention until the next year.

When the public was informed, the words came from Gov. Rick Snyder during a Jan. 13 press conference. Snyder maintained he had heard about the Legionnaires’ outbreak two days earlier.

Thomas Poy, the ground and drinking water branch chief of EPA Region 5, told those on the March phone call that “the state is currently figuring out a communication-with-the-public plan,” according to notes from Jennifer Crooks, the EPA’s Michigan drinking water program manager.

A trove of more than 24,000 pages of Flint-related documents among local, state and federal officials released by Snyder’s administration reveals EPA Midwest water experts held the March 26 conference call to discuss the Flint-area Legionnaires’ disease outbreak. Among those contributing was Region 5 water expert Miguel Del Toral, who at the time expressed concerns about the lack of corrosion controls and the likely risk of lead contamination in Flint’s drinking water.

DETROIT NEWS

Regulators dismissed dissenters on Flint crisis

Del Toral discussed the possibility that “extensive flushing” of Flint’s stagnant water by residents may have caused bacteria-fighting chlorine residual in the pipes to be washed away, leaving the pipes susceptible to Legionella bacterial growth, according to notes from the conference call.

Darren Lytle, an expert in Legionella from the EPA’s Cincinnati office, told his colleagues that his previous research showed that changes in water chemistry can cause disruption and “destabilize” water piping systems. Lytle “thought the incidence of Legionella must be fairly extensive for the (Genesee County Health Department) to notice and study,” according to the conference call notes.

Lytle offered to come to Flint and study the origins of the pneumonia-causing bacteria, records show.

But state and county officials appear to have never followed through with the offer for help, an EPA official said. As it did in Flint’s lead contamination, the agency stayed publicly silent about the threats to public health in Genesee County while state and local officials debated how to approach the problem, records show.

DETROIT NEWS

DEQ official: Staffers earn raises for Flint work

“There wasn’t any follow-up with them asking us to do anything,” EPA spokeswoman Monica Lee said Thursday. “There wasn’t any specific ask there, we were just kind of put on alert that they were looking at Legionnaires’ disease.”

Numbers alarmed EPA

Notes from the March 26 conference call suggest EPA officials had been briefed by state officials about what they were planning to do. Genesee County contacted the EPA about the outbreak in February 2015, and shared data on cases that had occurred by then. According to Lee, the agency was so alarmed by the numbers they immediately contacted the CDC to alert them.

Disclosure of the outbreak fell to state and local health officials as well as the CDC, Lee said.

“CDC has the lead on this. It’s not EPA at all,” Lee said.

CDC spokeswoman Kristen Nordlund on Thursday said the agency offered its epidemiologic expertise and laboratory support, but it required a direct state request.

“Based on the available information, CDC felt that a comprehensive investigation was warranted and offered to further assist Michigan,” Nordlund said in an email. “In this case, Michigan felt that they had the skills and resources needed to perform the investigation themselves.”

EPA’s Crooks emailed those notes on March 30 to Michigan Department of Environmental Quality water regulators Stephen Busch and Mike Prysby, state employees who oversaw Flint’s water. Busch is currently suspended.

“(EPA’s) Tom Poy said that we are laying a foundation now with resources for when the state goes public with the issue of Legionella,” according to the notes.

The Legionnaires’ disease outbreak that infected 87 Flint-area residents and caused nine deaths from April 2014 through November was not made public until Jan. 13, when Snyder announced them in a hastily called press conference in Detroit. Snyder had learned of the outbreak two days before, an aide said.

In January, state health officials finally requested support from CDC’s Legionella experts 11 months after it was offered, Nordlund said.

State unsure river to blame

Emails from federal, state and local government agencies emerging in the wake of the Flint water contamination crisis show a series of events that transpired behind the scenes last year as officials scrambled to understand the source of the illness before informing Flint-area residents of the public health threat. To this day, state health officials are still unsure whether the Flint River water is to blame for the outbreak.

DETROIT NEWS

Snyder aides considered Flint water filters in March

The records show a slow and sometimes indifferent response by state and federal officials, starting in October 2014 when the Legionnaires’ spike was noticed by Genesee County health department officials.

Liane Shekter Smith, who was the DEQ official in charge of Flint’s April 2014 switch to Flint River water, made a phone call to Susan Bohm, an epidemiologist at the Michigan Department of Health and Human Services.

Bohm sent officials at DHHS who deal with communicable diseases an email about the phone call labeled “Genesee County Legionnaires’ Disease Cluster.”

The email shows Shekter Smith, who was fired last week for her role in Flint's water crisis, sought to steer health department officials away from concluding that the spike in Legionnaires' disease may have been related to Flint switching to river water six months earlier.

"She was concerned that we were going to be making some announcement soon about the water being the source of infection, so I told her the Flint water was at this point just a hypothesis," Bohm wrote. "... What she did share with me was interesting — that there have been numerous complaints about the Flint water, that the Governor's Office had been involved, and that any announcement by public health about the quality of the water would certainly inflame the situation."

Snyder's office has said its involvement in Flint's water in October 2014 was limited to responding to complaints from citizens about the smell, taste and color of the water. The governor's administration also was inquiring about boil water advisories Flint issued in August and September of that year after E. coli and total coliform bacteria had infiltrated the water supply.

Agency tensions building

By January 2015, Flint's water problems were bubbling up after bacteria-killing chlorine caused high levels of the byproduct total trihalomethanes — known as TTHM — and tensions were building between government agencies, records show.

"Conclusions that Legionella is coming from the public water system without the presentation of any substantiating evidence from your epidemiologic investigation appears premature and prejudice toward that end."

DEQ water regulator Stephen Busch to Jim Henry, Genesee County environmental health supervisor

On Jan. 26, Jim Henry, a Genesee County environmental health supervisor, sent county health officials an email about his inquiry to multiple government agencies in his probe of the Legionnaires' outbreak. At the DEQ, Henry said he ran into a road block.

"Mike Prysby and Steve Busch declined to meet with our office," Henry wrote.

Shekter Smith, who supervised Busch and Prysby at the DEQ, later said in a March 12 email that Busch denied that his office refused to meet with Henry.

The next day, Busch pushed back in an email to Henry about his focus on the Flint River as the source of the outbreak.

"Conclusions that Legionella is coming from the public water system without the presentation of any substantiating evidence from your epidemiologic investigation appears premature and prejudice toward that end," Busch wrote to Henry.

On April 8, DEQ's Shekter Smith discussed gathering data to determine the source of Legionella with EPA's Crooks. Crooks was involved in the March 26 call with other EPA officials about the Legionnaires' disease outbreak.

According to Crooks' notes of the meeting with Shekter Smith, DEQ officials were "having trouble keeping" the county health department focused on investigating the source of the Legionella bacteria.

"Seems that (the county health department) is continually distracted by side issues going on with the Flint distribution system, such as the lead service line issues," Crooks wrote in the April 8 memo, six months before state officials admitted Flint had lead leaching from the water service lines.

'The outbreak is over'

In the following months, state health officials began battling Genesee County's health department.

On June 4, DHHS communicable disease division director Jim Collins sent his summary report on 45 cases of Legionnaires' disease from June 6, 2014, through March 9, 2015, records show.

"The outbreak is over," Collins' report declared. "The last reported case occurred in March 2015. The lack of clinical Legionella isolates precludes our ability to link cases to an environmental source."

Henry responded with skepticism that the outbreak was over, noting there had been two confirmed Legionella cases earlier that week, according to county records obtained by The News through a public records request.

"The executive summary regarding the Legionella outbreak is appreciated, but I don't know if there is consensus that it is over," Henry wrote in an email response. "... There has been a lot of finger pointing and miscommunications, which continues even in the email below from Jim Collins, today. I think us reaching out to CDC and EPA was appropriate. We were not gaining much ground with the state agencies and now the warmer weather is upon us."

CDC officials had said they needed a request for assistance from the state, not the county.

"Relative to communications around the investigation, I believe that CDC is in agreement that their involvement really should be at the request of the state rather than the local health department," Collins wrote in a June 8 email to Henry and other Genesee County officials.

Lag, then issue resurfaces

From there, the records trail goes cold until Nov. 30, when county officials sent EPA's Lytle a draft press release that would have alerted the public to the Legionnaires' disease outbreak and a second wave that ended earlier that month. Lytle forwarded the email to members of EPA's Flint water task force on the morning of Dec. 1.

"I have been trying to get to the bottom of reports of increases in reported cases of Legionnaires' Disease in Genesee County and finally reached the correct people," Lytle wrote. "They shared some data that is very concerning and although they can't pinpoint the exact source of Legionella, drinking water can't be ruled out."

Lytle's email was forwarded along to other government agencies, arriving in the inbox of a CDC official in Atlanta that afternoon. Laurel Garrison, who tracks Legionella outbreaks for the CDC, became alarmed by a statement that the CDC had been formally engaged in the issue, according to her email to Collins and another state health official.

"As you're aware, we haven't received a formal report from MDHHS and haven't received a request to review anything in any formal or informal way since June," Garrison wrote. "Of course, we are ready to assist if there is a need, but I'm concerned that this statement is misrepresenting CDC's current involvement."

Genesee County never issued the news release and it's unclear why. Henry did not return a message seeking comment.

Keith Creagh, the new DEQ director, said Thursday the months of nondisclosure of the Legionnaires' disease outbreak by his agency and others shows the need for new public reporting requirements.

"There is a reason to be thoughtful and methodical in a crisis, but I think we have an obligation to let people know," Creagh told The News.

Boil water advisory adds to confusion over how to make Flint tap water safe to drink

Michigan Radio – February 11, 2016, By Lindsey Smith

If you live in Flint, it can be really hard to figure out what you should and should not do with your tap water. The messages from officials, scientists and non-profit groups sometimes conflict with one another and they've changed over time.

This week, an unfortunate turn of events has made an already confusing situation even worse.

Michael Hood started going door-to-door in Flint last month. The wilderness guide from the Ann Arbor area was part of a newly formed group called Crossing Water, and they wanted to see what they could do to help people in Flint.

"Most folks have heard that the water is not safe to drink, but not everybody," Hood said.

It might seem crazy, Hood says, with the Internet and 24-hour cable news, that some people in Flint still don't know about potentially dangerous levels of lead in their drinking water. But, Hood points out, there are a lot of people who can't afford Internet or cable, who don't speak English, who cannot read.

"They've heard from word of mouth that the water is bad, so they're just boiling the water thinking that's going to be OK. There are also a lot of immigrants from South and Central America, and when the water is bad down there they know to boil the water because it's usually a bacterial issue or something in the water," he said.

But when you boil water that's got high levels of lead in it, the lead doesn't go away. It just gets worse, more concentrated, more dangerous to drink.

Hood was dumbfounded that no official agency seemed to be addressing this common misconception. So his group jumped into action, working with some billboard companies, TV and radio stations, to get the message out: Boiling your water will not remove lead.

But then, on Tuesday, there was a major water main break in Flint. That caused the water system to lose pressure. That means there was the potential for dangerous bacteria to get into the system. So the city put out a notice, warning people to boil their water.

"It really does send a contrary message, and that message has to get out there unfortunately, but it really has sent a confusing message to the public. So people are really scared. People are really confused and they don't know what to do," Hood said.

Public officials acknowledge it is a confusing time.

"People were concerned again, 'oh my gosh, is it safe to shower or bathe?' So you can imagine the confusion. I certainly can understand the confusion," said Dr. Eden Wells. She's the chief medical executive for the Michigan Department of Health and Human Services.

Until the boil water advisory is lifted, Wells says people in Flint should boil their tap water after it's gone through a certified lead filter. The state put out a list to help clear up the most commonly asked questions about the advisory.

Once the boil water advisory is lifted, people will need to replace the cartridges on their lead filters. A state health department spokesman says there are "plenty" of replacement filter cartridges available. Residents can get filters and cartridges for free at distribution centers across the city.

Wells says the good news is that preliminary tests show no sign of dangerous bacteria because of the water main break. But, Wells says, they have to wait for another round of tests that won't come back in until sometime Friday.

"I'm hoping that we're dealing with just this 48-hour period of that very confusing time for everybody," Wells said.

Even without the water main break, there's been a lot of confusion about lead in water in Flint.

While I visited homes with high lead in water tests last week, people said they weren't sure if they could shower or brush their teeth with unfiltered tap water. Others worried the filter they got didn't fit right.

James Todd's water has tested high for lead twice in the last month. One test came back more than 60 times higher than what the federal government considers acceptable.

"I was kind of shocked. I was scared, I guess, because we used the water and consumed it and never thought anything was wrong with it for over a year now," he said.

One official from Michigan's Department of Environmental Quality stopped by Todd's house last week. Todd says this DEQ official told him his water was safe to drink with the certified lead filter. But Todd showed me the instructions that came with the filter, which say it won't remove lead if levels are as high as his.

The U.S. EPA did tests that show the filters will work at these levels, but still, Todd's skeptical.

After the team of state officials left, Todd says he's more concerned.

"I read something about vacuuming your floors. That vacuuming your floors will actually cause lead dust now. Well, where's that coming from on my floors? How'd it get on my floors?"

Todd flips through some paperwork on his kitchen table that the state officials left.

"Maybe it was in here I read it," he says, pausing to read from a pamphlet about lead exposure.

"Oh yeah, here it is, it says 'use doormats, take your shoes off when indoors. Vacuuming carpets may pull more lead dust to the surface, so use a non-motorized sweeper to clean carpets,'" Todd reads from the pamphlet.

"I don't have non-motorized carpet cleaner. Maybe they'll have them at the fire department pretty soon too, you know?" Todd says, laughing a little, before continuing, "clean window sills and wipe play areas down with paper towels and soapy water.

"This is the paperwork from the guy who just left my house, just before you got here."

Todd owns his own painting business. He served in the Navy. He watches the news. He got the results from his first lead test after spotting a map of the city's latest test results on social media and searching for it. He's even had multiple visits from various officials and volunteers. He's no dummy. And still, he's confused about how to protect his family from lead in Flint.

Flint Officials Could Face Manslaughter Charges

Water Online – February 12, 2016, By Sara Jerome

A top state investigator says Flint officials could face manslaughter charges in the aftermath of the lead contamination scandal that has rocked the Michigan city.

Todd Flood, special counsel for the state attorney general's office, is leading a probe into how officials responded to the crisis. Critics say state and federal officials did little to protect residents after the city's toxic tap water was discovered.

"We're here to investigate what possible crimes there are, anything [from] involuntary manslaughter or death that may have happened to some young person or old person because of this poisoning, to misconduct in office," Flood said, per *The Washington Post*. "We take this very seriously."

Flood said manslaughter charges "could be on the table if government officials were grossly negligent in their handling of the city's water change and the aftermath. The maximum prison sentence is 15 years," the Associated Press reported.

"If I knew something bad was going on... and I just want to turn my blind eye, that could be a problem," Flood said.

In Flint, the enormity of the impact on public health remains impossible to determine. Researchers have predicted far-reaching consequences. Officials have already identified at least 200 children in Flint who have elevated blood-lead levels. And the area has also seen a spike in cases of Legionella bacteria.

"From June 2014 to March 2015, 45 cases of Legionella bacteria were confirmed in Genesee County, according to the state Health and Human Services Department Director Nick Lyon. Three of those were fatal," Michigan Live reported.

Chief Medical Executive for the Health and Human Services Department Eden Wells weighed in: "87 cases is a lot. That tells us that there is a source there that needs to be investigated."

Flint was thrust into the national news this year when the governor declared a state of emergency over a lead contamination crisis that is taking a toll on public health. Everything from lead to disinfectant byproducts have plagued the supply since the city switched from Detroit water and began drinking Flint River water two years ago.

Officials are still grappling with how to respond. The emergency is prompting Governor Rick Snyder "to propose another \$195 million in aid in his annual budget proposal, including \$25 million to potentially replace old lead and copper pipes. Snyder also plans to call for \$165 million in funding for infrastructure needs across Michigan in the 2016-17 budget," the Associated Press reported.

Subject: FW: FOIA Project Updates to General Managers

Hi Susan,

I just remembered that Linda asked me to loop you in on anything I found from OA. When I talked to John he was adamant that his team would not be doing any agency searches.

Please let me know if I can help in any way.

Thank you,
Jodi

Subject: RE: FOIA Project Updates to General Managers

Hi everyone --

I talked to John McQuaid earlier this afternoon. As Tiziana stated, the agencies should be doing their own searches. With the Legal Discovery OA is conducting outside of this FOIA request, they don't have the resources to conduct the agency searches as well.

Here's what I know they CAN provide though -

- OA can provide an eDiscovery mailbox and additional fileshare space to place identified mail/documents.

To accomplish this you should submit a remedy ticket with the details needed and then send the ticket number to John McQuaid (cc Joe Hyrman and myself) with 'FOIA-Flint' in the subject line and they will escalate the request.

- I also know that Greg Mears (DTMB Client Specialist) is putting together instructions on how to do effective searches in Outlook for Laurie Westfall's area. I can share this with the GMs when complete as well.

If your agencies are requesting additional assistance, please let me know. The reason requests are being funneled through me initially is so James can get an idea of the assistance needed and can have that discussion with OA and the Governor's Office to set priorities if needed.

Thanks,
Jodi

Subject: Re: FOIA Project Updates to General Managers

All

Please note below the email below with additional information and guidelines that were provided from the Gov office to the Agencies today.

Key points:

- The agencies are being asked to conduct their own searches: please let Jodi know if any agencies request assistance from DTMB/OA or if any other questions arise regarding what OA is able to assist them with.
- Due date for the agencies to notify the Gov office of when their searches will be completed is Tuesday
- DTMB is currently working to identify the custodians for our own searches - more information will be available on Tuesday.

Thank you for your time, please call with any questions. Have a great weekend.

Happy Friday All!

As you're aware, the Governor's Office Legal Team is working with the agencies to gather email and documentation related to the Flint Water crisis. Each agency was invited to a meeting last Wednesday afternoon to discuss the details around this FOIA project.

Please note the following updated information:

- The Governor's Office has asked each agency to perform their own searches on their email/repositories for all information pertaining to the Flint Water crisis.
- While the agencies may approach DTMB for assistance, we are under a tight timeframe and can't possibly assist every agency and every employee.
 - If the agency asks for DTMB assistance and you have internal resources available to assist (i.e. Client Specialist), please provide that assistance.
 - **If the agency needs assistance from OA** (i.e. due to a large quantity of email/documents or a large group of people) **please forward that request to Jodi Simon**. Also, please let the agency know that requests will be prioritized by the Governor's Office and we will provide feedback on availability as soon as possible (so if DTMB cannot assist, it will still leave time for the agency to perform the searches).
- The Governor's Office will provide the keyword search terms today to the Agencies.
 - The designated agency coordinators for this project will identify which employees from their agency will be the Custodians.

Please call me with any questions.

Thank you

Tiziana Galeazzi

Flint water subject of thousands of pages newly released by Gov. Snyder

MLive – February 12, 2016, By Dominic Adams

FLINT, MI -- Thousands of pages of emails, internal communications and other documents were released by Gov. Rick Snyder on Friday, Feb. 12.

The documents focus on materials and emails from the Michigan's Department of Environmental Quality, Department of Health and Human Services, Department of Treasury, Department of Technology, Management and Budget and Department of Agriculture and Rural Development in connection to Flint's water crisis.

Flint's water is currently in the national spotlight after elevated blood lead levels were discovered in some Flint children after the city changed its water source from Lake Huron water purchased from the Detroit water system to the Flint River in April 2014, a decision made while the city was being run by a state-appointed emergency manager.

State regulators never required that the river water be treated to make it less corrosive, causing lead from plumbing and pipes to leach into the water supply.

Even though the city reconnected to the Detroit water system in October, local officials have advised Flint residents not to drink city water unless they are using a lead-clearing filter.

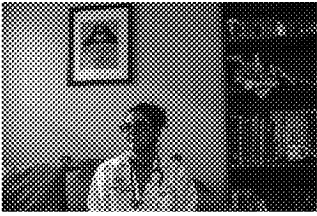

"All levels of government failed the people of Flint," Snyder said in a statement accompanying the release. "This crisis should never have happened, but we are making progress each day to meet the needs of residents.

"By making the information easily accessible, everyone can review it and take what they need, and then we can all focus and work together on solutions, healing and moving Flint forward."

The release does not include additional emails from the Governor's office that MLive has called on the governor to release. Snyder's office is exempt from the Freedom of Information Act.

Local health officials, in emails obtained by The Flint Journal through the Freedom of Information Act, alleged the governor and the DEQ withheld lead testing results, including results from Freeman Elementary School, while officials discussed the best way to present the information to the public.

Lead testing results delayed until after press conference, emails show

Flint schools did not receive water test results showing three of its buildings had high lead levels until roughly three hours after Gov. Rick Snyder and other state officials held a press conference on the issue, according to emails obtained by The Flint Journal.

The pediatrician who exposed rising blood lead levels in young children in Flint and the state of Michigan are separately investigating whether pregnant women who drank the city's tainted water had abnormally high miscarriage rates.

Possible lead exposure-miscarriage link probed in Flint water crisis

The Hurley Medical Center pediatrician who exposed rising blood lead levels in young children in the city and the state of Michigan are separately investigating whether pregnant women who drank Flint river water had abnormally high miscarriage rates as well.

Project Impact helps local runaway, homeless youth

Midland Daily News – February 12, 2016

Mid Michigan Community Action is launching a new program: Project Impact.

With funding from the Michigan Department of Health and Human Services, the program focuses on improving the lives of runaway and homeless youth in Bay and Arenac Counties through housing assistance and the coordination of services including case management, counseling and life skills training.

“With Project Impact we have the opportunity to create a brighter future for teenagers and young adults struggling with homelessness in mid-Michigan,” said Jill Sutton, executive director of Mid Michigan Community Action. “Our goal with the program is to provide participants with the support needed to establish a solid foundation upon which they build the rest of their lives.”

To be eligible for Project Impact individuals must:

- Be at risk of becoming or currently be a runaway or a homeless youth,
- Have not graduated high school,
- Be between the ages of 12 and 20,
- Currently be in Bay or Arenac Counties.

Once in the program, a homeless youth resource specialist becomes the youth’s advocate and point of contact. A service plan, tailored to their specific situation and needs, guides the path to self-sufficiency.

Initial efforts will focus on a change from homeless status to settled. The first choice is reunification, if possible. When reunification is not feasible or appropriate, depending on a participant’s age they will be placed into a host home approved by Adoption Option, Inc. or will be provided assistance with obtaining housing. After housing has been established, participants will receive additional support outlined in their custom service plan.

State health agency asks Genesee to halt test charges

The Detroit News – February 13, 2016, By Chad Livengood

The Michigan Department of Health and Human Services on Friday asked the Genesee County Health Department to stop its laboratory from charging low-income Flint residents for testing their blood for potential toxic lead.

Department Director Nick Lyon said the state wants to cover the cost of the \$36 tests for any adult or child in Flint who doesn't have health insurance or whose insurer doesn't cover tests for lead in their bloodstream.

"Please suspend immediately any requirement for out-of-pocket payment," Lyon wrote in a letter to Genesee County health officer Mark Valacak.

A private laboratory under contract had been directly billing patients from Flint who came to get their blood tested for lead in light of the city's lead-contaminated water, said Geralyn Lasher, deputy director for external communication at the Department of Health and Human Services.

The state health department had heard complaints from Flint residents about the direct billing for the blood tests, prompting Lyon to issue his letter Friday, Lasher said.

"We said 'We don't want that to happen. We want to make sure we're covering the cost,'" Lasher said.

State health officials have encouraged Flint residents to get their blood tested for lead, while stressing the importance for homeowners to have their tap water tested for lead.

The state health department is providing any Flint resident with free water testing kits as well as faucet filters and bottled water while the city's drinking water remains unsafe to drink unfiltered.

The Centers for Disease Control and Prevention wants all Flint children under age six to have their blood tested for lead by April 1. Lead poisoning causes permanent brain damage to children, affecting their behavior and ability to learn.

Valacak could not be reached for comment Friday.

The Genesee County Health Department was closed Friday for a mandatory employee furlough that was paired with the President's Day holiday on Monday.

Higher penalties push uninsured to Obamacare

Oakland Press – February 12, 2016, By Charles Crumm

Dr. Shakil Khan, president of the Multicultural Council of America in Clinton Township, is a Certified Navigator, helping to shepherd the uninsured to health coverage under the Affordable Care Act, more commonly called Obamacare.

At a recent outreach event in Lake Orion, most of the people who attended were concerned about rising tax penalties for those who don't have health insurance, he said.

“It has a huge impact,” Khan said. “Most of them came because of the penalty clause.”

The penalties for people who don’t have health insurance on the rise, to \$695 per adult or 2.5 percent of household income, whichever is higher. There are no waivers as there have been the past two years.

That means someone without health insurance who makes more than \$27,800 a year would face the 2.5 percent of household income penalty.

The regular enrollment period ended Jan. 31, and early numbers from the U.S. Department of Health and Human Services indicates 345,813 in Michigan have insurance through the federal health exchange, an increase of more than 20,000.

Michigan is among eight states that saw a significant increase in health insurance enrollment in the federal exchange between Nov. 1 and Feb. 1, according to the federal government. The others are New York, Illinois, Kentucky, Florida, Colorado, Arizona and California.

The federal government offers subsidized health insurance through online markets like HealthCare.gov for people who don’t have access to employer-based coverage. Some states operate their own health exchanges. There’s also an expansion of Medicaid aimed at low-income adults above the poverty level in 31 states, including Michigan.

But virtually all Americans are required to have coverage or risk paying fines to the IRS. The health law calls the penalty the Individual Shared Responsibility Payment.

Enroll Michigan, part of a national health care enrollment coalition, said this is the first year since the law took effect in 2014 where people will face significant financial penalties if they don’t have health insurance.

“Anecdotally speaking, many of our network of navigators have said they see a lot more people who want to see what their options are because of the penalties,” Executive Director Dizzy Warren said.

As of last September, the federal government estimated that 6 percent of Michigan’s population was uninsured, about 600,000 people, compared to 9 percent nationally.

Warren said reducing the numbers of uninsured is a constant process of outreach and education, primarily through the federally-funded navigators and certified application counselors. Enroll Michigan has partnered with 300 organizations in Michigan to reach the uninsured.

“Almost 80 percent are eligible for some sort of financial assistance,” Warren said. “The more information that’s out, the more our numbers increase.”

Millennials Are Key

Key to the long-term success of the health care law is the participation of uninsured who are 34 years old and younger.

In Michigan, that group is 35 percent of all enrollees in the federal health insurance program. An estimated 24 percent of Michigan participants are ages 18-34.

“That’s the generation we want to insure more,” said Khan, at the Multicultural Council.

Khan said it’s also a difficult generation to reach when they’re faced with rising health premiums and generally good health.

“One young man told me he’d never been to the doctor so he saw no reason to have insurance,” Khan said. “To them, they argue it’s economic sense to pay the penalty rather than the insurance premium.

“The millennials have a different outlook on insurance than other generations,” Khan said. “They don’t see the benefit. It’s a very different attitude. It’s more like a luxury item to have insurance.”
